- nil or zero.
- amount too small to be expressed.
- preliminary figures.
- ⋆ revised figures.

## INTRODUCTION

This report is the eleventh of an annual series presenting estimated current revenue and expenditure of municipal governments in provincial aggregates. This compilation is on a basis consistent with the actual current (as opposed to "gross general" and "net general") revenue and expenditure presented in the publication "Municipal Government Finance" Catalogue No. 68-204, the latest issue of which is for the year 1964. In this report "preliminary" data is provided for 1965 and 1966 and "estimated" data for 1967. The term "preliminary" is applied to data based on information contained in financial statements pertaining to municipal revenues and expenditures, while the term "estimated" is applied to data based on municipal budget information.

An analysis of debenture debt charges and estimated gross debenture debt issued and outstanding at the year end has again been included in provincial aggregate form for all provinces—this information however, was not available for Quebec, Yukon and Northwest Territories.

This report is more comprehensive than its predecessors in that it includes for the first time revenue and expenditure data for municipalities within the Yukon and Northwest Territories and also for municipalities within selected Census Metropolitan Areas. The latter is intended as a step toward meeting the growing demand for regional statistics which with further development might allow for specialty studies not feasible on a provincial aggregate basis. The ultimate goal is to present "gross general" revenues and expenditures, along with an analysis of current and capital grants, and debt transactions for all Census Metropolitan Areas and Major Urban Areas.

### Local Government Organization and Structure

Government in Canada may be said to comprise federal, provincial (and territorial), and local governments. Local government is defined by DBS as all government entities below the provincial level. The number of these entities is large, and their relationships with one another and with the other levels of government are extremely complex. An understanding of these relationships is essential for the interpretation of local government statistics.

Local government exists to provide services which constitutionally are the responsibilities of the provinces but which, in the latter's opinion, are best administered by organizations whose jurisdictions are confined to localities within the province. Because the constitution is permissive insofar as the establishment of "municipal institutions" by provincial governments is concerned, and because of the wide variations in tradition, history, development, and other determinants in each province, the

roles assigned to local government and the way it discharges those roles vary considerably, not only from province to province, but also between similar entities within a single province.

The Dominion Bureau of Statistics assigns local government entities to four principal categories—regional municipalities, local municipalities, school boards, and joint boards and commissions. There is a fifth category comprising enterprises, institutions, and special purpose boards which are usually the creations of regional and local municipalities; some of this fifth category however, may be provincial creations and, as such, be more or less independent of other local governments.

The financial statistics presented herein are for municipalities, both regional and local, and include other local government entities (a) to the extent to which they are financed by municipalities, and (b) as is required to approach, as near as possible, uniformity in coverage between provinces.

### Estimating Procedures

The estimates provided in this publication were obtained by projection of 1964 information as published in Municipal Government Finance, Catalogue No. 68-204.

The estimating procedures apply to all provinces except Quebec, where the source data used for projection was provided by the Quebec Bureau of Statistics. In the Yukon and Northwest Territories the organized municipalities were surveyed on a full coverage basis and the results were compiled without inflation.

Information obtained from a survey of a sample of municipalities was used to compute estimated provincial aggregates on a "preliminary" basis for 1966 and an "estimated" basis for 1967.

Composition of the sample varied from province to province to accommodate the peculiarities of local government structure in each province. Essentially the selection of municipalities to be surveyed was made within the grouping or classification in the departments of municipal affairs reports. First, the municipalities in the Census Metropolitan Areas were selected and grouped separately, secondly, the municipalities that were considered unique and neither representative of nor capable of being represented by others, were selected and also grouped separately. Finally from the remaining municipalities a sample was selected within each respective group. Municipalities selected prior to the sample selection are referred to as self-representative. Municipalities selected both on a self-representative basis and by application of sampling techniques are referred to as the sample municipalities.

Basically, the method of projection was to apply the percentage change in sample data from base to current year to the total data for the base year. This link or index of change was computed and applied for each item of revenue, expenditure etc. within each sample group. Because estimates were made for two years from the same base data, the formula was altered to enable the application of one ratio for each year's estimates as follows:

$$\frac{\text{Total (base)}}{\text{Sample (base)}} \times \text{Sample (current)} = \frac{\text{Estimate of}}{\text{total (current)}}$$

The estimates derived from data provided by those selected as sample municipalities were added to the estimates provided by the self-representing municipalities to arrive at projected revenue and expenditure comparable in scope to the department of municipal affairs base data. These estimates on a provincial aggregate basis were then adjusted to compensate for portions of local government not represented by the survey and also to make the estimates comparable in concept with the "actual" series as published for 1964.

### Limitations

Although the specific items of revenue and expenditure are common to nearly all municipalities, their relative significance within the financial structure of each municipality differs to varying degrees. As an example, towns of a comparable size in a given area might all have "real property tax" and "licences and permits" revenue. The proportion of these items of revenue to their respective total revenue could vary from one town to another within the group. One might expect that the proportion of "licences and permits" would be more variable. Therefore the sample representation varies between items of revenue and expenditure and the quality of the estimates varies accordingly. Items which form a stable proportion of revenue or expenditure for a sample group of municipalities have a higher degree of accuracy or reliability than others. This inadequacy of the sample to be totally representative was recognized and special attention was given during the compilation to minimize errors resulting from under-representation of this nature. Such errors of sampling vary from item to item. However the sample element forms only a part of the provincial total. Hence the error in the provincial total of a particular item is relatively insignificant.

### Current Revenue and Expenditure

Revenue and expenditure in provincial and territorial aggregates presented in Tables 1 and 2 show the three years of data for each province and territory as well as a total to enable the examination of trends. Detail for some provinces was not available or could not be obtained by the estimating procedures and such exceptions are indicated by symbols set forth in the flyleaf of this publication or by footnote.

The most significant year to year change occurred in New Brunswick in 1967 where the resumption of certain services by the provincial government resulted in the cessation of local government expenditures on health, welfare and education and a marked decline in debenture debt charges. This was offset by a substantial reduction in real property tax and in contributions from the Federal and Provincial governments, and the elimination of all taxes other than real property and business. All of these changes resulted from the recommendations of the "Programme for Equal Opportunity" implemented by the Government of New Brunswick on January 1, 1967.

As illustrated in the following summary tables of revenue and expenditure, in most instances increases occurred each year from 1963 to 1967 in all itemized classifications of current revenues and expenditures. Exceptions occurred with a slight decline in "special assessments" in 1966 offset by an increase in "other revenue". Although total revenues and expenditures showed a succession of increases, the rate of increase was irregular but within a narrow range and averaged almost eight per cent per year.

The percentage distribution tables illustrate the consistency of the relationship of the items of revenue and expenditure to their respective totals each year. Commencing in 1963, general taxation, as a proportion of total revenue, displays a declining trend to 1965 with increases in 1966 and 1967, while grants become increasingly important. Other sources of revenue and functions of expenditure, with the exception of "education" which rose slightly, increased at approximately the same rate as total revenues and expenditures.

Adjustments made to make the projected estimates conform in concept with the "actual" series included the addition of taxes levied by school boards and the inclusion of other local government entities not included nor represented by the survey, such as local improvement districts. Various sources and methods were used to determine the amount of these adjustments. In most instances projection of trend was employed, but where possible estimates prepared for other purposes were used, e.g. in British Columbia the taxation of school districts was obtained from the "Provincial Estimates" as published by the Government of British Columbia.

### Debenture Debt Charges

The analyses of debenture debt charges shown in Table 3 is a presentation of the charges relative to the gross debenture debt of local government. Charges relative to debentures issued for municipal and school purposes only, agree with the expenditure item "Debenture debt charges" in Table 2. Detail for this table was not available for Quebec and the Yukon and Northwest Territories. The resumption of local education by the province in New Brunswick is reflected in this table with the elimination of debenture debt charges for this purpose in 1967.

## Gross Debenture Debt

This table shows the estimated debt outstanding at December 31 for all debentures issued by local government with the exception of Quebec and the Yukon and Northwest Territories for which information was not available.

## Census Metropolitan Areas

The selection of Census Metropolitan Areas was based primarily on the availability of information. If the core city or a significant component of the C.M.A. did not respond to the survey or provide adequate information, the C.M.A. was omitted from this report. Also, where major changes occurred in the composition of the C.M.A. during the period under review, the C.M.A. was omitted. For example, reorganization of local government and resumption of certain services by the Province in New Brunswick, which came into effect on January 1, 1967 with the implementation of the "Programme for Equal Opportunity", prevented the inclusion of the C.M.A. of Saint John.

Current revenue and expenditure of municipalities in Census Metropolitan Areas are shown in aggregate for a selection of C.M.A.'s in Tables 5

and 6. The amounts and relative proportions for each C.M.A. as well as for the aggregate of C.M.A.'s in each province are shown alongside the respective provincial aggregates.

So far as possible C.M.A. information is presented on a basis consistent with the respective provincial aggregate. Exceptions to this consistency are noted by footnotes to the tables, e.g. "Joint expenditure" and "Contribution—other municipalities". The unorganized portion was omitted and where only a part of a municipality was included for population presentation, the decision to include the entire municipality for this presentation was based on the proportion of population within the C.M. If more than fifty per cent of the population of municipality was included within a C.M.A. then the entire municipality was included for presentation of municipal finance statistics. An exception was made to include only the Ontario portion of the C.M.A. of Ottawa. Information for the municipalities in Quebec was not available.

The selected C.M.A.'s and their constituent municipalities showing the 1966 population of each, and the proportions of C.M.A.'s populations to their respective provincial totals, follow:

	Population		Proportion of provincial total (per cent)
<b>Province of Ontario .....</b>		<b>6,960,870</b>	<b>100.00</b>

### SYMBOLS

The following standard symbols are used in Dominion Bureau of Statistics publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- amount too small to be expressed.
- Ⓟ preliminary figures.
- Ⓡ revised figures.

**Note:** In this publication the terms "province" and "provincial" include "territory" and "territorial" unless the sense clearly indicates otherwise.

# INTRODUCTION

This report is the twelfth of an annual series presenting estimated revenues, expenditures and debt of municipal governments in provincial and territorial aggregates. This presentation differs from previous years in that estimated revenues and expenditures, formerly presented on a "current" basis, are now shown on a "gross" basis for the first time; and the arrangement of items differs in order to present "Total revenue from own sources" and "Cost of services provided". The present series has been extended further to show in separate tables "Conditional transfers from other governments" classified by function.

Census Metropolitan Area aggregates were introduced last year for a selection of 13 CMAs. This series has been expanded to include 17 CMAs and 15 Census Major Urban Areas, representing all such regions except those in the Province of Quebec for which the required detail was not available.

This report has therefore been extended in both scope and depth of detail: in scope to conform with gross revenue and expenditure as presented for the other levels of government, and in depth of detail in keeping with our intent to meet the growing demand for regional statistics.

An analysis of debenture debt charges and estimated gross debenture debt outstanding at the year end, has again been included in provincial aggregate form; this information, however, was not available for Quebec, Yukon and the Northwest Territories.

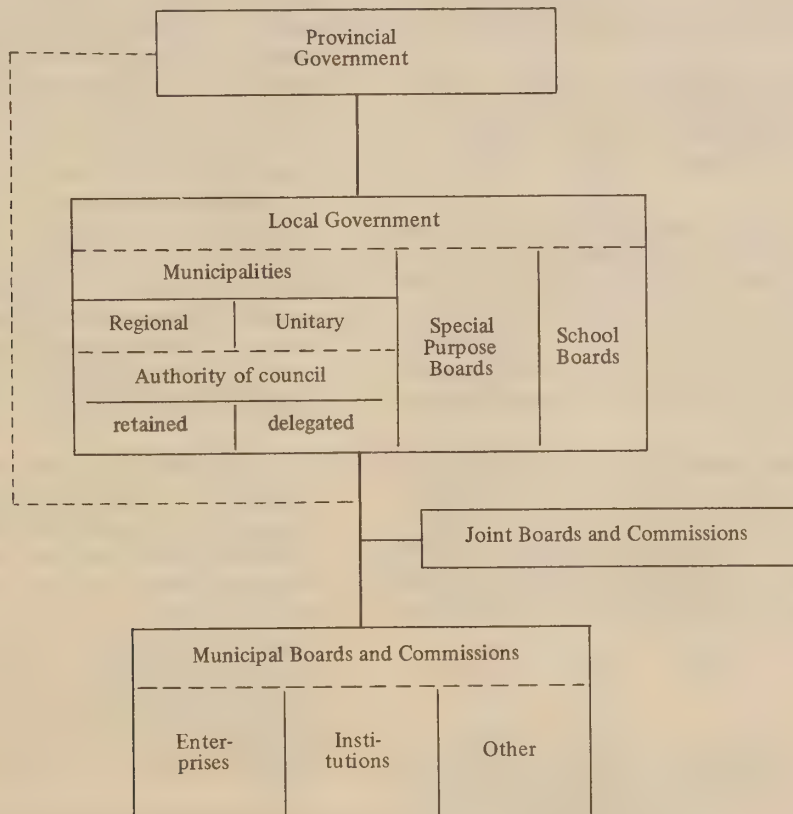

## Local Government Organization and Structure

Government in Canada is comprised of three tiers—federal, provincial or territorial, and local. Whereas, for statistical purposes, distinction between the federal and provincial levels is clear-cut, that between the provincial and local is less well defined. "Local government" is defined by DBS as all government entities below the

provincial level. The number of these entities is large, and their relationships with one another and with their respective provincial governments are extremely complex. An understanding of these relationships is essential for the interpretation of local government statistics.

Local government exists to provide services which constitutionally are the responsibilities of the provinces but which, in the latter's opinion, are best administered by organizations whose jurisdictions are confined to localities within the province. Because the constitution is permissive insofar as the establishment of "municipal institutions" by provincial governments is concerned, and because of the wide variations in tradition, history, development, and other determinants in each province, the roles assigned to local government and the way it discharges those roles vary considerably, not only from province to province, but also between similar entities within a single province.

The Dominion Bureau of Statistics assigns local government entities to three principal categories (as illustrated in the diagram below) — municipalities, special purpose boards and local school boards. Municipalities, whether regional or unitary may delegate authority to a joint board or create boards or commissions which DBS classifies as enterprise, institutional or other. Special purpose boards are also created by the provincial government to provide services of a local nature to areas which usually embrace more than one municipality; examples are regional library boards, conservation authorities, etc. School boards are closely allied to municipalities in that, in many instances a large part of the financing is provided through the municipality and, in some cases, the school board is formed from a committee of council. Although the quality and quantity of service provided by school boards is controlled by the provincial government, there is a strong local element of administration; DBS therefore considers school boards as a major component of local government.

The financial statistics presented herein are for municipalities and joint boards in their entirety; the remaining municipal boards, special purpose boards and school boards are included to the extent to which they are financed by municipalities. Also to maintain uniformity, as near as possible, between provinces and to adhere to the concept of "gross revenue" and "gross expenditure (cost of services provided)" capital expenditures and relative provincial grants are included for municipalities, school boards and for special purpose boards that could be identified.

### Estimating Procedures

The estimates presented as "Preliminary" for 1967 and "Estimates" for 1968 in this publication were obtained by projection of 1966 information as published in "Municipal Government Finance — Actual" Catalogue No. 68-204 on the trends established by survey.

The estimating procedure was used for all provinces except Quebec, where survey data was not available and projection of trend from prior years was used.

Municipalities included in the survey were selected on the basis of two criteria.

- (1) Municipalities considered unique and therefore not representative were selected to be surveyed on a full coverage basis. This group included all municipalities in Census Metropolitan and Major Urban Areas, most remaining cities, and other municipalities which constituted extremes during the process of forming homogeneous groups prior to sample selection.
- (2) The remaining municipalities were grouped essentially by type of corporation (cities, towns, villages etc.) within each province with some groups subdivided into size strata where required. From these homogeneous groups sample municipalities were selected on a random basis with representation weighted by the proportion of the group to the respective provincial aggregate of total expenditures.

Basically, the method of projection was to apply the percentage change in sample data from base to current year to the total data for the base year. This link or index of change was computed and applied for each item of revenue, expenditure etc. within each sample group.

The estimates derived from data provided by those selected as sample municipalities were added to the estimates provided by the self-representing municipalities to arrive at projected revenue and expenditure comparable in scope to the Department of Municipal Affairs base data. These estimates on a provincial aggregate basis were then adjusted to compensate for portions of local government not represented by the survey and also to make the estimates comparable in concept with the "actual" series as published for 1966.

Capital expenditures were derived from the same survey, but a different estimating technique was employed. Although the same sample composition was observed, the estimates derived from sample municipalities were tempered by supporting information respecting capital expenditure programmes and works contract data — that is, due to the high degree of variability of capital expenditures, the sample element of the survey was subject to errors, especially between functions.

### Limitations

Although the specific items of revenue and expenditure are common to nearly all municipalities, their relative significance within the financial structure of each municipality differs to varying degrees. As an example, towns of a comparable size in a given area might all have "real property tax" and "licences and permits" revenue. The proportion of these items of revenue to their respective

total revenue could vary from one town to another within the group — indeed, it might be expected that the proportion of "licences and permits" would vary significantly. Therefore, the sample representation varies between items of revenue and expenditure and the quality of the estimates varies accordingly. Items which form a stable proportion of revenue or expenditure for a sample group of municipalities have a higher degree of accuracy or reliability than others. This inadequacy of the sample to be totally representative was recognized and special attention was given during the compilation to minimize errors resulting from under-representation of this nature. Such errors of sampling vary from item to item; however, the sample element forms only a part of the provincial total and hence the error in the provincial total of a particular item is relatively insignificant.

### Gross Revenue and Expenditure

The "Gross" concept is employed in the presentation of statistics in this publication for the first time to conform with the publications for the other levels of government and the "Municipal Government Finance — Actual" Catalogue No. 68-204. Gross revenue includes all revenue regardless of source; gross expenditure (or cost of services provided) includes all current and capital expenditures without duplication. To avoid duplication in the calculation of gross expenditure, outlays for the acquisition of fixed assets are reflected at the point in time at which the fixed asset is acquired rather than when any loan in this respect is repaid (municipal accounting conventions treat the repayment of long-term loans as an expenditure in the year in which revenue is provided for this purpose). Also, as the "gross" presentation constitutes a consolidation of the "current" and "capital" funds, the current expenditure item "contributions to the capital and loan fund" is eliminated as an inter-fund transfer.

Gross revenue in this publication includes all current revenue of all municipalities and the net contributions from their boards, together with capital grants from other levels of government respecting all capital expenditures of municipalities and their boards (except enterprises), special purpose boards and school boards. Gross expenditure was compiled to include current and capital expenditures without duplication including the same coverage of the local government universe as the revenue. Because school boards and municipal boards are included only to the extent of their financing by municipalities, the revenues are understated by the amount of relevant transfers to these entities from other levels of government and to a lesser extent by other incidental forms of revenue. This apparent gap in the municipal series respecting school boards, however, disappears upon consolidation with the provincial series presented in "Provincial Government Finance" Catalogue No. 68-205. Such provincial-municipal consolidations provide the only basis on which meaningful inter-provincial comparisons can be made. The consolidated series is presented in the publication "Consolidated Government Finance" Catalogue No. 68-202.

Continuity with the actual series for both scope in coverage and consistency of classification was maintained wherever possible, to reflect the true trend in the estimates for 1967 and 1968. A few difficulties were experienced, such as the estimates of "Protection of persons and property" for Ontario. In this instance, while the survey reflected the resumption of the "administration of justice" by the provincial government in 1968, some inconsistency in reporting was noted. During the period of transition, the provincial government reimbursed municipalities for costs incurred and these payments were treated as costs recovered and netted against expenditures by some municipalities, whereas others treated them as grants or rental revenue. Improvement in coverage such as the availability of capital expenditures of conservation authorities in Ontario for 1967 and 1968 also contributed to a slight break in continuity.

Improved reporting and estimating techniques enabled the identification and presentation of "Business tax" for Ontario and Saskatchewan municipalities for all three years covered in this

publication. This tax is more dominant in the larger urban municipalities, and improved survey coverage plus improved reporting by respondents resulted in the need to estimate for only a minor portion of each respective provincial aggregate.

Capital expenditures for the acquisition of land were classified in "Other expenditures - Other", as they were not identifiable by function in the source material, and because they could be applicable to "Recreation and community service" as well as "Public works" or various forms of urban redevelopment programmes.

### Debenture Debt Charges

The analyses of debenture debt charges shown in Table 3 is a presentation of the charges relative to the gross debenture debt of local government. The interest portion, relative to debentures issued for municipal and school purposes only, agrees with the expenditure item "Debt charges - Debenture Interest" in Table 2. Resumption of the responsibility for education at the local level by the government of the Province of New Brunswick is reflected in this table with the elimination of debenture debt charges for this purpose in 1967.

Totals . . . . .	100	100	100	100	100

<sup>1</sup> For the above analysis only estimates for Quebec have been included for "Taxation for school purposes" and "Education" expenditure for 1965 and Education capital grants for 1964 and 1965, to avoid distortion.

## Gross Debenture Debt

Table 5 shows the estimated debt outstanding at December 31 for all debentures issued by local government with the exception of Quebec and the Yukon and Northwest Territories for which information was not available.

## Conditional Transfers from Federal and Provincial Governments

Conditional transfers from other levels of government, comprising grants-in-aid and shared-cost contributions of both a current and capital nature, are presented in provincial aggregate form by function. The presentation conforms both in scope and detail with that shown for prior years in the publication "Municipal Government Finance - Actual" Catalogue No. 68-204. Some difficulty was experienced in the allocation of grants identifiable by programme rather than by function. Provincial grants for "Winter Works" are included in "Public Works", but other grants which could not be identified as being predominantly for only one function but were nevertheless conditional are included in "Other Expenditure - Other". Examples of such multi-function grants are

grants made under "The Municipal Aid Act" of British Columbia, as well as those under "The Municipal Services Act" of Nova Scotia. Improved data for conditional grants in Ontario enabled the presentation of additional data for 1967 and 1968 which accounts for the substantial increase in the total for these years. An additional break in continuity occurs where capital expenditures for hospitals were included for 1967 and 1968, but information on the relative capital grants was not available.

## Census Metropolitan and Major Urban Areas

Where only a portion of a municipality was included for Census of Canada Population Statistics, the decision to include such municipalities in this compilation was based on the proportion of population within the CMA or CMUA. If more than 50 per cent of the population of such a municipality was within the CMA or CMUA, then the entire municipality was included in this presentation. An exception was made to present only the Ontario portion of the CMA of Ottawa as information for the relative municipalities in Quebec was not available.

Similarly the decision respecting the inclusion of school boards in the CMA and CMUA compilations where boundaries were not coterminous was based on the determination of those boards, the area of which most closely conformed to the CMA and CMUA boundaries.

So far as possible CMA and CMUA gross revenue and expenditure is presented on a basis consistent with the provincial aggregates. Exceptions to this consistency occur where (a) inter-municipal transfers can be almost entirely eliminated on consolidation for the provincial aggregate but only partially eliminated in the CMA or CMUA aggregate — e.g., county rates in Ontario. As contributions from other municipalities are included in "Other revenue" it is possible for the CMA and CMUA aggregates to exceed the provincial aggregate with a contra situation in the expenditure item "Other expenditures — special projects" where joint expenditures are presented.

Where adjustments were required to provincial aggregate data to offset known bias in the estimates, a comparable adjustment was made to the CMA and CMUA data on a judgment basis.

In some instances conditional grants were available only in provincial aggregate form (such as Municipal Development and Loan Funds contributions) and are therefore omitted from the CMA and CMUA compilations resulting in an understatement of the ratio to provincial aggregate. This situation is accentuated in Ontario where provincial grants to conservation authorities are shown in the provincial aggregate only, in the item "Provincial grants — Other".

The CMAs and CMUAs and their constituent municipalities, showing the 1966 Census population figures for each and the proportions to their respective provincial totals follow: Municipalities included in this compilation are denoted by an "x" in the last column.

### SYMBOLS

The following standard symbols are used in Dominion Bureau of Statistics publications:

- .. figures not available.
- .. figures not appropriate or not applicable.
- nil or zero.
- amount too small to be expressed.
- p preliminary figures.
- r revised figures.

**Note:** In this publication the terms "province" and "provincial" include "territory" and "territorial" unless the sense clearly indicates otherwise.

# INTRODUCTION

This report is the thirteenth of an annual series presenting estimated revenues, expenditures and debt of local governments in provincial and territorial aggregates. Over the years the series has developed thereby enabling a more comprehensive presentation of results. Two years ago territorial aggregates and selected Census Metropolitan Area statistics were introduced. Last year the series was extended and gross expenditures were presented on a new format to show "revenue from own sources" and "cost of services provided"; the functional classification of conditional grants were introduced and the Census Metropolitan Area presentation extended and Census Major Urban Area aggregates introduced. This year the financial statistics of school boards are included in their entirety whereas in prior years they were included only to the extent of their financing by municipalities. Waterworks are included for the first time as an integral part of the general services provided by municipal government following a review of the definition of government general, as opposed to government enterprise, thereby conforming with the concept of government employed in the recent historically revised series of the System of National Accounts. Also the presentation of Census Metropolitan Area and Major Urban Area statistics is now complete with the inclusion of all CMAs and CMUAs within the Province of Quebec. To increase the usefulness of the statistics, detail of "Other revenue" as shown in total in Table 1 is now presented in Table 5.

Over the past few years this report has been extended substantially both in scope and depth of detail, and now conforms with the gross revenue and expenditure as presented for the other levels of government.

An analysis of debenture debt charges and estimated gross debenture debt outstanding at the year end, has again been included in provincial aggregate form; this information, however, was not available for Quebec, Yukon and the Northwest Territories.

## Local Government Organization and Structure

Government in Canada is comprised of three tiers—federal, provincial or territorial, and local. Whereas, for statistical purposes, distinction between the federal and provincial levels is clear-cut, that between the provincial and local is less well defined. "Local government" is defined by DBS as all government entities below the provincial level. The number of these entities is large, and their relationships with one another and with their respective provincial governments are extremely complex. An understanding of these relationships is essential for the interpretation of local government statistics.

Local government exists to provide services which constitutionally are the responsibility of the provinces but which, in the latter's opinion, are best administered by organizations whose jurisdictions are confined to localities within the province. Because the constitution is permissive insofar as the establishment of "municipal institutions" by provincial governments is concerned, and because of the wide variations in tradition, history, development, and other determinants in each province, the roles assigned to local government and the way it discharges these roles vary considerably, not only from province to province, but also between similar entities within a single province.

Similarly, while all provinces provide financial assistance to their local government entities, such assistance can vary widely. In fact, because of the differing financial arrangements existing among the three levels of government in each province and especially because of the divergences in allocation of responsibilities between provincial and local levels from province to province, true interprovincial comparability can only be achieved after a process of integration of government and government enterprise operations at each level followed by a consolidation of operations at both levels. Consolidated statements of provincial and local government statistics for each province may be obtained by adding together the gross revenue and expenditure data for the two levels of government, subject to adjustments for conditional and unconditional grants. Specifically, the amounts of conditional and unconditional grants to

local government shown as expenditures of provincial governments must be offset against the amounts of provincial conditional and unconditional grants shown as revenue of local governments. Because of differences in fiscal year-ends and accounting practices, amounts shown as having been paid by one level of government to another will differ from those shown as having been received.

Consolidations of provincial-local as well as federal-provincial-local revenues and expenditures are compiled in the DBS publication "Consolidated Government Finance, 1967", Catalogue No. 68-202. Provincial government financial data for the fiscal year ended March 31, 1968 is available in the publication "Provincial Government Finance, Revenue and Expenditure, 1967", Catalogue No. 68-207. The Federal Government financial data for the fiscal year ended March 31, 1968 is available in the publication "Federal Government Finance, Revenue and Expenditure, 1967", Catalogue No. 68-211.

The Dominion Bureau of Statistics assigns local government entities to three principal categories (as illustrated in the diagram below)—municipalities, special purpose boards and local school boards. Municipalities, whether regional or unitary may delegate authority to a joint board or create boards or commissions which DBS classifies as enterprise, institutional or other. Quasi-municipalities, administered by provincially-appointed boards or commissions, are regarded as municipalities because they provide limited municipal services to areas that would otherwise be considered unorganized territory. Special purpose boards are also created by the provincial government to provide services of a local nature to areas which usually embrace more than one municipality; examples are regional library boards, conservation authorities, etc. School boards are closely allied to municipalities in that, in many instances, a large part of the financing is provided through the municipality and, in some cases, the school board is formed from a committee of council. Although the quality and quantity of service provided by school boards is controlled by the provincial government, there is a strong local element of administration; DBS therefore considers school boards as a major component of local government.

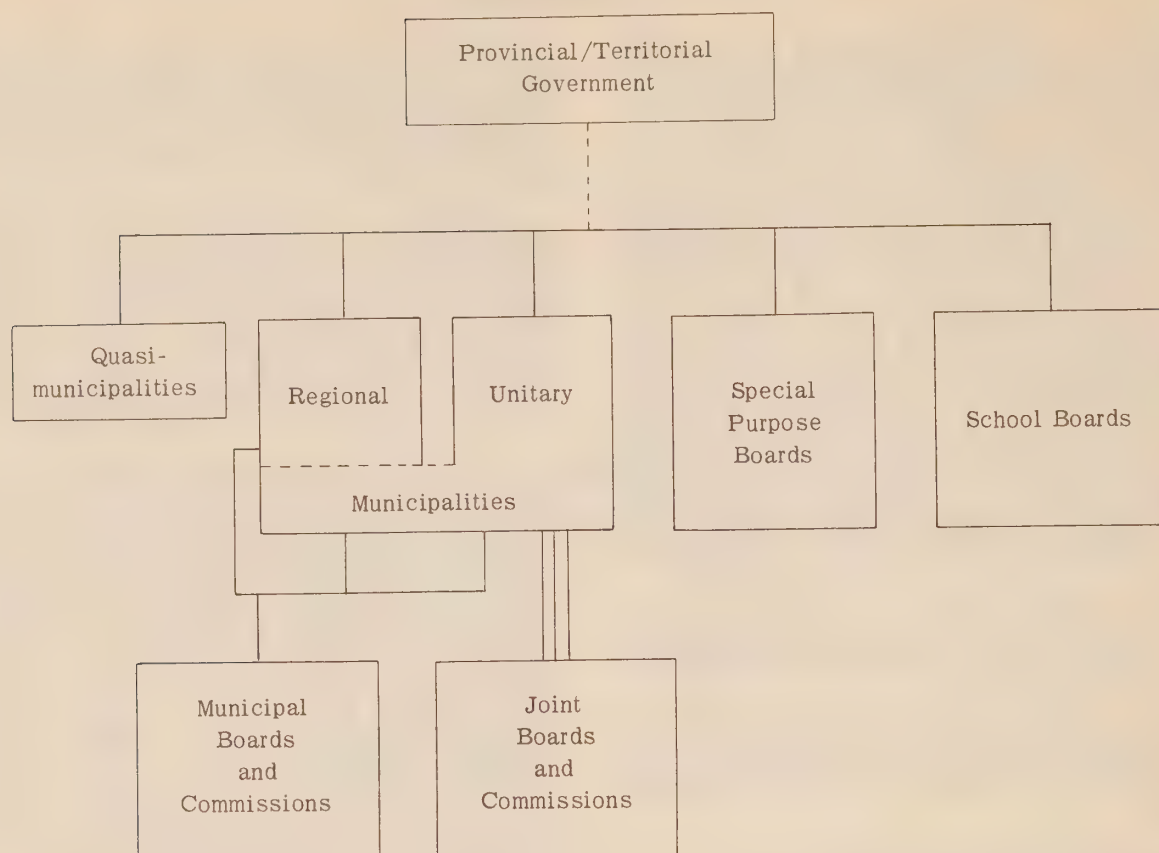

The financial statistics presented herein are for municipalities (including waterworks), school boards and joint boards in their entirety; the remaining municipal boards, and special purpose boards are included to the extent to which they are financed by municipalities. Also to maintain uniformity, as near as possible, between provinces and to adhere to the concept of "gross revenue" and "gross expenditure (cost of services provided)", capital expenditures and relative provincial grants are included for municipalities, school boards and for special purpose boards that could be identified.

## Estimating Procedures

The estimates presented as "Preliminary" for 1968 and "Estimates" for 1969 in this publication were obtained by projection of 1967 information as published in "Local Government Finance—Actual" Catalogue No. 68-204 on the trends established by survey.

Municipalities included in the survey were selected on the basis of two criteria.

- (1) Municipalities considered unique and therefore not representative were selected to be surveyed on a full coverage basis. This group included all municipalities in Census Metropolitan and Major Urban Areas, most remaining cities, and other municipalities which constituted extremes during the process of forming homogeneous groups prior to sample selection.
- (2) The remaining municipalities were grouped essentially by type of corporation (cities, towns, villages etc.) within each province with some groups subdivided into size strata where required. From these homogeneous groups sample municipalities were selected on a random basis with representation weighted by the proportion of the group to the respective provincial aggregate of total expenditures.

Basically, the method of projection was to apply the percentage change in sample data from base to current year to the total data for the base year. This link or index of change was computed and applied for each item of revenue, expenditure etc. within each sample group.

The estimates derived from data provided by those selected as sample municipalities were added to the estimates provided by the self-representing municipalities to arrive at projected revenue and expenditure comparable in scope to the Department of Municipal Affairs base data. These estimates on a provincial aggregate basis were then adjusted to compensate for portions of local government not represented by the survey and also to make the estimates comparable in concept with the "actual" series as published for 1967.

Capital expenditures were derived from the same survey, but a different estimating technique was employed. Although the same sample composition was observed, the estimates derived from sample municipalities were tempered by supporting information respecting capital expenditure programmes and works contract data — that is, due to the high degree of variability of capital expenditures, the sample element of the survey was subject to errors, especially between functions.

#### Limitations

Although the specific items of revenue and expenditure are common to nearly all municipalities, their relative significance within the financial structure of each municipality differs to varying degrees. As an example, towns of a comparable size in a given area might all have "real property tax" and "licences and permits" revenue. The proportion of these items of revenue to their respective total revenue could vary from one town to another within the group — indeed, it might be expected that the proportion of "licences and permits" would vary significantly. Therefore, the sample representation varies between items of revenue and expenditure and the quality of the estimates varies accordingly. Items which form a stable proportion of revenue or expenditure for a sample group of municipalities have a higher degree of accuracy or reliability than others. This inadequacy

of the sample to be totally representative was recognized and special attention was given during the compilation to minimize errors resulting from under-representation of this nature. Such errors of sampling vary from item to item; however, the sample element forms only a part of the provincial total and hence the error in the provincial total of a particular item is relatively insignificant.

#### Gross Revenue and Expenditure

The "Gross" concept is employed in the presentation of statistics in this publication to conform with the publications for the other levels of government and the "Local Government Finance — Actual" Catalogue No. 68-204. Gross revenue includes all revenue regardless of source; gross expenditure (or cost of services provided) includes all current and capital expenditures without duplication. To avoid duplication in the calculation of gross expenditure, outlays for the acquisition of fixed assets are reflected at the point in time at which the fixed asset is acquired rather than when any loan in this respect is repaid (municipal accounting conventions treat the repayment of long-term loans as an expenditure in the year in which revenue is provided for this purpose). Also, as the "gross" presentation constitutes a consolidation of the "current" and "capital" funds, the current expenditure item "contributions to the capital and loan fund" is eliminated as an inter-fund transfer.

Gross revenue in this publication includes all current revenue of all municipalities (including waterworks) school boards and the net contributions from municipal boards, together with capital grants from other levels of government respecting all capital expenditures of municipalities and their boards (except enterprises), special purpose boards and school boards. Gross expenditure was compiled to include current and capital expenditures without duplication including the same coverage of the local government universe as the revenue. Because municipal boards are included only to the extent of their financing by municipalities, the revenues are understated by the amount of relevant transfers to these entities from other levels of government and to a lesser extent by other incidental forms of revenue

Most provinces provide some form of tax relief to the homeowner and, as in Ontario, the tenant. In this statistical presentation such payments are considered as payments to the homeowner or tenant by the provincial government and administered through the municipal offices, and therefore not a reduction of municipal tax revenue nor a municipal revenue grant from the province.

Continuity with the actual series for both scope in coverage and consistency of classification was maintained wherever possible, to reflect the true trend in the estimates for 1968 and 1969.

Improved reporting and estimating techniques enabled the identification and presentation of "Business tax" for Ontario and Saskatchewan municipalities for all three years covered in this publication. This tax is more dominant in the larger urban municipalities, and improved survey coverage plus improved reporting by respondents resulted in the need to estimate for only a minor portion of each respective provincial aggregate.

Capital expenditures for the acquisition of land were classified in "Other expenditures - Other", as they were not identifiable by function in the source material, and because they could be applicable to "Recreation and community service" as well as "Public works" or various forms of urban redevelopment programmes.

#### Debenture Debt Charges

The analysis of debenture debt charges shown in Table 3 is a presentation of the charges relative to the gross debenture debt of local government. The interest portion, relative to debentures issued for municipal and school purposes only, agrees with the expenditure item "Debt charges - Debenture Interest" in Table 2. Resumption of the responsibility for education at the local level by the government of the Province of New Brunswick is reflected in this table with the elimination of debenture debt charges for this purpose for all three years as the change was effective January 1, 1967.

#### Gross Debenture Debt

Table 6 shows the estimated debt outstanding at December 31 for all debentures issued by local government with the exception of Quebec and the Yukon and Northwest Territories for which information was not available.

#### Conditional Transfers from Federal and Provincial Governments

Conditional transfers from other levels of government, comprising grants-in-aid and shared-cost contributions of both a current and capital nature, are presented in provincial aggregate form by function. The presentation conforms both in scope and detail with that shown for prior years in the publication "Local Government Finance - Actual" Catalogue No. 68-204. Some difficulty was experienced in the allocation of grants identifiable by programme rather than by function. Provincial grants for "Winter works" are included in "Public works", but other grants which could not be identified as being predominantly for only one function but were nevertheless conditional are

included in "Conditional Transfers - Other". Examples of such multi-function grants are those made under "The Municipal Aid Act" of British Columbia, as well as those under "The Municipal Services Act" of Nova Scotia. Improved data for conditional grants in Ontario enabled the presentation of additional data for 1968 and 1969 which accounts for the substantial increase in the total for these years. An additional break in continuity occurs where capital expenditures for hospitals were included for 1968 and 1969, but information on the relative capital grants was not available.

#### Census Metropolitan and Major Urban Areas

Where only a portion of a municipality was included for Census of Canada Population Statistics, the entire municipality was included in this presentation. An exception was made to present the Ontario and Quebec portions of the CMA of Ottawa in their respective provinces for purposes of comparison with provincial aggregates, otherwise both parts are combined in the Ontario CMA presentations.

Similarly the decision respecting the inclusion of school boards in the CMA and CMUA compilations where boundaries were not coterminous was based on the determination of those boards, the area of which most closely conformed to the CMA and CMUA boundaries. Provincial grants to these school boards and their current expenditures were allocated provincially on a per capita basis. Similar treatment was accorded the estimated capital expenditures in Quebec.

So far as possible CMA and CMUA gross revenue and expenditure is presented on a basis consistent with the provincial aggregates. Exceptions to this consistency occur where inter-municipal transfers can be almost entirely eliminated on consolidation for the provincial aggregate but only partially eliminated in the CMA or CMUA aggregate - e.g., county rates in Ontario. As contributions from other municipalities are included in "Other revenue" it is possible for the CMA and CMUA aggregates to exceed the provincial aggregate with a contra situation in the expenditure item "Other expenditures - Special projects" where joint expenditures are presented.

Where adjustments were required to provincial aggregate data to offset known bias in the estimates, a comparable adjustment was made to the CMA and CMUA data on a judgment basis.

In some instances conditional grants were available only in provincial aggregate form (such as Municipal Development and Loan Funds contributions) and are therefore omitted from the CMA and CMUA compilations resulting in an understatement of the ratio to provincial aggregate. This situation is accentuated in Ontario where provincial grants to conservation authorities are shown in the provincial aggregate only, in the item "Provincial grants - Other".

The CMAs and CMUAs and their constituent municipalities, showing the 1966 Census population figures for each and the proportions to their respective provincial totals follow: Municipalities included in this compilation are denoted by an "x" in the last column.

## SYMBOLS

The following standard symbols are used in Dominion Bureau of Statistics publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- amount too small to be expressed.
- p preliminary figures.
- r revised figures.

**Note:** In this publication the terms "province" and "provincial" include "territory" and "territorial" unless the sense clearly indicates otherwise.

# INTRODUCTION

This report is the fourteenth of an annual series presenting estimated revenues, expenditures and debt of local governments in provincial and territorial aggregates. Over the years the series has developed, thereby enabling a more comprehensive presentation of results. Three years ago territorial aggregates and selected Census Metropolitan Area statistics were introduced. A year later the series was extended and gross expenditures were presented on a new format to show "revenue from own sources" and "cost of services provided"; the functional classification of conditional grants was introduced and the Census Metropolitan Area presentation extended and Census Major Urban Area aggregates introduced. Last year the financial statistics of school boards were included in their entirety whereas in prior years they were included only to the extent of their financing by municipalities; and waterworks were included for the first time as an integral part of the general services provided by municipal government. Also last year, the presentation of Census Metropolitan Area and Major Urban Area statistics was completed with the inclusion of all CMAs and CMUAs within the Province of Quebec, and for the first time detail of "Other revenue" as shown in total in Table 1 was presented in Table 5.

Over the past few years this report has been extended substantially both in scope and depth of detail, and as of last year conforms with the gross revenue and expenditure as presented for the other levels of government.

An analysis of debenture debt charges and estimated gross debenture debt outstanding at the year end, has again been included in provincial aggregate form; this information, however, was not available for Quebec, Yukon and the Northwest Territories.

## Local Government Organization and Structure

Government in Canada is comprised of three tiers—federal, provincial or territorial, and local. Whereas, for statistical purposes, distinction between the federal and provincial levels is clear-cut, that between the provincial and local is less well defined. "Local government" is defined by DBS as all government entities below the provincial level. The number of these entities is large, and their relationships with one another and with their respective provincial governments are extremely complex. An understanding of these relationships is essential for the interpretation of local government statistics.

Local government exists to provide services which constitutionally are the responsibility of the provinces but which, in the latter's opinion, are best administered by organizations whose jurisdictions are confined to localities within the province. Because the constitution is permissive insofar as the establishment of "municipal institutions" by provincial governments is concerned, and because of the wide variations in tradition, history, development, and other determinants in each province, the roles assigned to local government and the way it discharges these roles vary considerably, not only from province to province, but also between similar entities within a single province.

Similarly, while all provinces provide financial assistance to their local government entities, such assistance can vary widely. In fact, because of the differing financial arrangements existing among the three levels of government in each province and especially because of the divergences in allocation of responsibilities between provincial and local levels from province to province, true interprovincial comparability can only be achieved after a process of integration of government and government enterprise operations at each level followed by a consolidation of operations at both levels. Consolidated statements of provincial and local government statistics for each province may be obtained by adding together the gross revenue and expenditure data for the two levels of government, subject to adjustments for conditional and unconditional grants. Specifically, the amounts of conditional and unconditional grants to

local government shown as expenditures of provincial governments must be offset against the amounts of provincial conditional and unconditional grants shown as revenue of local governments. Because of differences in fiscal year-ends and accounting practices, amounts shown as having been paid by one level of government to another will differ from those shown as having been received.

Consolidations of provincial-local as well as federal-provincial-local revenues and expenditures are compiled in the DBS publication "Consolidated Government Finance, 1968", Catalogue No. 68-202. Provincial government financial data for the fiscal year ended March 31, 1969 is available in the publication "Provincial Government Finance, Revenue and Expenditure, 1968", Catalogue No. 68-207. The Federal Government financial data for the fiscal year ended March 31, 1969 is available in the publication "Federal Government Finance, Revenue and Expenditure, 1968", Catalogue No. 68-211.

The Dominion Bureau of Statistics assigns local government entities to three principal categories (as illustrated in the diagram below)—municipalities, special purpose boards and local school boards. Municipalities, whether regional or unitary may delegate authority to a joint board or create boards or commissions which DBS classifies as enterprise, institutional or other. Quasi-municipalities, administered by provincially-appointed boards or commissions, are regarded as municipalities because they provide limited municipal services to areas that would otherwise be considered unorganized territory. Special purpose boards are also created by the provincial government to provide services of a local nature to areas which usually embrace more than one municipality; examples are regional library boards, conservation authorities, etc. School boards are closely allied to municipalities in that, in many instances, a large part of the financing is provided through the municipality and, in some cases, the school board is formed from a committee of council. Although the quality and quantity of service provided by school boards is controlled by the provincial government, there is a strong local element of administration; DBS therefore considers school boards as a major component of local government.

The financial statistics presented herein are for municipalities (including waterworks), school boards and joint boards in their entirety; the remaining municipal boards, and special purpose boards are included to the extent to which they are financed by municipalities. Also to maintain uniformity, as near as possible, between provinces and to adhere to the concept of "gross revenue" and "gross expenditure (cost of services provided)", capital expenditures and relative provincial grants are included for municipalities, school boards and for special purpose boards that could be identified.

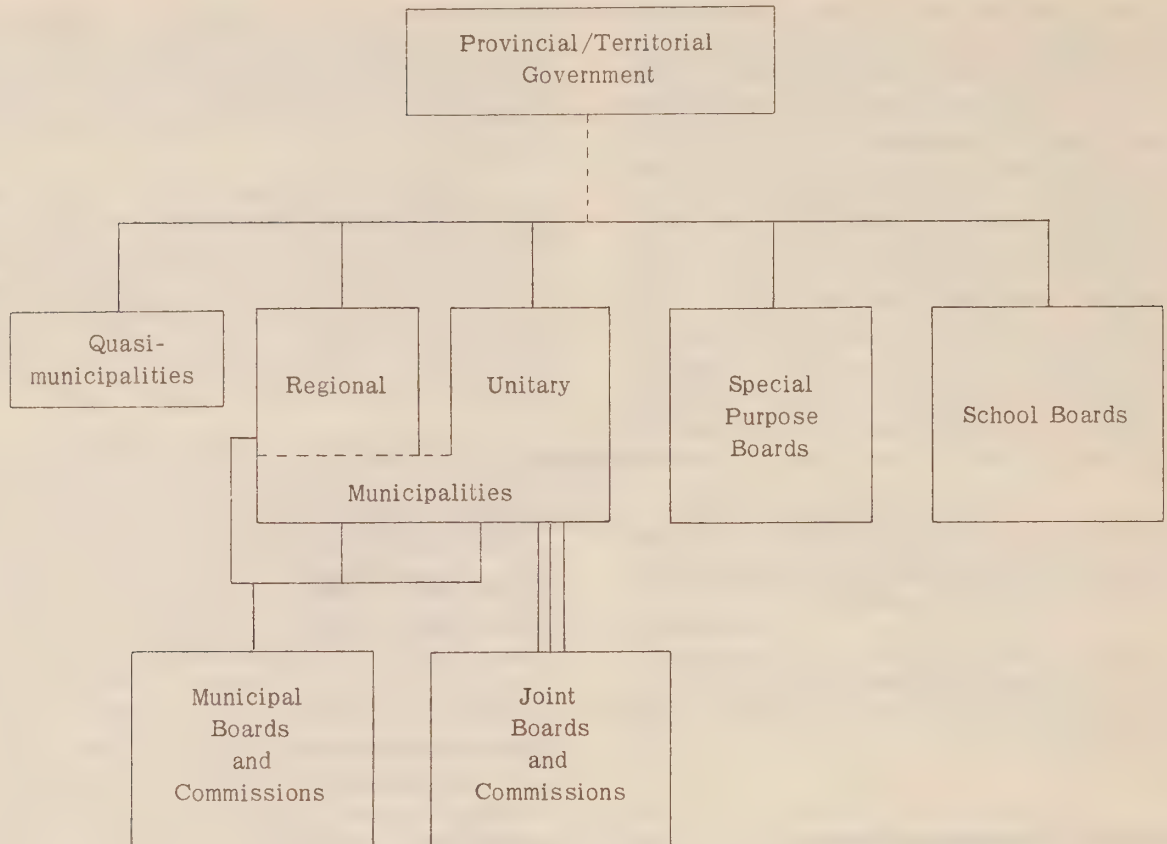

## Estimating Procedures

The estimates presented as "Preliminary" for 1969 and "Estimates" for 1970 in this publication were obtained by projection of 1968 information as published in "Local Government Finance—Actual" Catalogue No. 68-204 on the trends established by survey.

Municipalities included in the survey were selected on the basis of two criteria.

- (1) Municipalities considered unique and therefore not representative were selected to be surveyed on a full coverage basis. This group included all municipalities in Census Metropolitan and Major Urban Areas, most remaining cities, and other municipalities which constituted extremes during the process of forming homogeneous groups prior to sample selection.
- (2) The remaining municipalities were grouped essentially by type of corporation (cities, towns, villages etc.) within each province with some groups subdivided into size strata where required. From these homogeneous groups sample municipalities were selected on a random basis with representation weighted by the proportion of the group to the respective provincial aggregate of total expenditures.

## The Structure of Local Government in Canada

Basically, the method of projection was to apply the percentage change in sample data from base to current year to the total data for the base year. This link or index of change was computed and applied for each item of revenue, expenditure etc. within each sample group.

The estimates derived from data provided by those selected as sample municipalities were added to the estimates provided by the self-representing municipalities to arrive at projected revenue and expenditure comparable in scope to the Department of Municipal Affairs base data. These estimates on a provincial aggregate basis were then adjusted to compensate for portions of local government not represented by the survey and also to make the estimates comparable in concept with the "actual" series as published for 1968.

Capital expenditures were derived from the same survey, but a different estimating technique was employed. Although the same sample composition was observed, the estimates derived from sample municipalities were tempered by supporting information respecting capital expenditure programmes and works contract data - that is, due to the high degree of variability of capital expenditures, the sample element of the survey was subject to errors, especially between functions.

### Limitations

Although the specific items of revenue and expenditure are common to nearly all municipalities, their relative significance within the financial structure of each municipality differs to varying degrees. As an example, towns of a comparable size in a given area might all have "real property tax" and "licences and permits" revenue. The proportion of these items of revenue to their respective total revenue could vary from one town to another within the group - indeed, it might be expected that the proportion of "licences and permits" would vary significantly. Therefore, the sample representation varies between items of revenue and expenditure and the quality of the estimates varies accordingly. Items which form a stable proportion of revenue or expenditure for a sample group of municipalities have a higher degree of accuracy or reliability than others. This inadequacy

of the sample to be totally representative was recognized and special attention was given during the compilation to minimize errors resulting from under-representation of this nature. Such errors of sampling vary from item to item; however, the sample element forms only a part of the provincial total and hence the error in the provincial total of a particular item is relatively insignificant.

### Gross Revenue and Expenditure

The "Gross" concept is employed in the presentation of statistics in this publication to conform with the publications for the other levels of government and the "Local Government Finance - Actual" Catalogue No. 68-204. Gross revenue includes all revenue regardless of source; gross expenditure (or cost of services provided) includes all current and capital expenditures without duplication. To avoid duplication in the calculation of gross expenditure, outlays for the acquisition of fixed assets are reflected at the point in time at which the fixed asset is acquired rather than when any loan in this respect is repaid (municipal accounting conventions treat the repayment of long-term loans as an expenditure in the year in which revenue is provided for this purpose). Also, as the "gross" presentation constitutes a consolidation of the "current" and "capital" funds, the current expenditure item "contributions to the capital and loan fund" is eliminated as an inter-fund transfer.

Gross revenue in this publication includes all current revenue of all municipalities (including waterworks) school boards and the net contributions from municipal boards, together with capital grants from other levels of government respecting all capital expenditures of municipalities and their boards (except enterprises), special purpose boards and school boards. Gross expenditure was compiled to include current and capital expenditures without duplication including the same coverage of the local government universe as the revenue. Because municipal boards are included only to the extent of their financing by municipalities, the revenues are understated by the amount of relevant transfers to these entities from other levels of government and to a lesser extent by other incidental forms of revenue.

Most provinces provide some form of tax relief to the homeowner and, as in Ontario, the tenant. In this statistical presentation such payments are considered as payments to the homeowner or tenant by the provincial government and administered through the municipal offices, and therefore not a reduction of municipal tax revenue nor a municipal revenue grant from the province.

Continuity with the actual series for both scope in coverage and consistency of classification was maintained wherever possible, to reflect the true trend in the estimates for 1969 and 1970. Improved information for water works caused some of the difference from the data published last year for 1968 and 1969.

Improved reporting and estimating techniques enabled the identification and presentation of "Business tax" for Ontario and Saskatchewan municipalities for all three years covered in this publication. This tax is more dominant in the larger urban municipalities, and improved survey coverage plus improved reporting by respondents resulted in the need to estimate for only a minor portion of each respective provincial aggregate.

Conservation Authorities in Ontario, formerly classified as "Other expenditure" are now included in "Protection to persons and property" in accordance with recent reconsideration of the nature of service they provide.

Capital expenditures for the acquisition of land were formerly classified in "Other expenditures—Other", as they were not identifiable by function in the source material. This year, because the bulk of such expenditures are attributable to roads, land purchase costs were classified as "Public works".

#### Debenture Debt Charges

The analysis of debenture debt charges shown in Table 3 is a presentation of the charges relative to the gross debenture debt of local government. The interest portion, relative to debentures issued for municipal and school purposes only, agrees with the expenditure item "Debt charges—Debenture Interest" in Table 2. Resumption of the responsibility for education at the local level by the government of the Province of New Brunswick is reflected in this table with the elimination of debenture debt charges for this purpose for all three years as the change was effective January 1, 1967.

#### Gross Debenture Debt

Table 6 shows the estimated debt outstanding at December 31 for all debentures issued by local government with the exception of Quebec and the Yukon and Northwest Territories for which information was not available.

#### Conditional Transfers from Federal and Provincial Governments

Conditional transfers from other levels of government, comprising grants-in-aid and shared-cost contributions of both a current and capital nature, are presented in provincial aggregate form by function. The presentation conforms both in scope and detail with that shown for prior years in the publication "Local Government Finance—Actual" Catalogue No. 68-204. Some difficulty was experienced in the allocation of grants identifiable by programme rather than by function. Provincial grants for "Winter works" are included in "Public works", as are grants under "The Municipal Aid Act" of British Columbia (considered to be predominately for roads) but other grants which could not be identified as being predominantly for only one function but were nevertheless conditional are included in "Conditional Transfers—Other". An example of such a multi-function grant is that made under "The Municipal Services

Act" of Nova Scotia. Capital expenditures for hospitals were again included, but information on the relative capital grants is still not available.

#### Census Metropolitan and Major Urban Areas

Where only a portion of a municipality was included for Census of Canada Population Statistics, the entire municipality was included in this presentation. An exception was made to present the Ontario and Quebec portions of the CMA of Ottawa in their respective provinces for purposes of comparison with provincial aggregates; otherwise both parts are combined in the Ontario CMA presentations. With the formation of the Regional Municipality of Ottawa-Carleton and the Regional Municipality of Niagara, it has been necessary to extend the Census definition of Metropolitan Area to accommodate all local entities within the regional boundaries. The extended coverage is indicated in the list of municipalities comprising the CMAs and CMUAs included in this publication.

Similarly the decision respecting the inclusion of school boards in the CMA and CMUA compilations where boundaries were not coterminous was based on the determination of those boards, the area of which most closely conformed to the CMA and CMUA boundaries. Provincial grants to these school boards and their current expenditures were allocated provincially on a per capita basis. Similar treatment was accorded the estimated capital expenditures in Quebec.

So far as possible CMA and CMUA gross revenue and expenditure is presented on a basis consistent with the provincial aggregates. Exceptions to this consistency occur where inter-municipal transfers can be almost entirely eliminated on consolidation for the provincial aggregate but only partially eliminated in the CMA or CMUA aggregate—e.g., county rates in Ontario. As contributions from other municipalities are included in "Other revenue" it is possible for the CMA and CMUA aggregates to exceed the provincial aggregate with a contra situation in the expenditure item "Other expenditures—Special projects" where joint expenditures are presented.

Where adjustments were required to provincial aggregate data to offset known bias in the estimates, a comparable adjustment was made to the CMA and CMUA data on a judgment basis.

In some instances conditional grants were available only in provincial aggregate form (such as Municipal Development and Loan Funds contributions) and are therefore omitted from the CMA and CMUA compilations resulting in an understatement of the ratio to provincial aggregate. This situation is accentuated in Ontario where provincial grants to conservation authorities are shown in the provincial aggregate only, in the item "Provincial grants—Protection to persons and property". Also in Table 12, the detail respecting the federal conditional transfers was insufficient to enable presentation of meaningful ratios except in total. Provincial conditional transfers shown in the CMA, CMUA columns is partially lacking in detail in some instances. Where this occurs the ratio in the item "Other" may approach or exceed 100 in which case the ratios for one or more of the specified items is understated.

The CMAs and CMUAs and their constituent municipalities, showing the 1966 Census population figures for each and the proportions to their respective provincial totals follow: Municipalities included in this compilation are denoted by an "x" in the last column.

### SYMBOLS

The following standard symbols are used in Statistics Canada publications.

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- amount too small to be expressed.
- p preliminary figures.
- r revised figures.

**Note:** In this publication the terms "province" and "provincial" include "territory" and "territorial" unless the sense clearly indicates otherwise.

# INTRODUCTION

This report is the fifteenth of an annual series presenting estimated revenues and expenditures of local governments in provincial and territorial aggregates. Over the years the series has developed, thereby enabling a more comprehensive presentation of results. In the report covering 1966 preliminary and 1967 estimates, territorial aggregates and selected Census Metropolitan Area statistics were introduced. In the following year the CMA presentation was extended and the Census Major Urban Area aggregates introduced. In addition the functional classification of conditional grants was introduced, and estimated revenues and expenditures were presented on a new format to show "revenue from own sources", and "cost of services provided". In the report covering 1968 preliminary and 1969 estimates the financial statistics of school boards were included in their entirety, whereas in prior years they were included only to the extent of their financing by municipalities; and waterworks were included for the first time as an integral part of the general services provided by municipal government. As well, the presentation of Census Metropolitan Area and Major Urban Area statistics was finalized with the inclusion of all CMAs and CMUAs within the Province of Quebec.

Over the past few years the report has been extended substantially both in scope and depth of detail, and now conforms with the gross revenue and expenditure as presented for other levels of government.

## Local Government Organization and Structure

Government in Canada is comprised of three tiers—federal, provincial or territorial, and local. Whereas, for statistical purposes, distinction between the federal and provincial levels is clear-cut, that between the provincial and local is less well defined. "Local government" is defined by Statistics Canada as all government entities below the provincial level. The number of these entities is large, and their relationships with one another and with their respective provincial governments are extremely complex. An understanding of these relationships is essential for the interpretation of local government statistics.

Local government exists to provide services which constitutionally are the responsibility of the provinces but which, in the latter's opinion, are best administered by organizations whose jurisdictions are confined to localities within the province. Because the constitution is permissive insofar as the establishment of "municipal institutions" by provincial governments is concerned, and because of the wide variations in tradition, history, development, and other determinants in each province, the roles assigned to local government and the way it discharges these roles vary considerably, not only from province to province, but also between similar entities within a single province.

Similarly, while all provinces provide financial assistance to their local government entities, such assistance can vary widely. In fact, because of the differing financial arrangements existing among the three levels of government in each province and especially because of the divergences in allocation of responsibilities between provincial and local levels from province to province, true interprovincial comparability can only be achieved after a process of integration of government and government enterprise operations at each level followed by a consolidation of operations at both levels. Consolidated statements of provincial and local government statistics for each province may be obtained by adding together the gross revenue and expenditure data for the two levels of government, subject to adjustments for conditional and unconditional grants. Specifically, the amounts of conditional and unconditional grants to local government shown as expenditures of provincial governments must be offset against the amounts of provincial conditional and unconditional grants shown as revenue of local governments. Because of differences in fiscal year-ends and accounting practices, amounts shown as having been paid by one level of government to another will differ from those shown as having been received.

Consolidations of provincial-local, as well as federal-provincial-local revenues and expenditures are compiled in the Statistics Canada publication *Consolidated Government Finance, 1969*, Catalogue 68-202. Provincial government financial data for the fiscal year ended March 31, 1970 is available in the publication *Provincial Government Finance, Revenue and Expenditure 1969*, Catalogue 68-207. Federal government financial data for the fiscal year ended March 31, 1970 is available in the publication *Federal Government Finance, Revenue and Expenditure 1969*, Catalogue 68-211.

Statistics Canada assigns local government entities to three principal categories (as illustrated in the following diagram) — municipalities, special purpose boards and local school boards. Municipalities, whether regional or unitary may delegate authority to a joint board or create boards or commissions which Statistics Canada classifies as enterprise, institutional or other. Quasi-municipalities, administered by provincially-appointed boards or commissions, are regarded as municipalities because they provide limited municipal services to areas that would otherwise be considered unorganized territory. Special purpose boards are also created by the provincial government to provide services of a local nature to areas which usually embrace more than one municipality; examples are regional library boards, conservation authorities, etc. School boards are closely allied to municipalities in that, in many instances, a large part of the financing is provided through the municipality and, in some cases, the school board is formed from a committee of council. Although the quality and quantity of service provided by school boards is controlled by the provincial government, there is a strong local element of administration; DBS therefore considers school boards as a major component of local government.

The financial statistics presented herein are for municipalities (including waterworks), school boards and joint boards in their entirety; the remaining municipal boards, and special purpose boards are included to the extent to which they are financed by municipalities. Also to maintain uniformity, as near as possible, between provinces and to adhere to the concept of "gross revenue" and "gross expenditure (cost of services provided)", capital expenditures and relative provincial grants are included for municipalities, school boards and for special purpose boards that could be identified.

In the main the data in this report refers to the calendar year, but in a few cases it has been necessary to use the financial period nearest to December 31.

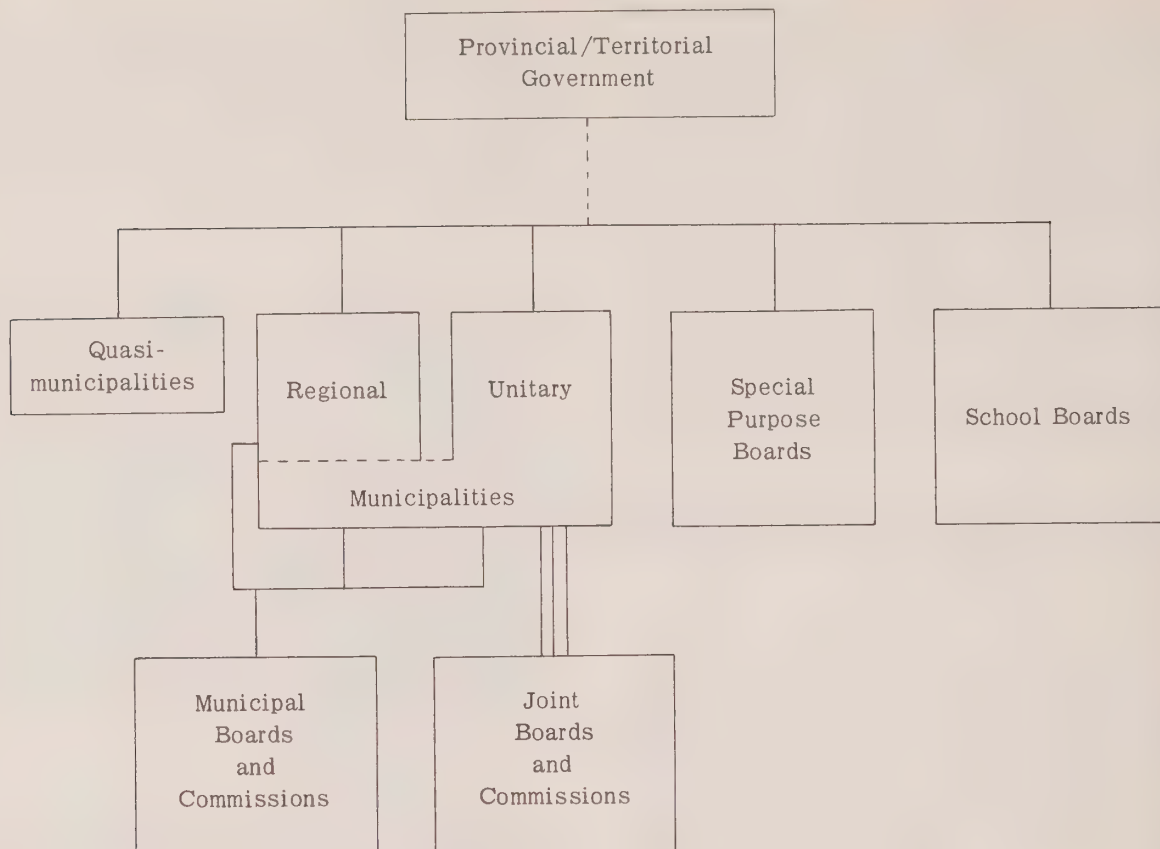

## Estimating Procedures

The estimates presented as "Preliminary" for 1969 and 1970, and "Estimates" for 1971 in this publication were obtained by projection of 1968 information as published in *Local Government Finance—Actual*, Catalogue 68-204 on the trends established by survey.

Municipalities included in the survey were selected on the basis of two criteria.

- (1) Municipalities considered unique and therefore not representative were selected to be surveyed on a full coverage basis. This group included all municipalities in Census Metropolitan and Major Urban Areas, most remaining cities, and other municipalities which constituted extremes during the process of forming homogeneous groups prior to sample selection.
- (2) The remaining municipalities were grouped essentially by type of corporation (cities, towns, villages etc.) within each province with some groups subdivided into size strata where required. From these homogeneous groups sample municipalities were selected on a random basis with representation weighted by the proportion of the group to the respective provincial aggregate of total expenditures.

## The Structure of Local Government in Canada

Basically, the method of projection was to apply the percentage change in sample data from base to current year to the total data for the base year. This link or index of change was computed and applied for each item of revenue, expenditure etc. within each sample group.

The estimates derived from data provided by those selected as sample municipalities were added to the estimates provided by the self-representing municipalities to arrive at projected revenue and expenditure comparable in scope to the Department of Municipal Affairs base data. These estimates on a provincial aggregate basis were then adjusted to compensate for portions of local government not represented by the survey and also to make the estimates comparable in concept with the "actual" series as published for 1968.

Capital expenditures were derived from the same survey, but a different estimating technique was employed. Although the same sample composition was observed, the estimates derived from sample municipalities were tempered by supporting information respecting capital expenditure programmes and works contract data — that is, due to the high degree of variability of capital expenditures, the sample element of the survey was subject to errors, especially between functions.

### Limitations

Although the specific items of revenue and expenditure are common to nearly all municipalities, their relative significance within the financial structure of each municipality differs to varying degrees. As an example, towns of a comparable size in a given area might all have "real property tax" and "licences and permits" revenue. The proportion of these items of revenue to their respective total revenue could vary from one town to another within the group — indeed, it might be expected that the proportion of "licences and permits" would vary significantly. Therefore, the sample representation varies between items of revenue and expenditure and the quality of the estimates varies accordingly. Items which form a stable proportion of revenue or expenditure for a sample group of municipalities have a higher degree of accuracy or reliability than others. This inadequacy

of the sample to be totally representative was recognized and special attention was given during the compilation to minimize errors resulting from under-representation of this nature. Such errors of sampling vary from item to item; however, the sample element forms only a part of the provincial total and hence the error in the provincial total of a particular item is relatively insignificant.

### Gross Revenue and Expenditure

The "Gross" concept is employed in the presentation of statistics in this publication to conform with the publication for the other levels of government and the "Local Government Finance — Actual" Catalogue No. 68-204. Gross revenue includes all revenue regardless of source; gross expenditure (cost of services provided) includes all current and capital expenditures without duplication. To avoid duplication in the calculation of gross expenditure, outlays for the acquisition of fixed assets are reflected at the point in time at which the fixed asset is acquired rather than when any loan in this respect is repaid (municipal accounting conventions treat the repayment of long-term loans as an expenditure in the year in which revenue is provided for this purpose). Also, as the "gross" presentation constitutes a consolidation of the "current" and "capital funds, the current expenditure item "contributions to the capital and loan fund" is eliminated as an inter-fund transfer.

Gross revenue in this publication includes all current revenue of all municipalities (including waterworks) school boards and the net contributions from municipal boards, together with capital grants from other levels of government respectively all capital expenditures of municipalities and their boards (except enterprises), special purpose boards and school boards. Gross expenditure was compiled to include current and capital expenditures without duplication including the same coverage of the local government universe as the revenue. Because municipal boards are included only to the extent of their financing by municipalities, the revenues are understated by the amount of relevant transfers to these entities from other levels of government and to a lesser extent by other incidental forms of revenue.

Most provinces provide some form of tax relief to the homeowner and, as in Ontario, to the tenant. In this statistical presentation such payments are considered as payments to the homeowner or tenant by the provincial government and administered through the municipal offices, and therefore not a reduction of municipal tax revenue nor a municipal revenue grant from the province.

Continuity with the actual series for both scope in coverage and consistency of classification was maintained wherever possible, to reflect the true trend in the estimates for 1970 and 1971.

Improved reporting and estimating techniques enabled the identification and presentation of "Business tax" for Ontario and Saskatchewan municipalities for all three years covered in this publication. This tax is more dominant in the larger urban municipalities, and improved survey coverage plus improved reporting by respondents resulted in the need to estimate for only a minor portion of each respective provincial aggregate.

Conservation Authorities in Ontario, formerly classified as "Other expenditure" are for 1970 and 1971 included in "Protection to persons and property" in accordance with recent reconsideration of the nature of service they provide.

Capital expenditures for the acquisition of land were formerly classified in "Other expenditures—Other", as they were not identifiable by function in the source material. In 1970 and 1971, because the bulk of such expenditures are attributable to roads, land purchase costs were classified as "Public works".

#### Debenture Debt Charges

The analysis of debenture debt charges shown in Table 3 is a presentation of the charges relative to the gross debenture debt of local government. The interest portion, relative to debentures issued for municipal and school purposes only, agrees with the expenditure item "Debt charges—Debenture Interest" in Table 2. Resumption of the responsibility for education at the local level by the government of the Province of New Brunswick is reflected in this table with the elimination of debenture debt charges for this purpose for all three years as the change was effective January 1, 1967.

#### Conditional Transfers from Federal and Provincial Governments

Conditional transfers from other levels of government, comprising grants-in-aid and shared-cost contributions of both a current and capital nature, are presented in provincial aggregate form by function. The presentation conforms both in scope and detail with that shown for prior years in the publication "Local Government Finance—Actual" Catalogue No. 68-204. Some difficulty was experienced in the allocation of grants identifiable by programme rather than by function. Provincial grants for "Winter works" are included in "Public works", as are grants under "The Municipal Aid Act" of British Columbia (considered to be predominately for roads) but other grants which could not be identified as being predominantly for only one function but were nevertheless conditional are included in "Conditional Transfers—Other". An example of such a multi-function grant is that made under "The Municipal Services Act" of Nova Scotia. Capital expenditures for hospitals were again included, but information on the relative capital grants is still not available.

#### Census Metropolitan and Major Urban Areas

Where only a portion of a municipality was included for Census of Canada Population Statistics, the entire municipality was included in this presentation. An exception was made to present the Ontario and Quebec portions of the CMA of Ottawa in their respective provinces for purposes of comparison with provincial aggregates; otherwise both parts are combined in the Ontario CMA presentations. With the formation of the Regional Municipality of Ottawa-Carleton and the Regional Municipality of Niagara, it has been necessary to extend the Census definition of Metropolitan Area to accommodate all local entities within the regional boundaries. The extended coverage is indicated in the list of municipalities comprising the CMAs and CMUAs included in this publication.

Similarly the decision respecting the inclusion of school boards in the CMA and CMUA compilations where boundaries were not coterminous was based on the determination of those boards, the area of which most closely conformed to the CMA and CMUA boundaries. Provincial grants to these school boards and their current expenditures were allocated provincially on a per capita basis. Similar treatment was accorded the estimated capital expenditures in Quebec.

So far as possible CMA and CMUA gross revenue and expenditure is presented on a basis consistent with the provincial aggregates. Exceptions to this consistency occur where inter-municipal transfers can be almost entirely eliminated on consolidation for the provincial aggregate but only partially eliminated in the CMA or CMUA aggregate—e.g., county rates in Ontario. As contributions from other municipalities are included in "Other revenue" it is possible for the CMA and CMUA aggregates to exceed the provincial aggregate with a contra situation in the expenditure item "Other expenditures—Special projects" where joint expenditures are presented.

Where adjustments were required to provincial aggregate data to offset known bias in the estimates, a comparable adjustment was made to the CMA and CMUA data on a judgment basis.

In some instances conditional grants were available only in provincial aggregate form (such as Municipal Development and Loan Funds contributions) and are therefore omitted from the CMA and CMUA compilations resulting in an understatement of the ratio to provincial aggregate. This situation is accentuated in Ontario where provincial grants to conservation authorities are shown in the provincial aggregate only, in the item "Provincial grants—Protection to persons and property". Also in Table 12, the detail respecting the federal conditional transfers was insufficient to enable presentation of meaningful ratios except in total. Provincial conditional transfers shown in the CMA, CMUA columns is partially lacking in detail in some instances. Where this occurs the ratio in the item "Other" may approach or exceed 100 in which case the ratios for one or more of the specified items is understated.

The CMAs and CMUAs and their constituent municipalities, showing the 1966 Census population figures for each and the proportions to their respective provincial totals follow: Municipalities included in this compilation are denoted by an "x" in the last column.

While population figures are based on 1966 Census, changes in census area groupings have been made to accommodate certain organizational changes notably those of the regional municipalities in Ontario.

## INTRODUCTION

This report is the sixteenth in an annual series presenting estimated revenue and expenditure of local governments. For a variety of reasons actual data on local government financial transactions cannot be produced until some considerable time after the year to which they apply. This interim report, therefore, presents more up to date information than is available in the companion publication *Local Government Finance, Actual*, Catalogue 68-204.

The 16 years during which these reports have been issued have witnessed a multitude of changes in the roles assigned to local governments, in their structures and methods of operation, in the concepts and classifications governing their financial reporting and in their ability to report on their financial transactions. These developments have been reflected in this series of publications generally as they occurred since there was no point in time when all these major factors seemed likely to stabilize. The result is that there are many discontinuities within the series; some of the more important in recent years have been:

**1966 and 1967** — Revenue and expenditure data for municipalities within the Yukon and Northwest Territories and for municipalities within selected Census Metropolitan Areas were included for the first time.

**1967 and 1968** — Rearrangement of items to show revenue from own sources and cost of services provided was introduced. Estimated revenue and expenditure formerly presented on a "current" basis were now shown on a "gross" basis. The functional classification of conditional grants was introduced. The Census Metropolitan Area presentation was extended to 17 CMA's and data on Census Major Urban Areas introduced representing all regions except those in the Province of Quebec.

**1968 and 1969** — Financial statistics on school boards were included in their entirety, whereas in prior years they were included only to the extent of their financing by municipalities. Waterworks were included for the first time as an integral part of the general services provided by local government. Census Metropolitan Area and Major Urban Area statistics for those areas within the Province of Quebec were also included to complete this form of presentation. The substantial values previously shown as "other revenue", were presented in detail.

**1969 and 1970** — Capital expenditure of municipally owned hospitals were added as a preliminary first stage in the measurement of this activity.

Cette publication est la seizième d'une série annuelle sur les recettes et les dépenses estimatives des administrations locales. Pour diverses raisons, les données actuelles sur les transactions financières des administrations locales ne peuvent être présentées que longtemps après l'année qu'elles visent. Par conséquent, ce rapport provisoire présente davantage de renseignements à jour que ne le fait la publication complémentaire *Finances des administrations publiques locales. Chiffres réels*, catalogue 68-204.

Au cours des 16 années où l'on a publié ces rapports, on a constaté de nombreuses variations du rôle attribué aux administrations locales, de leurs structures et de leurs méthodes d'administration, des concepts et des classifications applicables à leurs rapports financiers, en même temps qu'évoluaient leur capacité à présenter leurs opérations financières. En général, ces variations ont été prises en compte dans la présente série à mesure qu'elles se produisaient puisqu'il semblait peu probable que ces facteurs importants se stabilisent à un moment donné. Il y a donc de nombreuses solutions de continuité dans la série; en voici quelques exemples parmi les plus importantes:

**1966 et 1967** — Les données des recettes et des dépenses pour les municipalités du Yukon et des Territoires du Nord-Ouest et pour certaines municipalités des régions métropolitaines de recensement ont été prises en compte pour la première fois.

**1967 et 1968** — On a réorganisé les rubriques de manière à indiquer les recettes de sources propres et le coût des services fournis. La présentation des recettes et des dépenses estimatives autrefois sur une base courante se fait désormais sur une base brute. On a introduit la classification fonctionnelle des subventions conditionnelles. La présentation par région métropolitaine du recensement est passée à 17 R.M.R. et les données sur des grandes agglomérations urbaines de recensement sont apparues, représentant toutes les régions à l'exception de celles de la province de Québec.

**1968 et 1969** — La statistique financière des conseils scolaires a été prise en compte intégralement alors que les années précédentes, les données figuraient uniquement dans la mesure où ces conseils étaient financés par les municipalités. Les services des eaux y sont apparus pour la première fois comme partie intégrante des services généraux fournis par les administrations locales. En outre, la statistique relative aux régions métropolitaines de recensement et aux grandes agglomérations urbaines de recensement a été complétée grâce à l'introduction de toutes les R.M.R. et des G.A.U.R. du Québec. Les montants importants présentés auparavant comme "autres recettes" sont désormais détaillés.

**1969 et 1970** — On a, comme première tentative de mesure de cette activité, ajouté les dépenses d'investissement des hôpitaux appartenant aux municipalités.

**1970 and 1971** — Tables of gross debenture debt outstanding were dropped from the presentation due to difficulties encountered in estimating. Data on this subject is, however, available in the companion publication *Local Government Finance — Actual*, Statistics Canada, Catalogue 68-204.

The current publication incorporates the concepts and classifications of local government and local government financial reporting described in *A Financial Information System for Municipalities*, Catalogue 12-532, 12-533 and 12-534. This publication, which resulted from the work of the Eighth Federal-Provincial Conference on Municipal Finance Statistics, was issued by Statistics Canada late in 1970 and replaces the *Municipal Finance Reporting Manual*, published a decade earlier, which formed the basis for previous editions of the current publication.

The classification systems incorporated in *A Financial Information System for Municipalities* show many differences from those in the earlier manual and the reader is advised to consult the new publication to become fully aware of the nature and extent of these changes since it is impractical to describe them in detail here.

It is recognized that the discontinuities mentioned above preclude the use of data in this publication, or its "Actual" companion, for the construction and analysis of time series of local government data. There are indications that the period of rapid change and development is passing and the Public Finance Division hopes to secure resources to permit the revision and updating of all financial statistics for all levels of government for the past decade. However these resources have not yet been acquired and, in addition, the revision process itself is likely to be a lengthy exercise; several years are likely to pass, therefore, before revised data can be made available.

Statistics Canada assigns local government entities to 3 principal categories — municipalities, special purpose boards and local school boards. Municipalities, whether regional or unitary may delegate authority to provide certain services to semi-autonomous boards or commissions which Statistics Canada classifies as enterprise, institutional or other. Frequently such boards will be the joint creations of a number of municipalities. Quasi-municipalities, administered by provincially-appointed boards or commissions, are regarded as municipalities because they provide limited municipal services to areas that would otherwise be considered unorganized territory. Special purpose boards are also created by provincial governments to provide services of a local nature to areas which usually embrace more than one municipality; examples are

**1970 et 1971** — On ne présente plus les tableaux de frais du service de la dette obligataire non garantie en cours à cause des difficultés d'estimation. On peut toutefois se procurer des données sur ce sujet dans la publication complémentaire *Finances des administrations publiques locales. Chiffres réels*, catalogue 68-204F.

La publication courante offre les concepts et les classifications des administrations locales et les rapports financiers des administrations locales décrits dans les publications *Système d'information financière à l'usage des corporations municipales*, catalogue 12-532F, 12-533F, 12-534F. Cette publication de Statistique Canada, qui est le résultat du travail de la huitième conférence fédérale provinciale sur la statistique des finances municipales, est parue à la fin de 1970 et remplace le *Municipal Finance Reporting Manual*, publié il y a 10 ans, et qui a servi de base aux livraisons précédentes de la présente publication.

Les systèmes de classification publiés dans les publications *Système d'information financière à l'usage des corporations municipales* diffèrent sensiblement de ceux de l'ancien manuel et l'on conseille au lecteur de consulter les nouvelles publications pour prendre pleinement connaissance de la nature et l'étendue de ces variations puisqu'il serait peu pratique de les décrire ici en détail.

Il est évident que les solutions de continuité mentionnées ci-dessus empêchent l'usage de données dans cette publication, ou dans la publication complémentaire "chiffres réels", en ce qui concerne la construction et l'analyse des séries chronologiques de données sur les administrations locales. La période de changement et de modification rapides semble diminuer et la Division de finances publiques espère obtenir des ressources qui permettraient la révision et la mise à date de toute la statistique financière pour tous les échelons de l'administration publique depuis 10 ans. Ces ressources ne sont toutefois par encore disponibles et, de plus, le processus de révision lui-même sera probablement très long; par conséquent, plusieurs années peuvent s'écouler avant que les données ne soient accessibles.

Statistique Canada classe les administrations locales en 3 grandes catégories: les municipalités, les commissions spécialisées et les conseils scolaires. Les municipalités, qu'il s'agisse de communautés urbaines ou de municipalités proprement dites, peuvent déléguer leurs pouvoirs pour fournir certains services, à des commissions ou des conseils semi-autonomes que Statistique Canada considère comme entreprises de divers ordres. Souvent ces conseils sont des créations mixtes d'un groupe de municipalités. Les quasi-municipalités administrées par des conseils ou des commissions nommées par la province sont considérées comme municipalités parce qu'elles assument des fonctions de compétence municipale dans les régions qui autrement seraient considérées comme territoires non municipalisés. Les administrations provinciales mettent aussi sur pied des commissions spécialisées dans le but d'assurer un service

regional library boards, conservation authorities, etc. School boards are closely allied to municipalities in that, in many instances, a large part of the financing is provided through the municipality and, in some cases, the school board is formed from a committee of council. Although the quality and quantity of service provided by school boards is controlled by the provincial government, there is a strong local element of administration; Statistics Canada therefore considers school boards as a major component of local government.

The financial statistics presented herein are for municipalities (including waterworks), school boards and joint boards in their entirety; the remaining municipal boards, and special purpose boards are included to the extent to which they are financed by municipalities. Also to maintain uniformity, as near as possible, between provinces and to adhere to the concept of "gross revenue" and "gross expenditure (cost of services provided)", capital expenditures and relative provincial grants are included for municipalities, school boards and for special purpose boards that could be identified and for all conservation authorities in Ontario.

In the main the data in this report refers to the calendar year, but in a few cases it has been necessary to use the financial period nearest to December 31.

### Estimating Procedures

The estimates presented as "Preliminary" for 1971 and "Estimated" for 1972 in this publication were obtained by projection of 1969 information as published in *Local Government Finance - Actual*, Catalogue 68-204 on the trends established by survey. The data was collected and assembled, however, within the framework of the new manual (as described above).

Municipalities included in the survey were selected on the basis of 2 criteria.

- (1) Municipalities considered unique and therefore not representative were selected to be surveyed on a full coverage basis. This group included all municipalities in metropolitan and major urban areas, most remaining cities, and other municipalities which constituted extremes during the process of forming homogeneous groups prior to sample selection.
- (2) The remaining municipalities were grouped essentially by type of corporation (cities, towns, villages, etc.) within each province with some groups sub-

particulier dans une région qui englobe plus d'une municipalité (commissions régionales de bibliothèques, organismes de conservation etc.). La relation entre les conseils scolaires et les municipalités est très étroite du fait que dans nombre de cas, le financement des premiers est largement assuré par les seconds, et que dans certains cas, le conseil scolaire procède d'un comité du conseil municipal. Bien que la province ait un droit de regard sur la qualité et la quantité des services assurés par un conseil scolaire, la part d'administration locale est considérable. Par conséquent, Statistique Canada considère les conseils scolaires comme un élément important de l'administration locale.

La statistique financière présentée ici est donc celle des municipalités (y compris les services des eaux), des conseils scolaires et des comités mixtes dans leur totalité; les autres commissions municipales et commissions spécialisées ne sont comprises que dans la mesure où elles sont financées par une municipalité. Afin de respecter, autant que possible, l'uniformité d'une province à l'autre et d'adhérer à la notion de "recettes brutes" et de "dépenses brutes (coût des services fournis)", les dépenses d'investissement et les subventions provinciales correspondantes ont été prises en compte pour toutes les municipalités, tous les conseils scolaires et toutes les commissions spécialisées qu'il a été possible d'identifier, ainsi que pour toutes les autorités dirigées de conservation en Ontario.

En général, les données présentées dans ce bulletin se rapportent à l'année civile, mais dans quelques cas, il a été nécessaire d'utiliser la période financière qui se terminait le plus près du 31 décembre.

### Méthodes d'estimation

Les estimations présentées ici comme "chiffres préliminaires" pour 1971 et "estimations" pour 1972 sont tirées de la projection des chiffres de 1969 qui figurent dans *Finances des administrations publiques locales - Chiffres réels*, catalogue 68-204F conformément aux tendances observées à l'enquête que Statistique Canada a menée. Toutefois les données ont été recueillies et assemblées dans le cadre du manuel, comme il a été dit ci-dessus.

Deux critères ont présidé au choix des municipalités qui ont participé à l'enquête.

- (1) Dans le cas des municipalités considérées comme uniques, donc ne constituant pas des exemples typiques, on a procédé à une enquête exhaustive, faisant partie de cette catégorie: toutes les municipalités dans des régions métropolitaines et des grandes agglomérations urbaines, la plupart des villes restantes, et les autres municipalités constituant des cas extrêmes au moment de la formation de groupes homogènes qui a précédé le tirage de l'échantillon.
- (2) Les autres municipalités ont été groupées essentiellement par type (villes, villages, etc.) dans chaque province et, au besoin, certains groupes ont été

divided into size strata where required. From these homogeneous groups sample municipalities were selected on a random basis with representation weighted by the proportion of the group to the respective provincial aggregate of total expenditures.

Basically, the method of projection was to apply the percentage change in sample data to current year, to the total data for the base year. This link or index of change was computed and applied for each item of revenue, expenditure, etc., within each sample group.

The estimates derived from data provided by those selected as sample municipalities were added to the estimates provided by the self-representing municipalities to arrive at projected revenue and expenditure comparable in scope to the Department of Municipal Affairs base data. These estimates on a provincial aggregate basis were then adjusted to compensate for portions of local government not represented by the survey and also to make the estimates comparable in scope with the "actual" series as published for 1969.

Capital expenditures were derived from the same survey, but a different estimating technique was employed. Although the same sample composition was observed, the estimates derived from sample municipalities were tempered by supporting information respecting capital expenditure programmes and works contract data. With the introduction of the new survey form based on *A Financial Information System for Municipalities*, the functional presentation of capital expenditures was presented more accurately than in previous years.

### Limitations

Although the specific items of revenue and expenditure are common to nearly all municipalities, their relative significance within the financial structure of each municipality differs to varying degrees. As an example, towns of a comparable size in a given area might all have "real property tax" and "licences and permits" revenue. The proportion of these items of revenue to their respective total revenue could vary from one town to another within the group — indeed, it might be expected that the proportion of "licences and permits" would vary significantly. Therefore, the sample representation varies between items of revenue and expenditure and the quality of the estimates varies accordingly. Items which form a stable proportion of revenue or expenditure for a sample group of municipalities have a higher degree of accuracy or reliability than others. This inadequacy of the sample to be totally representative was recognized and special attention was given during the compilation to minimize errors resulting from under-representation of this

subdivisés en strates (selon la taille). De ces groupes homogènes, on a tiré au hasard des municipalités-échantillons qui ont elles-mêmes pondérées en fonction de la part du groupe dans l'agrégat provincial des dépenses totales.

La méthode fondamentale de projection consistait à appliquer aux données totales de l'année de base, le taux de variation calculé pour l'échantillon entre l'année de base et l'année observée. Ce rapport, ou indice de variation, a été calculé et appliqué à chaque poste des recettes, des dépenses, etc., pour chaque groupe de l'échantillon.

Les estimations établies à partir des données fournies par les municipalités échantillonnées ont été ajoutées à celles des municipalités autoreprésentatives afin d'en arriver à des projections des recettes et des dépenses qui aient une portée comparable à celle des données de base du ministère des Affaires municipales. Ces estimations fondées sur les agrégats provinciaux ont alors été ajustées de manière à tenir compte des éléments de l'administration locale exclus de l'enquête et de façon à aligner ces estimations dans les limites utilisées dans la série des "chiffres réels" publiée pour 1969.

Les dépenses d'investissement ont été tirées de la même enquête, mais grâce à une méthode d'estimation différente. Bien que la composition de l'échantillon ait été la même, on a pondéré les estimations établies pour les municipalités échantillonnées en s'appuyant sur des chiffres tirés des programmes d'investissement et des marchés de travaux. Avec l'introduction de la nouvelle formule d'enquête sur le *Système d'information financière à l'usage des corporations municipales* la présentation fonctionnelle des dépenses d'investissement a été faite avec plus de précision que les années précédentes.

### Limites

Bien que, dans la très grande majorité des municipalités, les postes de recettes et de dépenses soient identiques, leur importance relative au sein de la structure financière de chaque municipalité varie largement. Ainsi, dans une région donnée, les villes de taille comparable pourront avoir des recettes provenant des "impôts fonciers" et des "licences et permis", mais la proportion de ces postes par rapport à l'ensemble des recettes peut très bien varier d'une ville à l'autre; de fait, il est vraisemblable que la proportion respective des "licences et permis" varie considérablement. La représentativité des postes de recettes et de dépenses de l'échantillon est donc sujette à varier et la qualité des estimations s'en trouve touchée d'autant. Les postes qui constituent une part constante des recettes ou des dépenses pour un certain échantillon de municipalités comportent un degré plus élevé d'exactitude ou de fiabilité que les autres. Comme on savait que l'échantillon ne pouvait être totalement représentatif, on s'est efforcé, au moment d'exploiter les données, de réduire le plus possible l'effet des erreurs dues à ce

nature. Such errors of sampling vary from item to item; however, the sample element forms only a part of the provincial total and hence the error in the provincial total of a particular item is relatively insignificant.

### Gross Revenue and Expenditure

The "Gross" concept is employed in the presentation of statistics in this publication to conform with the publications for the other levels of government and the *Local Government Finance - Actual*, Catalogue 68-204. Gross revenue includes all revenue regardless of source; gross expenditure (or cost of services provided) includes all current and capital expenditures without duplication. To avoid duplication in the calculation of gross expenditure, outlays for the acquisition of fixed assets are reflected at the point in time at which the fixed asset is acquired rather than when any loan in this respect is repaid (municipal accounting conventions treat the repayment of long-term loans as an expenditure in the year in which revenue is provided for this purpose). Also, as the "gross" presentation constitutes a consolidation of the "current" and "capital" funds, the current expenditure item "contributions to the capital and loan fund" is eliminated as an inter-fund transfer.

Gross revenue in this publication includes all current revenue of all municipalities (including waterworks) school boards and the net contributions from municipal boards, together with capital grants from other levels of government respecting all capital expenditures of municipalities and their boards (except enterprises), special purpose boards and school boards. Gross expenditure was compiled to include current and capital expenditures without duplication including the same coverage of the local government universe as the revenue. Because municipal boards are included only to the extent of their financing by municipalities, the revenues are understated by the amount of relevant transfers to these entities from other levels of government and to a lesser extent by other incidental forms of revenue.

Most provinces provide some form of tax relief to the homeowner and in Ontario to the tenant. In 1971 in this statistical presentation such payments are considered as payments to the homeowner or tenant by the provincial government and administered through the municipal offices, and therefore not a reduction of municipal tax revenue nor a municipal revenue grant from the province. In 1972 in Ontario, such tax relief is claimed by the individual tax payer at the time of filing his personal income tax return, and again is not reflected in this publication.

manque de représentativité. Les erreurs d'échantillonnage de ce genre varient d'un poste à l'autre; toutefois, comme les données provenant de l'échantillon ne constituent qu'une partie du total provincial, l'erreur pour un poste donné est donc relativement négligeable au niveau de l'ensemble de la province.

### Recettes et dépenses brutes

Nous avons utilisé le concept de recettes et de dépenses "brutes" de manière à aligner les chiffres présentés ici avec les données publiées dans les bulletins consacrés aux autres échelons de l'administration publique et dans le bulletin intitulé *Finances des administrations publiques locales - Chiffres réels*, catalogue 68-204F. Les recettes brutes comprennent toutes les dépenses courantes et toutes les dépenses d'investissements, chaque dépense n'étant prise en compte qu'une seule fois. Pour éviter qu'une même somme soit comprise deux fois dans le calcul des dépenses brutes, le coût d'acquisition des immobilisations est pris en compte au moment de l'acquisition et non pas lors du remboursement d'un emprunt contracté à cet égard. (Par convention, la comptabilité municipale impute le remboursement d'une dette à long terme aux dépenses de l'année même où les recettes correspondantes lui sont attribuées). De même, comme les dépenses "brutes" représentent la consolidation des dépenses "courantes" et des dépenses "d'investissement", le poste des "contributions au fonds de capital et d'emprunt" (reports d'un fonds à l'autre) se trouve éliminé.

Les recettes brutes comprennent les recettes courantes de toutes les municipalités (y compris le service des eaux) et des conseils scolaires, la contribution nette des comités municipaux et les subventions en capital des autres échelons de l'administration publique relativement aux dépenses d'investissement des municipalités et de leurs commissions (entreprises exceptées), les commissions spécialisées et des conseils scolaires. Les dépenses brutes sont calculées de manière à prendre en compte une seule fois les dépenses courantes et les dépenses d'investissement en prenant pour base le même univers que pour les recettes. Du fait que les comités municipaux sont uniquement pris en compte dans la mesure où ils sont financés par les municipalités, les sommes transférées à ces organes par d'autres échelons de l'administration publique, et, à un degré moindre, d'autres formes de recettes accessoires, ont amené une minoration des recettes.

La plupart des provinces accordent un certain dégrèvement d'impôt aux propriétaires et, en Ontario par exemple, aux locataires. En 1971, ces paiements sont considérés ici comme étant versés par la province aux propriétaires ou aux locataires par l'entremise de la municipalité et ne constituent donc ni une réduction des recettes produites par les taxes municipales ni une recette municipale provenant d'une subvention accordée par la province. En 1972, ce dégrèvement d'impôt est demandé en Ontario par le contribuable lorsqu'il remplit sa formule de déclaration d'impôt sur le revenu, et il n'est pas présenté ici.

Although the detail of revenue and expenditure was extended in the source documents, continuity with the actual series was maintained wherever possible, within the context of conceptual and classification changes, to reflect the true trend in the preliminary figures for 1971 and the estimates. Due to improved reporting especially as to detail of expenditure, conservation authorities in Ontario, which were classified "Protection to persons and property", in 1970 and 1971, are classified to "Environmental development services" and "Recreation and cultural services" in this publication.

### Debenture Debt Charges

The analysis of debenture debt charges shown in Table 4 is a presentation of the charges relative to the gross debenture debt of local government. Due to the fact that the responsibility for education rests with the provincial government in New Brunswick there are no debenture debt charges for schools in this province. Likewise in Newfoundland as the schools are primarily denominational and largely financed by the province, no debenture debt charges are recorded at the local level.

### Conditional Transfers from Federal and Provincial Governments

Conditional transfers from other levels of government, comprising grants-in-aid and shared-cost contributions of both a current and capital nature, are presented in provincial aggregate form by function. The presentation conforms both in scope and detail with that shown for prior years in the publication *Local Government Finance - Actual*, Catalogue 68-204. In a few cases grants are identifiable by programme rather than by function. Grants under the Local Initiatives Programme were apportioned between recreational and cultural services, and environmental health services.

### Selected Metropolitan and Major Urban Areas

In presenting the information on selected metropolitan and major urban areas, the entire municipality was included in this presentation. This is especially meaningful in the case of Regional municipalities where all local entities within the regional boundaries are included.

The decision respecting the inclusion of school boards in the selected metropolitan and major urban area compilations, where boundaries were not coterminous with the areas, was based on those boards, the areas of which most closely conformed to the selected metropolitan and major urban areas. Provincial grants

Bien que la description des recettes et des dépenses soit plus détaillée dans les documents de source, on a respecté aussi souvent que possible, la continuité dans cette série, dans le contexte des variations conceptuelles et de classification, afin de rendre compte de la tendance véritable des chiffres préliminaires de 1971 et des estimations pour 1972. Grâce à l'amélioration des méthodes de déclaration, spécialement en ce qui a trait au détail des dépenses, les autorités chargées de conservation en Ontario, qui étaient classés sous "Protection de la personne et de la propriété", en 1970 et 1971, sont désormais classés sous "Services du développement de l'environnement" et sous "Loisirs et services culturels".

### Frais du service de la dette obligataire non garantie

L'analyse du service de la dette obligataire non garantie, au tableau 4, présente les frais ayant trait à la dette obligataire non garantie des administrations locales. Parce que l'éducation au Nouveau-Brunswick relève du gouvernement provincial, il n'y a pas de frais du service de la dette obligataire non garantie pour les écoles de cette province. De même à Terre-Neuve, parce que les écoles sont d'abord confessionnelles et largement financées par la province, on n'enregistre aucun frais du service de dette obligataire non garantie au niveau local.

### Transferts conditionnels provenant des administrations fédérale et provinciales

Les transferts conditionnels versés par les autres échelons de l'administration publique au titre des dépenses courantes et d'investissement (y compris les subventions et les contributions aux programmes conjoints) sont présentés par fonction au niveau des agrégats provinciaux. La présentation est conforme en étendue et en détail à celle des années antérieures qui figure dans *Finances des administrations publiques locales - Chiffres réels*, catalogue 68-204F. Quelques subventions relèvent d'un programme et non pas d'une fonction. Les subventions au titre des "Programmes d'initiatives locales" sont réparties entre les services culturels et des loisirs et les services de santé.

### Certaines régions métropolitaines et grandes agglomérations urbaines

En présentant les renseignements sur certaines régions métropolitaines et grandes agglomérations urbaines, la municipalité au complet a été prise en compte dans cette publication. Ce fait est particulièrement significatif dans le cas des municipalités régionales où toutes les agglomérations comprises dans les limites régionales sont prises en compte.

On a décidé d'inclure les conseils scolaires dans les calculs de certaines régions métropolitaines et grandes agglomérations urbaines, dont les limites n'étaient pas communes à celles des régions, parce que les régions de ces conseils, se rapprochaient de très près de ces régions métropolitaines et grandes agglomérations urbaines. Les

to these school boards and their current expenditure were allocated provincially on a per capita basis. Similar treatment was accorded the estimated capital expenditures in Quebec, Ontario and British Columbia.

So far as possible gross revenue and expenditure of selected metropolitan and major urban areas is presented on a basis consistent with the provincial aggregates. Exceptions to this consistency occur where inter-municipal transfers can be almost entirely eliminated on consolidation for the provincial aggregate, but only partially eliminated in the aggregate for the selected metropolitan and major urban areas — e.g., county rates in Ontario.

Where adjustments were required to provincial aggregate data, to offset known bias in the estimates, a comparable adjustment was made to the selected metropolitan and major urban area data on a judgment basis.

In some instances conditional grants were available only in provincial aggregate form and are therefore omitted from compilations of selected metropolitan and major urban areas, resulting in an understatement of the ratio to provincial aggregate. This situation is accentuated in Ontario where provincial grants to conservation authorities are shown in the provincial aggregate only. Also, in Tables 13 and 16, the detail respecting the federal conditional transfers was insufficient to enable presentation of meaningful ratios except in total.

Provincial conditional transfers shown in the selected metropolitan and major urban area columns is partially lacking in detail in some instances. Where this occurs the ratio in the item "Other", may approach or exceed 100 in which case the ratio for one or more of the specified items is understated.

subventions provinciales accordées à ces conseils scolaires et leurs dépenses courantes ont été ventilées par province proportionnellement à la population. Un traitement semblable a été accordé aux estimations des dépenses d'investissement au Québec, Ontario et Colombie-Britannique.

Autant que possible les recettes et les dépenses brutes de certaines régions métropolitaines et des agglomérations urbaines sont présentées sur une base conforme aux agrégats provinciaux. Il y a des exceptions lorsque les transferts inter-municipaux peuvent être presque entièrement éliminés seulement en partie dans l'agrégat pour certaines régions métropolitaines et agglomérations urbaines (exemple: taux de comté en Ontario).

Lorsqu'il devenait nécessaire de rajuster les données de l'agrégat provincial, pour contrebalancer une inexactitude connue dans les estimations, on a procédé à un rajustement comparable de certaines régions métropolitaines et agglomérations urbaines à partir d'une estimation.

Dans certains cas on ne pouvait obtenir les subventions conditionnelles que sous forme d'agrégat provincial; on les a donc omises des calculs de certaines régions métropolitaines et grandes agglomérations urbaines, ce qui a pour résultat une sous-évaluation du ratio par rapport à l'agrégat provincial. Cette situation est accentuée en Ontario où les subventions provinciales aux autorités de conservation sont uniquement prises en compte dans l'agrégat provincial. En outre, au tableaux 13 et 16, le détail des transferts conditionnels fédéraux était insuffisant pour permettre la présentation de rapports significatifs sauf au total.

Les transferts conditionnels provinciaux qui paraissent dans les colonnes de certaines régions métropolitaines et grandes agglomérations urbaines manquent partiellement de détails dans certains cas. Quand cela se produit, le ratio de la rubrique "Autres" peut se rapprocher de 100 ou le dépasser et dans ce cas le rapport d'une ou de plusieurs rubriques est sous-évalué.

# Comparison of Preliminary and Estimates to Actual Current Revenue and Expenditure, 1959 to 1972

Comparaison entre les résultats préliminaires et les résultats estimatifs, et les recettes et les dépenses courantes réelles, 1959 à 1972

TABLEAU 1. Recettes générales par province et par territoire, 1971 et 1972

## INTRODUCTION

This report is the seventeenth in an annual series presenting estimated revenue and expenditure of local governments. For a variety of reasons actual data on local government financial transactions cannot be produced until some considerable time after the year to which they apply. This interim report, therefore, presents more up to date information than is available in the companion publication Local Government Finance, Actual, Catalogue 68-204.

The 17 years during which these reports have been issued have witnessed a multitude of changes in the roles assigned to local governments, in their structures and methods of operation, in the concepts and classifications governing their financial reporting and in their ability to report on their financial transactions. These developments have been reflected in this series of publications generally as they occurred since there was no point in time when all these major factors seemed likely to stabilize. The result is that there are many discontinuities within the series; some of the more important in recent years have been:

1966 and 1967. — Revenue and expenditure data for municipalities within the Yukon and Northwest Territories and for municipalities within selected Census Metropolitan Areas were included for the first time.

1967 and 1968. — Rearrangement of items to show revenue from own sources and cost of services provided was introduced. Estimated revenue and expenditure formerly presented on a "current" basis were now shown on a "gross" basis. The functional classification of conditional grants was introduced. The Census Metropolitan Area presentation was extended to 17 CMA's and data on Census Major Urban Areas introduced representing all regions except those in the Province of Quebec.

1968 and 1969. — Financial statistics on school boards were included in their entirety, whereas in prior years they were included only to the extent of their financing by municipalities. Waterworks were included for the first time as an integral part of the general services provided by local government. Census Metropolitan Area and Major Urban Area statistics for those areas within the Province of Quebec were also included to complete this form of presentation. The substantial values previously shown as "other revenue", were presented in detail.

1969 and 1970. — Capital expenditure of municipally owned hospitals were added as a preliminary first stage in the measurement of this activity.

1970 and 1971. — Tables of gross debenture debt outstanding were dropped from the presentation due to difficulties encountered in estimating. Data on this subject is, however, available in the companion publication Local Government Finance — Actual, Statistics Canada, Catalogue 68-204.

1971 and 1972. — This edition incorporated the concepts and classifications of local governments and local government financial reporting described in A Financial Information System for Municipalities, Catalogue 12-532, 12-533 and 12-534. These volumes, which resulted from the work of the Eighth Federal-Provincial Conference on Municipal Financial Statistics, were issued by Statistics Canada late in 1970 and replaced the Municipal Finance Reporting Manual published a decade earlier, which formed the basis for previous editions of this publication.

Cette publication est la dix-septième d'une série annuelle sur les recettes et les dépenses estimatives des administrations locales. Pour diverses raisons, les données actuelles sur les transactions financières des administrations locales ne peuvent être présentées que longtemps après l'année qu'elles visent. Par conséquent, cette publication provisoire présente davantage de renseignements à jour que ne le fait la publication complémentaire catalogue 68-204 Finances des administrations publiques locales. Chiffres réels.

Au cours des 17 années de parution de ces publications, on a constaté de nombreux changements du rôle attribué aux administrations locales, de leurs méthodes d'administration, des concepts et des classifications applicables à leurs rapports financiers, en même temps qu'évoluait leur capacité à présenter leurs opérations financières. En général, ces changements ont été pris en compte dans la présente série à mesure qu'ils se produisaient puisqu'il semblait peu probable que ces facteurs importants se stabilisent à un moment donné. Il y a donc de nombreuses solutions de continuité dans la série; en voici quelques-unes parmi les plus importantes:

1966 et 1967. — Les données sur les recettes et les dépenses pour les municipalités du Yukon et des Territoires du Nord-Ouest et pour certaines municipalités des régions métropolitaines de recensement ont été prises en compte pour la première fois.

1967 et 1968. — On a redispisé les rubriques de manière à indiquer les recettes de sources propres et le coût des services fournis. La présentation des recettes et des dépenses estimatives autrefois sur une base courante se fait désormais sur une base brute. On a introduit la classification fonctionnelle des subventions conditionnelles. La présentation par région métropolitaine de recensement est passée à 17 R.M.R. et les données sur des grandes agglomérations urbaines de recensement sont apparues, représentant toutes les régions à l'exception de celles de la province de Québec.

1968 et 1969. — La statistique financière des conseils scolaires a été prise en compte intégralement alors que les années précédentes, les données figuraient uniquement dans la mesure où ces conseils étaient financés par les municipalités. Les services des eaux y sont apparus pour la première fois comme partie intégrante des services généraux fournis par les administrations locales. En outre, la statistique relative aux régions métropolitaines de recensement et aux grandes agglomérations urbaines de recensement a été complétée grâce à l'introduction de toutes les R.M.R. et des G.A.U.R. du Québec. Les montants importants présentés auparavant comme "autres recettes" sont désormais détaillés.

1969 et 1970. — On a, comme première tentative de mesure de cette activité, ajouté les dépenses d'investissement des hôpitaux appartenant aux municipalités.

1970 et 1971. — On ne présente plus les tableaux de frais du service de la dette obligataire non garantie en cours en raison des difficultés d'estimation. On peut toutefois se procurer des données sur ce sujet dans la publication complémentaire catalogue 68-204 Finances des administrations publiques locales. Chiffres réels.

1971 et 1972. — La présente édition regroupe les concepts et les classifications des administrations locales et les rapports financiers des administrations locales décrits dans les publications de la série Système d'information financière à l'usage des corporations municipales, (numéros 12-532F, 12-533F et 12-534F au catalogue). Ces ouvrages de Statistique Canada, fruit de la huitième Conférence fédérale-provinciale sur les statistiques financières des municipalités, sont sortis à la fin de 1970 et remplacent le Municipal Finance Reporting Manual, publié il y a dix ans, et qui a servi de base aux éditions précédentes de la présente publication.

1972 and 1973. — A number of changes have been introduced with this issue of the publication. Current revenue and expenditure of local government hospitals are introduced for the first time. "Sales of service — other" includes direct income from patients, other than that paid by the provincial insurance plan. The latter is treated as a provincial conditional transfer and expenditure of these hospitals is recorded under hospital care. Due to improved analysis, revenue received by recreation commissions for services provided is also recorded under "sales and services — other".

In Quebec, sales and services for water, formerly included in special assessments are now included in sales and services "water", again as a result of improved information. A break in the series occurs in 1972 and 1973 based on a tentative decision that social welfare services in Montreal were administered by the city of Montreal and assisted by a 100 per cent grant from the province. This does not constitute a change in policy but a change in statistical presentation.

Prince Edward Island, Nova Scotia, Quebec, Manitoba and British Columbia provide conditional transfers to local school boards to assist local governments to make payments of principal and interest on debt-incurred for school purposes. Previously these transfers were classified as "provincial conditional transfers for education". Improvements in the availability of data have made it possible to segregate the portion of such a transfer relative to principal repayment from the portion relative to interest payments. The portion relative to principal repayment has been classified "provincial conditional transfer for education", and the portion in relation to interest payments has been classified "provincial conditional transfer for fiscal services".

The classification systems incorporated in A Financial Information System for Municipalities show many differences from those in the earlier manual and the reader is advised to consult the new publication to become fully aware of the nature and extent of these changes since it is impractical to describe them in detail here.

It is recognized that the discontinuities mentioned above preclude the use of data in this publication or its "Actual" companion, for the construction and analysis of time series of local government data. There are indications that the period of rapid change and development is passing and the Public Finance Division is planning to revise financial statistics for all levels of government for the past decade to conform with current concepts, classifications and coverage. However, the revision process itself is likely to be a lengthy exercise; several years are likely to pass, therefore, before revised data can be made available.

Statistics Canada assigns local government entities to 3 principal categories — municipalities, special purpose boards and local school boards. Municipalities, whether regional or unitary may delegate authority to provide certain services to semi-autonomous boards or commissions which Statistics Canada classifies as enterprise, institutional or other. Frequently such boards will be the joint creations of a number of municipalities. Quasi-municipalities, administered by provincially-appointed boards or commissions, are regarded as municipalities because they provide limited municipal services to areas that would otherwise be considered unorganized territory. Special purpose boards are also created by provincial governments to provide services of a local nature to areas which usually embrace more than one municipality; examples are regional library boards, conservation authorities, etc. School boards are closely allied to municipalities in that, in many instances, a large part of the financing is provided through the municipality and in some cases, the school board is formed from a committee of council. Although the quality and quan-

1972 et 1973. — Un certain nombre de modifications ont été apportées à la présente édition. Les recettes et les dépenses courantes des hôpitaux municipaux sont présentées pour la première fois. Les "ventes de services — autres" prennent en compte le revenu direct des malades, autre que celui versé par les régimes d'assurance provinciaux. Ces derniers sont traités comme des transferts conditionnels provinciaux et les dépenses de ces hôpitaux sont enregistrées sous la rubrique consacrée aux soins médicaux. Grâce à une analyse plus poussée, les recettes des commissions récréatives au titre des services fournis sont aussi regroupées sous la rubrique "ventes de services — autres".

Au Québec, les ventes des services d'approvisionnement d'eau, qui figuraient auparavant sous une rubrique spéciale, sont maintenant pris en compte dans les ventes des services "Approvisionnement d'eau", grâce également à des renseignements de meilleure qualité. Il y a solution de continuité dans les séries en 1972 et en 1973 par suite d'une décision de caractère provisoire intéressant les services de bien-être social de la ville de Montréal que l'on juge administrés par la ville et subventionnés à 100 pour cent par la province. Il ne s'agit pas là d'un changement de politique, mais d'une simple modification de la présentation statistique.

L'Île-du-Prince-Édouard, la Nouvelle-Écosse, le Québec, le Manitoba et la Colombie-Britannique assurent des transferts conditionnels aux conseils scolaires pour aider les administrations publiques locales à payer le principal et l'intérêt sur la dette contractée au titre de l'éducation. Ces transferts étaient classés auparavant comme "transferts conditionnels provinciaux pour l'éducation". L'amélioration de la qualité des données a permis d'isoler la partie du transfert relative au remboursement du principal de celle relative aux paiements sous forme d'intérêts. La partie se rapportant au remboursement du principal a été reclassée dans les transferts conditionnels provinciaux pour l'éducation, et la partie relative aux paiements sous forme d'intérêts a été reclassée dans les transferts conditionnels provinciaux au titre des services financiers.

Les systèmes de classification publiés dans la série de publications intitulée Système d'information financière à l'usage des corporations municipales diffèrent sensiblement de ceux de l'ancien manuel, et l'on conseille au lecteur de consulter les nouvelles publications pour prendre pleinement connaissance de la nature et de l'étendu de ces variations puisqu'il serait peu pratique de les décrire ici en détail.

Il est évident que les solutions de continuité mentionnées ci-dessus empêchent l'usage de données dans cette publication, ou dans la publication complémentaire "chiffres réels" en ce qui concerne la construction et l'analyse des séries chronologiques de données sur les administrations locales. La période de changement et de modification rapides semble diminuer et la Division des finances publiques envisage la révision de toute la statistique financière pour tous les échelons de l'administration publique depuis dix ans conformément à la base, aux concepts et aux classifications courants. Toutefois le processus de révision lui-même sera probablement très long; par conséquent, plusieurs années peuvent s'écouler avant que les données ne soient accessibles.

Statistique Canada classe les administrations locales en 3 grandes catégories: les municipalités, les commissions spécialisées et les conseils scolaires. Les municipalités, qu'il s'agisse de communautés urbaines ou de municipalités proprement dites, peuvent déléguer leurs pouvoirs pour fournir certains services, à des commissions ou des conseils semi-autonomes que Statistique Canada considère comme entreprises de divers ordres. Souvent ces conseils sont des créations mixtes d'un groupe de municipalités. Les quasi-municipalités administrées par des conseils ou des commissions nommées par la province sont considérées comme municipalités parce qu'elles assument des fonctions de compétence municipale dans les régions qui autrement seraient considérées comme territoires non municipalisés. Les administrations provinciales mettent aussi sur pied des commissions spécialisées dans le but d'assurer un service particulier dans une région qui englobe plus d'une municipalité (commission régionales de bibliothèques, organismes de conservation, etc.). La relation entre les conseils scolaires et les municipalités est très étroite du fait que dans nombre de cas, le financement des premiers est largement assuré par les seconds, et que dans certains cas, le conseil scolaire procède d'un comité du conseil municipal. Bien que la province

ity of service provided by school boards is controlled by the provincial government, there is a strong local element of administration; Statistics Canada therefore considers school boards as a major component of local government.

The financial statistics presented herein are for municipalities (including waterworks), school boards and joint boards in their entirety; the remaining municipal boards, and special purpose boards are included to the extent to which they are financed by municipalities. Also to maintain uniformity, as near as possible, between provinces and to adhere to the concept of "gross revenue" and "gross expenditure (cost of services provided)", capital expenditures and relative provincial grants are included for municipalities, school boards and for special purpose boards that could be identified and for all conservation authorities in Ontario.

In the main the data in this report refers to a calendar year, but in a few cases it has been necessary to use the financial period nearest to December.

#### Estimating Procedures:

The estimates presented as "Preliminary" for 1972 and "Estimated" for 1973 in this publication were obtained by projection of 1970 information as published in Local Government Finance - Actual, Catalogue 68-204 the trends established by survey. The data was collected and assembled, however, within the framework of the new manual (as described above).

Municipalities included in the survey were selected on the basis of 2 criteria.

1) Municipalities considered unique and therefore not representative were selected to be surveyed on a full coverage basis. This group included all municipalities in metropolitan and major urban areas, most remaining cities, and other municipalities which constituted extremes during the process of forming homogeneous groups prior to sample selection.

The remaining municipalities were grouped essentially by type of corporation (cities, towns, villages, etc.) within each province with some groups subdivided into size strata where required. From these homogeneous groups sample municipalities were selected on a random basis with representation weighted by the proportion of the group to the respective provincial aggregate of total expenditures.

Basically, the method of projection was to apply percentage change in sample data to current year, the total data for the base year. This link or index of change was computed and applied for each item revenue, expenditure, etc., within each sample group.

The estimates derived from data provided by those selected as sample municipalities were added to estimates provided by the self-representing municipalities to arrive at projected revenue and expenditure comparable in scope to the Department of Municipal Affairs base data. These estimates on a provincial aggregate basis were then adjusted to compensate portions of local government not represented by survey and also to make the estimates comparable in scope with the "actual" series as published for 1970.

Capital expenditures were derived from the same survey, but a different estimating technique was employed. Although the same sample composition was observed, the estimates derived from sample municipalities were tempered by supporting information respecting capital expenditure programmes and works contract

ait un droit de regard sur la qualité et la quantité des services assurés par un conseil scolaire, la part d'administration locale est considérable. Par conséquent, Statistique Canada considère les conseils scolaires comme un élément important de l'administration locale.

La statistique financière présentée ici est donc celle des municipalités (y compris les services des eaux), des conseils scolaires et des comités mixtes dans leur totalité; les autres commissions municipales et commissions spécialisées ne sont comprises que dans la mesure où elles sont financées par une municipalité. Afin de respecter, autant que possible, l'uniformité d'une province à l'autre et d'adhérer à la notion de "recettes brutes" et de "dépenses brutes (coût des services fournis)", les dépenses d'investissement et les subventions provinciales correspondantes ont été prises en compte pour toutes les municipalités, tous les conseils scolaires et toutes les commissions spécialisées qu'il a été possible d'identifier, ainsi que pour toutes les autorités dirigées de conservation en Ontario.

En général, les données présentées ici se rapportent à l'année civile, mais dans quelques cas, il a été nécessaire d'utiliser la période financière qui se terminait le plus près du 31 décembre.

#### Méthodes d'estimation:

Les estimations présentées ici comme "chiffres préliminaires" pour 1972 et "estimations" pour 1973 sont tirées de la projection des chiffres de 1970 qui figurent dans Finances des administrations publiques locales - Chiffres réels, catalogue 68-204 conformément aux tendances observées à l'enquête que Statistique Canada a menée. Toutefois les données ont été recueillies et assemblées dans le cadre du manuel, comme il a été dit ci-dessus.

Lors du choix des municipalités on s'est servi de deux critères.

(1) Dans le cas des municipalités considérées comme uniques, donc en constituant pas des exemples typiques, on a procédé à une enquête exhaustive, faisant partie de cette catégorie: toutes les municipalités dans des régions métropolitaines et des grandes agglomérations urbaines, la plupart des villes restantes, et les autres municipalités constituant des cas extrêmes au moment de la formation de groupes homogènes qui a précédé le tirage de l'échantillon.

(2) Les autres municipalités ont été groupées essentiellement par type (villes, villages, etc.) dans chaque province et, au besoin, certains groupes ont été subdivisés en strates (selon la taille). De ces groupes homogènes, on a tiré au hasard des municipalités-échantillons qui sont elles-mêmes pondérées en fonction de la part du groupe dans l'agrégat provincial des dépenses totales.

La méthode fondamentale de projection consistait à appliquer aux données totales de l'année de base le taux de variation calculé pour l'échantillon entre l'année de base et l'année observée. Ce rapport, ou indice de variation, a été calculé et appliqué à chaque poste des recettes, des dépenses, etc., pour chaque groupe de l'échantillon.

Les estimations établies à partir des données fournies par les municipalités échantillonnées ont été ajoutées à celles des municipalités autoreprésentatives afin d'en arriver à des projections des recettes et des dépenses qui aient une portée comparable à celle des données de base du ministère des Affaires municipales. Ces estimations fondées sur les agrégats provinciaux ont alors été ajustées de manière à tenir compte des éléments de l'administration locale exclus de l'enquête et de façon à aligner ces estimations dans les limites utilisées dans la série des "chiffres réels" publié pour 1970.

Les dépenses d'investissement ont été tirées de la même enquête, mais par une méthode d'estimation différente. Bien que la composition de l'échantillon ait été la même, on a pondéré les estimations établies pour les municipalités échantillonnées en s'appuyant sur des chiffres tirés des programmes d'investissement et des marchés de travaux. Avec l'introduc-

data. With the introduction of the new survey form based on A Financial Information System for Municipalities, the functional presentation of capital expenditures was presented more accurately than in previous years.

#### Limitations:

Although the specific items of revenue and expenditure are common to nearly all municipalities, their relative significance within the financial structure of each municipality differs to varying degrees. As an example, towns of a comparable size in a given area might all have "real property tax" and "licences and permits" revenue. The proportion of these items of revenue to their respective total revenue could vary from one town to another within the group - indeed, it might be expected that the proportion of "licences and permits" would vary significantly. Therefore, the sample representation varies between items of revenue and expenditure and the quality of the estimates varies accordingly. Items which form a stable proportion of revenue or expenditure for a sample group of municipalities have a higher degree of accuracy or reliability than others. This inadequacy of the sample to be totally representative was recognized and special attention was given during the compilation to minimize errors resulting from under-representation of this nature. Such errors of sampling vary from item to item; however, the sample element forms only a part of the provincial total and hence the error in the provincial total of a particular item is relatively insignificant.

#### General Revenue and Expenditure:

General revenue and expenditure infers the "gross" concept which is used in this publication to conform with the publications for the other levels of government. General revenue includes all revenue regardless of source; general expenditure includes all current and capital expenditures without duplication. To avoid duplication, outlays for the acquisition of fixed assets are reflected at the point in time at which the fixed asset is acquired rather than when any loan in this respect is repaid (municipal accounting conventions treat the repayment of long-term loans as an expenditure in the year in which the revenue is provided for this purpose). Also as the "general" presentation constitutes a consolidation of the "current" and "capital" funds, the current expenditure item "contributions to the capital and loan fund" is eliminated as an inter-fund transfer.

General revenue in this publication includes all current revenue of all municipalities (including water-works) school boards and the net contributions from municipal boards, together with capital grants from other levels of government respecting all capital expenditures of municipalities and their boards (except enterprises), special purpose boards and school boards. General expenditure comprises current and capital expenditures without duplication including the same coverage of the local government universe as the revenue. Because municipal boards are included only to the extent of their financing by municipalities, the revenues are understated by the amount of direct transfers to these entities from other levels of government and to a lesser extent by other incidental forms of revenue.

#### Debenture Debt Charges:

The analysis of debenture debt charges shown in Table 4 is a presentation of the charges relative to the gross debenture debt of local government. Due to the fact that the responsibility for education rests with the provincial government in New Brunswick there are no debenture debt charges for schools in this province. Likewise in Newfoundland as the schools are primarily denominational and largely financed by the province, no debenture debt charges are recorded at the local level.

tion de la nouvelle formule d'enquête sur le Système d'information financière à l'usage des corporations municipales la présentation fonctionnelle des dépenses d'investissement a été faite avec plus de précision que les années précédentes.

#### Limites:

Bien que pour la très grande majorité des municipalités les postes des recettes et des dépenses soient identiques, leur importance relative au sein de la structure financière de chaque municipalité varie largement. Ainsi, dans une région donnée, les villes de taille comparable pourront avoir des recettes provenant des "impôts fonciers" et des "licences et permis", mais la proportion de ces postes par rapport à l'ensemble des recettes peut très bien varier d'une ville à l'autre; de fait, il est vraisemblable que la proportion respective des "licences et permis" varie considérablement. La représentativité des postes de recettes et de dépenses de l'échantillon est donc sujette à varier et la qualité des estimations s'en trouve touchée d'autant. Les postes qui constituent une part constante des recettes ou des dépenses pour un certain échantillon de municipalités comportent un degré plus élevé d'exactitude ou de fiabilité que les autres. Comme on savait que l'échantillon ne pouvait être totalement représentatif, on s'est efforcé, au moment d'exploiter les données, de réduire le plus possible l'effet des erreurs dues à ce manque de représentativité. Les erreurs d'échantillonnage de ce genre varient d'un poste à l'autre; toutefois, comme les données provenant de l'échantillon ne constituent qu'une partie du total provincial, l'erreur pour un poste donné est donc relativement négligeable au niveau de l'ensemble de la province.

#### Recettes et dépenses générales:

Les recettes et les dépenses générales impliquent le concept de recettes et de dépenses "brutes" utilisé dans cette publication de manière à aligner les chiffres présentés ici sur les données figurant dans les publications consacrées aux autres échelons de l'administration publique. Les recettes générales comprennent toutes les dépenses courantes et toutes les dépenses d'investissement, chaque dépense n'étant prise en compte qu'une seule fois. Pour éviter qu'une même somme soit prise en compte deux fois dans le calcul des dépenses générales, le coût d'acquisition des immobilisations est pris en compte au moment de l'acquisition et non pas lors du remboursement d'un emprunt contracté à cette fin. (Par convention, la comptabilité municipale impute le remboursement d'une dette à long terme aux dépenses de l'année même pour laquelle les recettes correspondantes sont affectées). De même, comme les dépenses "générales" constituent une consolidation des dépenses "courantes" et des dépenses de "capital", le poste des dépenses courantes relatif aux contributions au fonds de capital et d'emprunt se trouve éliminé comme étant un transfert entre fonds.

Les recettes générales comprennent ici les recettes courantes de toutes les municipalités (y compris le service des eaux) et des conseils scolaires, la contribution nette des comités municipaux et les subventions en capital des autres échelons de l'administration publique relatives aux dépenses d'investissement des municipalités et des commissions (entreprises exceptées), les commissions spécialisées et les conseils scolaires. Les dépenses générales comprennent les dépenses courantes et les dépenses de capital sans double compte en se basant sur le même univers que celui des recettes. Étant donné que les comités municipaux sont uniquement pris en compte dans la mesure où ils sont financés par les municipalités, ont déduit des recettes les transferts directs à ces organismes fait par d'autres échelons de l'administration publique, et, à un degré moindre, les autres formes de recettes accessoires.

#### Frais du service de la dette obligataire non garantie:

L'analyse du service de la dette obligataire non garantie, au tableau 4, présente les frais ayant trait à la dette obligataire non garantie des administrations locales. Étant donné que l'éducation au Nouveau-Brunswick relève du gouvernement provincial, il n'y a pas de frais du service de la dette obligataire non garantie pour les écoles de cette province. De même à Terre-Neuve, parce que les écoles sont d'abord confessionnelles et largement financées par la province, on n'enregistre aucun frais du service de dette obligataire non garantie au niveau local.

Conditional Transfers from Federal and Provincial Governments:

Conditional transfers from other levels of government, comprising grants-in-aid and shared-cost contributions of both a current and capital nature, are presented in provincial aggregate form by function. The presentation conforms both in scope and detail with that shown for prior years in the publication Local Government Finance - Actual, Catalogue 68-204. In a few cases grants are identifiable by programme rather than by function. Grants under the Local Initiatives Programme were apportioned between recreational and cultural services, and environmental health services.

Selected Metropolitan and Major Urban Areas:

In presenting the information on selected metropolitan and major urban areas, the entire municipality is included in this presentation. This is especially meaningful in the case of Regional municipalities where all local entities within the regional boundaries are included.

The decision respecting the inclusion of school boards in the selected metropolitan and major urban area compilations, where boundaries were not coterminous with the areas, was based on those boards, the areas of which most closely conformed to the selected metropolitan and major urban areas. Provincial grants to these school boards and their current expenditure are allocated provincially on a per capita basis. Similar treatment was accorded the estimated capital expenditures in Quebec, Ontario and British Columbia.

So far as possible gross revenue and expenditure of selected metropolitan and major urban areas is presented on a basis consistent with the provincial aggregates. Exceptions to this consistency occur where inter-municipal transfers can be almost entirely eliminated on consolidation for the provincial aggregate, but only partially eliminated in the aggregate for the selected metropolitan and major urban areas - e.g., county rates in Ontario.

Where adjustments were required to provincial aggregate data, to offset known bias in the estimates, a comparable adjustment was made to the selected metropolitan and major urban area data on a judgment basis.

In some instances conditional grants were available only in provincial aggregate form and are therefore omitted from compilations of selected metropolitan and major urban areas, resulting in an understatement of the ratio to provincial aggregate. This situation is accentuated in Ontario where provincial grants to conservation authorities are shown in the provincial aggregate only. Also, in Tables 13 and 16, the detail respecting the federal conditional transfers was insufficient to enable presentation of meaningful ratios except in total.

Provincial conditional transfers shown in the selected metropolitan and major urban area columns is partially lacking in detail in some instances. Where this occurs the ratio in the item "Other", may approach or exceed 100 in which case the ratio for one or more of the specified items is understated.

Transferts conditionnels provenant des administrations fédérales et provinciales:

Les transferts conditionnels versés par les autres échelons de l'administration publique au titre des dépenses courantes et d'investissement (y compris les subventions et les contributions aux programmes conjoints) sont présentés par fonction au niveau des agrégats provinciaux. La présentation est conforme en étendue et en détail à celle des années antérieures qui figure dans la publication catalogue 68-204 Finances des administrations publiques locales - Chiffres réels. Quelques subventions relèvent d'un programme et non pas d'une fonction. Les subventions au titre des "Programmes d'initiatives locales" sont réparties entre les services culturels et des loisirs et les services de santé.

Certaines régions métropolitaines et grandes agglomérations urbaines:

En présentant les renseignements sur certaines régions métropolitaines et grandes agglomérations urbaines la municipalité au complet a été prise en compte dans cette publication. Ce fait est particulièrement significatif dans le cas des municipalités régionales où toutes les agglomérations comprises dans les limites régionales sont prises en compte.

On a décidé d'inclure les conseils scolaires dans les calculs de certaines régions métropolitaines et grandes agglomérations urbaines, dont les limites n'étaient pas communes à celles des régions, parce que les régions de ces conseils se rapprochaient le plus de ces régions métropolitaines et grandes agglomérations urbaines. Les subventions provinciales accordées à ces conseils scolaires et leurs dépenses courantes ont été ventilées par province proportionnellement à la population. Les estimations des dépenses d'investissement au Québec, en Ontario et en Colombie-Britannique ont été traitées de la même façon.

Dans la mesure du possible les recettes et les dépenses brutes de certaines régions métropolitaines et des agglomérations urbaines sont présentées sur une base conforme aux agrégats provinciaux. Il y a des exceptions lorsque les transferts inter-municipaux peuvent être presque entièrement éliminés lors de la consolidation des agrégats provinciaux, mais seulement en partie pour l'agrégat relatifs à certaines régions métropolitaines et agglomérations urbaines (exemple: taux de comté en Ontario).

Lorsqu'il devenait nécessaire de rajuster les données de l'agrégat provincial, pour contrebalancer une inexactitude connue dans les estimations, on a procédé à un rajustement comparable de certaines régions métropolitaines et agglomérations urbaines à partir d'une estimation.

Dans certains cas on ne pouvait obtenir les subventions conditionnelles que sous forme d'agrégat provincial; on les a donc omises des calculs relatifs à certaines régions métropolitaines et grandes agglomérations urbaines, ce qui s'est traduit par une sous-évaluation du ratio par rapport à l'agrégat provincial. Cette particularité est plus marquée dans le cas de l'Ontario où les subventions provinciales aux autorités de conservation sont uniquement prises en compte dans l'agrégat provincial. En outre, aux tableaux 13 et 16, le détail des transferts conditionnels fédéraux était insuffisant pour permettre la présentation de rapports significatifs, sauf dans le total.

Les transferts conditionnels provinciaux qui paraissent dans les colonnes de certaines régions métropolitaines et grandes agglomérations urbaines manquent partiellement de détails dans certains cas. Dans ce cas, le rapport de la rubrique "Autres" peut se rapprocher de 100 ou les dépasser et dans ce cas, le rapport d'une ou de plusieurs rubriques est sous-évalué.

### SYMBOLS

The following standard symbols are used in Statistics Canada publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- amount too small to be expressed.
- P preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

### SIGNES CONVENTIONNELS

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- .. nombres indisponibles.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- nombres infimes.
- P nombres provisoires.
- r nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

## INTRODUCTION

This report is the eighteenth in an annual series presenting estimated revenue and expenditure of local governments. For a variety of reasons actual data on local government financial transactions cannot be produced until some considerable time after the year to which they apply. This interim report, therefore, presents more up to date information than is available in the companion publication Local Government Finance, Actual, Catalogue 68-204.

The 18 years during which these reports have been issued have witnessed a multitude of changes in the roles assigned to local governments, in their structures and methods of operation, in the concepts and classifications governing their financial reporting and in their ability to report on their financial transactions. These developments have been reflected in this series of publications generally as they occurred since there was no point in time when all these major factors seemed likely to stabilize. The result is that there are many discontinuities within the series; some of the more important in recent years have been:

1966 and 1967 - Revenue and expenditure data for municipalities within the Yukon and Northwest Territories and for municipalities within selected Census Metropolitan Areas were included for the first time.

1967 and 1968 - Rearrangement of items to show revenue from own sources and cost of services provided was introduced. Estimated revenue and expenditure formerly presented on a "current" basis were now shown on a "gross" basis. The functional classification of conditional grants was introduced. The Census Metropolitan Area presentation was extended to 17 CMA's and data on Census Major Urban Areas introduced representing all regions except those in the Province of Quebec.

1968 and 1969 - Financial statistics on school boards were included in their entirety, whereas in prior years they were included only to the extent of their financing by municipalities. Waterworks were included for the first time as an integral part of the general services provided by local government. Census Metropolitan Area and Major Urban Area statistics for those areas within the Province of Quebec were also included to complete this form of presentation. The substantial values previously shown as "other revenue", were presented in detail.

1969 and 1970 - Capital expenditure of municipally owned hospitals were added as a preliminary first stage in the measurement of this activity.

1970 and 1971 - Tables of gross debenture debt outstanding were dropped from the presentation due to difficulties encountered in estimating. Data on this subject is, however, available in the companion publication Local Government Finance - Actual, Statistics Canada, Catalogue 68-204.

1971 and 1972 - This edition incorporated the concepts and classifications of local governments and local government financial reporting described in A Financial Information System for Municipalities, Catalogue 12-532, 12-533 and 12-534. These volumes, which resulted from the work of the Eighth Federal-Provincial Conference on Municipal Financial Statistics, were issued by Statistics Canada late in 1970 and replaced the Municipal Finance Reporting Manual published a decade earlier, which formed the basis for previous editions of this publication.

Cette publication est la dix-huitième d'une série annuelle sur les recettes et les dépenses estimatives des administrations locales. Pour diverses raisons, les données actuelles sur les transactions financières des administrations locales ne peuvent être présentées que longtemps après l'année qu'elles visent. Par conséquent, cette publication provisoire présente davantage de renseignements à jour que ne le fait la publication complémentaire n° 68-204 au catalogue Finances des administrations publiques locales. Chiffres réels.

Au cours des 18 années de parution de ces publications, on a constaté de nombreux changements du rôle attribué aux administrations locales, de leurs méthodes d'administration, des concepts et des classifications applicables à leurs rapports financiers, en même temps qu'évoluaient leur capacité à présenter leurs opérations financières. En général, ces changements ont été pris en compte dans la présente série à mesure qu'ils se produisaient puisqu'il semblait peu probable que ces facteurs importants se stabilisent à un moment donné. Il y a donc de nombreuses solutions de continuité dans la série; en voici quelques-unes parmi les plus importantes:

1966 et 1967 - Les données sur les recettes et les dépenses pour les municipalités du Yukon et des Territoires du Nord-Ouest et pour certaines municipalités des régions métropolitaines de recensement ont été prises en compte pour la première fois.

1967 et 1968 - On a redispisé les rubriques de manière à indiquer les recettes de sources propres et le coût des services fournis. La présentation des recettes et des dépenses estimatives autrefois sur une base courante se fait désormais sur une base brute. On a introduit la classification fonctionnelle des subventions conditionnelles. La présentation par région métropolitaine de recensement est passée à 17 R.M.R. et les données sur des grandes agglomérations urbaines de recensement sont apparues, représentant toutes les régions à l'exception de celles de la province de Québec.

1968 et 1969 - La statistique financière des conseils scolaires a été prise en compte intégralement alors que les années précédentes, les données figuraient uniquement dans la mesure où ces conseils étaient financés par les municipalités. Les services des eaux y sont apparus pour la première fois comme partie intégrante des services généraux fournis par les administrations locales. En outre, la statistique relative aux régions métropolitaines de recensement et aux grandes agglomérations urbaines de recensement a été complétée grâce à l'introduction de toutes les R.M.R. et des G.A.U.R. du Québec. Les montants importants présentés auparavant comme "autres recettes" sont désormais détaillés.

1969 et 1970 - On a, comme première tentative de mesure de cette activité, ajouté les dépenses d'investissement des hôpitaux appartenant aux municipalités.

1970 et 1971 - On ne présente plus les tableaux de frais du service de la dette obligatoire non garantie en cours en raison des difficultés d'estimation. On peut toutefois se procurer des données sur ce sujet dans la publication complémentaire n° 68-204 au catalogue Finances des administrations publiques locales. Chiffres réels.

1971 et 1972 - La présente édition regroupe les concepts et les classifications des administrations locales et les rapports financiers des administrations locales décrits dans les publications de la série Système d'information financière à l'usage des corporations municipales, (n° 12-532F, 12-533F et 12-534F au catalogue). Ces ouvrages de Statistique Canada, fruit de la huitième Conférence fédérale-provinciale sur les statistiques financières des municipalités, sont sortis à la fin de 1970 et remplacent le Manuel de déclaration des finances municipales, publié il y a dix ans, et qui a servi de base aux éditions précédentes de la présente publication.

1972 and 1973 - A number of changes were introduced with this issue of the publication. Current revenue and expenditure of local government hospitals were introduced for the first time. "Sales of service - other" includes direct income from patients, other than that paid by the provincial insurance plan. The latter is treated as a provincial specific purpose transfer and expenditure of these hospitals is recorded under hospital care. Due to improved analysis, revenue received by recreation commissions for services provided is also recorded under "sales and services - other".

In Quebec, sales and services for water, formerly included in special assessments are now included in sales and services "water", again as a result of improved information. A break in the series occurs in 1972 and 1973 based on a tentative decision that social welfare services in Montreal were administered by the city of Montreal and assisted by a 100% grant from the province. This does not constitute a change in policy but a change in statistical presentation.

1973 and 1974 - In prior years difficulties were encountered in attempting to produce metropolitan area statistics because the metropolitan areas defined by the census field frequently conflicted with the administrative boundaries of local government structures. This was encountered more and more with the introduction of regional municipalities. None of the Census Metropolitan Areas nor the census agglomerations were exactly co-terminous with the new regions. For these reasons it was decided to define a grouping of local governments within a Census Metropolitan Area as an "Urban Region". Such an urban region consists of a regional government, plus any or all other local governments which do not form part of the regional government, but are wholly or mainly within its territory. If more than one regional government exists within a metropolitan area, each such government is classified as a separate urban region.

Where no regional government exists, the urban region is classified as the local government comprising the complete Census Metropolitan Area; except that if the municipalities lying within the Census Metropolitan Area, include significant rural areas, then the urban region shall be the local governments in the urbanized census sub-division within the Census Metropolitan Area, or where such sub-division extends beyond the Census Metropolitan Area, the urban region shall be the core city or cities of the CMA and the other local governments wholly or mainly within that core.

The tentative decision regarding social welfare services instituted in the 1972-1973 report was reversed in this publication. The 100% payment from the province is a reimbursement of expenditure to the city of Montreal for the administrative expenses of the social welfare program under the jurisdiction of the province, and the city only acts in an administrative capacity in making the payments to the welfare recipients.

The format for Table 4, analysis of debt charges on debentures issued by municipalities has changed slightly from previous publications but has been made comparable with the presentation in the publication Local Government Finance, Actual, Catalogue 68-204, Table 2.

The classification systems incorporated in A Financial Information System for Municipalities show many differences from those in the earlier manual and the reader is advised to consult the new publication to become fully aware of the nature and extent of these changes since it is impractical to describe them in detail here.

1972 et 1973 - Un certain nombre de modifications ont été apportées à la présente édition. Les recettes et les dépenses courantes des hôpitaux municipaux étaient présentées pour la première fois. Les "ventes de services - autres" prennent en compte le revenu direct des malades, autre que celui versé par les régimes d'assurance provinciaux. Ces derniers sont traités comme des transferts provinciaux à usage précis et les dépenses de ces hôpitaux sont enregistrées sous la rubrique consacrée aux soins médicaux. Grâce à une analyse plus poussée, les recettes des commissions récréatives au titre des services fournis sont aussi regroupées sous la rubrique "ventes de services - autres".

Au Québec, les ventes des services d'approvisionnement d'eau, qui figuraient auparavant sous une rubrique spéciale, sont maintenant pris en compte dans les ventes des services "Approvisionnement d'eau", grâce également à des renseignements de meilleure qualité. Il y a solution de continuité dans les séries en 1972 et en 1973 par suite d'une décision de caractère provisoire intéressant les services de bien-être social de la ville de Montréal que l'on juge administrés par la ville et subventionnés à 100 % par la province. Il ne s'agit pas là d'un changement de politique, mais d'une simple modification de la présentation statistique.

1973 et 1974 - Dans les années passées, il a été difficile de produire des statistiques sur les régions métropolitaines, car les régions métropolitaines définies au recensement ne s'identifiaient pas toujours aux frontières administratives des administrations locales. Le problème s'est accru avec l'introduction des municipalités régionales, puisque ni les régions métropolitaines de recensement ni les agglomérations urbaines ne coïncidaient exactement avec ces nouvelles régions. On a alors décidé de créer une nouvelle unité, l'agglomération urbaine, qui comprendrait un groupe d'administrations locales au sein d'une région métropolitaine de recensement. L'agglomération urbaine se compose d'une administration régionale et de toute autre administration locale non comprise dans cette dernière, mais qui se situe entièrement ou principalement à l'intérieur de son territoire. S'il y a plus d'une administration régionale dans une région métropolitaine, chacune constitue une agglomération urbaine distincte.

Lorsqu'il n'existe aucune administration régionale, on classe l'agglomération urbaine comme administration locale englobant toute la région métropolitaine de recensement; par contre, si les municipalités qui se trouvent à l'intérieur de la région métropolitaine de recensement comprennent des régions rurales importantes, l'agglomération urbaine est alors constituée des administrations locales situées dans la subdivision de recensement urbanisée, celle-ci étant à son tour comprise dans la région métropolitaine de recensement. Si cette subdivision dépasse les limites de la région métropolitaine de recensement, l'agglomération urbaine est la ou les villes principales de l'A.M.R., les autres administrations locales étant situées entièrement ou principalement à l'intérieur de ce noyau de villes.

La décision provisoire concernant les services de bien-être social introduits dans le bulletin pour 1972-1973 n'a pas été maintenue pour la présente publication. Le paiement intégral effectué par la province constitue un remboursement des frais administratifs engagés par la ville de Montréal dans le cadre de son programme de bien-être social qui est sous régie provinciale. La ville n'agit qu'à titre d'intermédiaire administratif en distribuant les prestations aux bénéficiaires.

Nous avons légèrement modifié la présentation du tableau 4, qui présente une analyse des frais de la dette au titre des obligations non garanties émises par les municipalités; nous l'avons rendue comparable à celle adoptée dans la publication n° 68-204 au catalogue intitulée Finances des administrations publiques locales, chiffres réels, au tableau 2.

Les systèmes de classification publiés dans la série de publications intitulée Système d'information financière à l'usage des corporations municipales diffèrent sensiblement de ceux de l'ancien manuel, et l'on conseille au lecteur de consulter les nouvelles publications pour prendre pleinement connaissance de la nature et de l'étendu de ces variations puisqu'il serait peu pratique de les décrire ici en détail.

It is recognized that the discontinuities mentioned above preclude the use of data in this publication or its "Actual" companion, for the construction and analysis of time series of local government data. There are indications that the period of rapid change and development is passing and the Public Finance Division is planning to revise financial statistics for all levels of government for the past decade to conform with current concepts, classifications and coverage. However, the revision process itself is likely to be a lengthy exercise; several years are likely to pass, therefore, before revised data can be made available.

Statistics Canada assigns local government entities to three principal categories - municipalities, special purpose boards and local school boards. Municipalities, whether regional or unitary may delegate authority to provide certain services to semi-autonomous boards or commissions which Statistics Canada classifies as enterprise, institutional or other. Frequently such boards will be the joint creations of a number of municipalities. Quasi-municipalities, administered by provincially-appointed boards or commissions, are regarded as municipalities because they provide limited municipal services to areas that would otherwise be considered unorganized territory. Special purpose boards are also created by provincial governments to provide services of a local nature to areas which usually embrace more than one municipality; examples are regional library boards, conservation authorities, etc. School boards are closely allied to municipalities in that, in many instances, a large part of the financing is provided through the municipality and in some cases, the school board is formed from a committee of council. Although the quality and quantity of service provided by school boards is controlled by the provincial government, there is a strong local element of administration; Statistics Canada therefore considers school boards as a major component of local government.

The financial statistics presented herein are for municipalities (including waterworks), school boards and joint boards in their entirety; the remaining municipal boards, and special purpose boards are included to the extent to which they are financed by municipalities. Also to maintain uniformity, as near as possible, between provinces and to adhere to the concept of "gross revenue" and "gross expenditure (cost of services provided)", capital expenditures and relative provincial grants are included for municipalities, school boards and for special purpose boards that could be identified and for all conservation authorities in Ontario.

In the main the data in this report refers to the calendar year, but in a few cases it has been necessary to use the financial period nearest to December 31.

#### Estimating Procedures

The estimates presented as "Preliminary" for 1973 and "Estimated" for 1974 in this publication were obtained by projection of 1971 information as published in Local Government Finance - Actual, Catalogue 68-204 on the trends established by survey. The data was collected and assembled, however, within the framework of the new manual (as described above).

Municipalities included in the survey were selected on the basis of two criteria.

- (1) Municipalities considered unique and therefore not representative were selected to be surveyed on a full coverage basis. This group included all municipalities in urban regions most remaining cities, and other municipalities which constituted extremes during the process of forming homogeneous groups prior to sample selection.

Il est évident que les solutions de continuité mentionnées ci-dessus empêchent l'usage de données dans cette publication, ou dans la publication complémentaire "chiffres réels", en ce qui concerne la construction et l'analyse des séries chronologiques de données sur les administrations locales. La période de changement et de modification rapides semble diminuer et la Division des finances publiques envisage la révision de toute la statistique financière pour tous les échelons de l'administration publique depuis dix ans conformément à la base, aux concepts et aux classifications courants. Toutefois, le processus de révision lui-même sera probablement très long; par conséquent, plusieurs années peuvent s'écouler avant que les données ne soient accessibles.

Statistique Canada classe les administrations locales en trois grandes catégories: les municipalités, les commissions spécialisées et les conseils scolaires. Les municipalités, qu'il s'agisse de communautés urbaines ou de municipalités proprement dites, peuvent déléguer leurs pouvoirs pour fournir certains services, à des commissions ou des conseils semi-autonomes que Statistique Canada considère comme entreprises de divers ordres. Souvent ces conseils sont des créations mixtes d'un groupe de municipalités. Les quasi-municipalités administrées par des conseils ou des commissions nommées par la province sont considérées comme municipalités parce qu'elles assument des fonctions de compétence municipale dans les régions qui autrement seraient considérées comme territoriales non municipalisées. Les administrations provinciales mettent aussi sur pied des commissions spécialisées dans le but d'assurer un service particulier dans une région qui englobe plus d'une municipalité (commission régionales de bibliothèques, organismes de conservation, etc.). La relation entre les conseils scolaires et les municipalités est très étroite du fait que dans nombre de cas, le financement des premiers est largement assuré par les seconds, et que dans certains cas, le conseil scolaire procède d'un comité du conseil municipal. Bien que la province ait un droit de regard sur la qualité et la quantité des services assurés par un conseil scolaire, la part d'administration locale est considérable. Par conséquent, Statistique Canada considère les conseils scolaires comme un élément important de l'administration locale.

La statistique financière présentée ici est donc celle des municipalités (y compris les services des eaux), des conseils scolaires et des comités mixtes dans leur totalité; les autres commissions municipales et commissions spécialisées ne sont comprises que dans la mesure où elles sont financées par une municipalité. Afin de respecter, autant que possible, l'uniformité d'une province à l'autre et d'adhérer à la notion de "recettes brutes" et de "dépenses brutes (coût des services fournis)", les dépenses d'investissement et les subventions provinciales correspondantes ont été prises en compte pour toutes les municipalités, tous les conseils scolaires et toutes les commissions spécialisées qu'il a été possible d'identifier, ainsi que pour toutes les autorités dirigées de conservation en Ontario.

En général, les données présentées ici se rapportent à l'année civile, mais dans quelques cas, il a été nécessaire d'utiliser la période financière qui se terminait le plus près du 31 décembre.

#### Méthodes d'estimation

Les estimations présentées ici comme "chiffres préliminaires" pour 1973 et "estimations" pour 1974 sont tirées de la projection des chiffres de 1971 qui figurent dans Finances des administrations publiques locales - Chiffres réels, n° 68-204 au catalogue conformément aux tendances observées à l'enquête que Statistique Canada a menée. Toutefois les données ont été recueillies et assemblées dans le cadre du manuel, comme il a été dit ci-dessus.

Lors du choix des municipalités on s'est servi de deux critères.

- (1) Dans le cas des municipalités considérées comme uniques, donc en constituant pas des exemples typiques, on a procédé à une enquête exhaustive, faisant partie de cette catégorie: toutes les municipalités dans des régions urbaines, la plupart des villes restantes, et les autres municipalités constituant des cas extrêmes au moment de la formation de groupes homogènes qui a précédé le tirage de l'échantillon.

(2) The remaining municipalities were grouped essentially by type of corporation (cities, towns, villages, etc.) within each province with some groups sub-divided into size strata where required. From these homogeneous groups sample municipalities were selected on a random basis with representation weighted by the proportion of the group to the respective provincial aggregate of total expenditures.

Basically, the method of projection was to apply the percentage change in sample data to current year, to the total data for the base year. This link or index of change was computed and applied for each item of revenue, expenditure, etc., within each sample group.

The estimates derived from data provided by those selected as sample municipalities were added to the estimates provided by the self-representing municipalities to arrive at projected revenue and expenditure comparable in scope to the Department of Municipal Affairs base data. These estimates on a provincial aggregate basis were then adjusted to compensate for portions of local government not represented by the survey and also to make the estimates comparable in scope with the "actual" series as published for 1971.

Capital expenditures were derived from the same survey, but a different estimating technique was employed. Although the same sample composition was observed, the estimates derived from sample municipalities were tempered by supporting information respecting capital expenditure programmes and works contract data.

#### Limitations

Although the specific items of revenue and expenditure are common to nearly all municipalities, their relative significance within the financial structure of each municipality differs to varying degrees. As an example towns of a comparable size in a given area might all have "real property tax" and "licences and permits" revenue. The proportion of these items of revenue to their respective total revenue could vary from one town to another within the group - indeed, it might be expected that the proportion of "licences and permits" would vary significantly. Therefore, the sample representation varies between items of revenue and expenditure and the quality of the estimates varies accordingly. Items which form a stable proportion of revenue or expenditure for a sample group of municipalities have a higher degree of accuracy or reliability than others. This inadequacy of the sample to be totally representative was recognized and special attention was given during the compilation to minimize errors resulting from under-representation of this nature. Such errors of sampling vary from item to item; however, the sample element forms only a part of the provincial total and hence the error in the provincial total of a particular item is relatively insignificant.

#### General Revenue and Expenditure

General revenue and expenditure infers the "gross" concept which is used in this publication to conform with the publications for the other levels of government. General revenue includes all revenue regardless of source; general expenditure includes all current and capital expenditures without duplication. To avoid duplication, outlays for the acquisition of fixed assets are reflected at the point in time at which the fixed asset is acquired rather than when any loan in this respect is repaid (municipal accounting conventions treat the repayment of long-term loans as an expenditure in the year in which the revenue is provided for this purpose). Also as the "general" presentation constitutes a consolidation of the "current" and "capital" funds, the current expenditure item "contributions to the capital and loan fund" is eliminated as an inter-fund transfer.

(2) Les autres municipalités ont été groupées essentiellement par type (villes, villages, etc.) dans chaque province et, au besoin, certains groupes ont été subdivisés en strates (selon la taille). De ces groupes homogènes, on a tiré au hasard des municipalités-échantillons qui sont elles-mêmes pondérées en fonction de la part du groupe dans l'agrégat provincial des dépenses totales.

La méthode fondamentale de projection consistait à appliquer aux données totales de l'année de base le taux de variation calculé pour l'échantillon entre l'année de base et l'année observée. Ce rapport, ou indice de variation, a été calculé et appliqué à chaque poste des recettes, des dépenses, etc., pour chaque groupe de l'échantillon.

Les estimations établies à partir des données fournies par les municipalités échantillonnées ont été ajoutées à celles des municipalités autoreprésentatives afin d'en arriver à des projections des recettes et des dépenses qui aient une portée comparable à celle des données de base du ministère des Affaires municipales. Ces estimations fondées sur les agrégats provinciaux ont alors été ajustées de manière à tenir compte des éléments de l'administration locale exclus de l'enquête et de façon à aligner ces estimations dans les limites utilisées dans la série des "chiffres réels" publié pour 1971.

Les dépenses d'investissement ont été tirées de la même enquête, mais par une méthode d'estimation différente. Bien que la composition de l'échantillon ait été la même, on a pondéré les estimations établies pour les municipalités échantillonnées en s'appuyant sur des chiffres tirés des programmes d'investissement et des marchés de travaux.

#### Limites

Bien que pour la très grande majorité des municipalités les postes des recettes et des dépenses soient identiques, leur importance relative au sein de la structure financière de chaque municipalité varie largement. Ainsi, dans une région donnée, les villes de taille comparable pourront avoir des recettes provenant des "impôts fonciers" et des "licences et permis", mais la proportion de ces postes par rapport à l'ensemble des recettes peut très bien varier d'une ville à l'autre; de fait, il est vraisemblable que la proportion respective des "licences et permis" varie considérablement. La représentativité des postes de recettes et de dépenses de l'échantillon est donc sujette à varier et la qualité des estimations s'en trouve touchée d'autant. Les postes qui constituent une part constante des recettes ou des dépenses pour un certain échantillon de municipalités comportent un degré plus élevé d'exactitude ou de fiabilité que les autres. Comme on savait que l'échantillon ne pouvait être totalement représentatif, on s'est efforcé, au moment d'exploiter les données, de réduire le plus possible l'effet des erreurs dues à ce manque de représentativité. Les erreurs d'échantillonnage de ce genre varient d'un poste à l'autre; toutefois, comme les données provenant de l'échantillon ne constituent qu'une partie du total provincial, l'erreur pour un poste donné est donc relativement négligeable au niveau de l'ensemble de la province.

#### Recettes et dépenses générales

Les recettes et les dépenses générales impliquent le concept de recettes et de dépenses "brutes" utilisé dans cette publication de manière à aligner les chiffres présentés ici sur les données figurant dans les publications consacrées aux autres échelons de l'administration publique. Les recettes générales comprennent toutes les dépenses courantes et toutes les dépenses d'investissement, chaque dépense n'étant prise en compte qu'une seule fois. Pour éviter qu'une même somme soit prise en compte deux fois dans le calcul des dépenses générales, le coût d'acquisition des immobilisations est pris en compte au moment de l'acquisition et non pas lors du remboursement d'un emprunt contracté à cette fin. (Par convention, la comptabilité municipale impute le remboursement d'une dette à long terme aux dépenses de l'année même pour laquelle les recettes correspondantes sont affectées). De même, comme les dépenses "générales" constituent une consolidation des dépenses "courantes" et des dépenses de "capital", le poste des dépenses courantes relatif aux contributions au fonds de capital et d'emprunt se trouve éliminé comme étant un transfert entre fonds.

General revenue in this publication includes all current revenue of all municipalities (including water-works) school boards and the net contributions from municipal boards, together with capital grants from other levels of government respecting all capital expenditures of municipalities and their boards (except enterprises), special purpose boards and school boards. General expenditure comprises current and capital expenditures without duplication including the same coverage of the local government universe as the revenue. Because municipal boards are included only to the extent of their financing by municipalities, the revenues are understated by the amount of direct transfers to these entities from other levels of government and to a lesser extent by other incidental forms of revenue.

#### Debenture Debt Charges

The analysis of debenture debt charges shown in Table 4 is a presentation of the charges relative to the gross debenture debt of local government. Due to the fact that the responsibility for education rests with the provincial government in New Brunswick there are no debenture debt charges for schools in this province. Likewise in Newfoundland as the schools are primarily denominational and largely financed by the province, no debenture debt charges are recorded at the local level.

#### Specific Purpose Transfers from Federal and Provincial Governments

Specific Purpose transfers from other levels of government, comprising grants-in-aid and shared-cost contributions of both a current and capital nature, are presented in provincial aggregate form by function. The presentation conforms both in scope and detail with that shown for prior years in the publication Local Government Finance - Actual, Catalogue 68-204. In a few cases grants are identifiable by programme rather than by function. Grants under the Local Initiatives Programme were apportioned between recreational and cultural services, and environmental development services.

#### Urban Regions

In presenting the information on urban regions, the entire municipality was included in this presentation. This is especially meaningful in the case of regional municipalities where all local entities within the regional boundaries are included in this presentation.

The decision respecting the inclusion of school boards in the major urban region compilations where boundaries were not coterminous with the areas was based on those boards, the areas of which most closely conformed to the selected urban regions. Provincial grants to these school boards and their current expenditure were allocated provincially on a per capita basis. Similar treatment was accorded the estimated, capital expenditure in Quebec, Ontario and British Columbia.

So far as possible gross revenue and expenditure of urban regions is presented on a basis consistent with the provincial aggregates. Exceptions to this consistency occur where inter-municipal transfers can be almost entirely eliminated on consolidation for the provincial aggregate, but only partially eliminated in the aggregate for the selected urban regions - e.g., county rates in Ontario.

Where adjustments were required to provincial aggregate data, to offset known bias in the estimates, a comparable adjustment was made to the selected urban regions on a judgement basis.

Les recettes générales comprennent ici les recettes courantes de toutes les municipalités (y compris le service des eaux) et des conseils scolaires, la contribution nette des comités municipaux et les subventions en capital des autres échelons de l'administration publique relatives aux dépenses d'investissement des municipalités et des commissions (entreprises exceptées), les commissions spécialisées et les conseils scolaires. Les dépenses générales comprennent les dépenses courantes et les dépenses de capital sans double compte en se basant sur le même univers que celui des recettes. Étant donné que les comités municipaux sont uniquement pris en compte dans la mesure où ils sont financés par les municipalités, ont déduit des recettes les transferts directs à ces organismes faits par d'autres échelons de l'administration publique, et, à un degré moindre, les autres formes de recettes accessoires.

#### Frais du service de la dette obligataire non garantie

L'analyse du service de la dette obligataire non garantie, au tableau 4, présente les frais ayant trait à la dette obligataire non garantie des administrations locales. Étant donné que l'éducation au Nouveau-Brunswick relève du gouvernement provincial, il n'y a pas de frais du service de la dette obligataire non garantie pour les écoles de cette province. De même à Terre-Neuve, parce que les écoles sont d'abord confessionnelles et largement financées par la province, on n'enregistre aucun frais du service de dette obligataire non garantie au niveau local.

#### Transferts à usage précis provenant des administrations fédérales et provinciales

Les transferts à usage précis par les autres échelons de l'administration publique au titre des dépenses courantes et d'investissement (y compris les subventions et les contributions aux programmes conjoints) sont présentés par fonction au niveau des agrégats provinciaux. La présentation est conforme en étendue et en détail à celle des années antérieures qui figure dans la publication n° 68-204 au catalogue Finances des administrations publiques locales - Chiffres réels. Quelques subventions relèvent d'un programme et non pas d'une fonction. Les subventions au titre des "Programmes d'initiatives locales" sont réparties entre les services culturels et des loisirs et les services d'urbanisme, d'aménagement et de mis en valeur de territoire.

#### Régions urbaines

En présentant les renseignements sur les régions urbaines, la municipalité au complet a été prise en compte dans cette publication. Ce fait est particulièrement significatif dans le cas des municipalités régionales où toutes les agglomérations comprises dans les limites régionales sont prises en compte.

On a décidé d'inclure les conseils scolaires dans les calculs des grandes régions urbaines, dont les limites n'étaient pas communes à celles des régions, parce que les régions de ces conseils se rapprochaient le plus de ces régions urbaines. Les subventions provinciales accordées à ces conseils scolaires et leurs dépenses courantes ont été ventilées par province proportionnellement à la population. Les estimations des dépenses d'investissement au Québec, en Ontario et en Colombie-Britannique ont été traitées de la même façon.

Dans la mesure du possible les recettes et les dépenses brutes des régions urbaines sont présentées sur une base conforme aux agrégats provinciaux. Il y a des exceptions lorsque les transferts intermunicipaux peuvent être presque entièrement éliminés lors de la consolidation des agrégats provinciaux, mais seulement en partie pour l'agrégat relatif à certaines régions urbaines (par exemple, taux de comté en Ontario).

Lorsqu'il devenait nécessaire de rajuster les données de l'agrégat provincial, pour contrebalancer une inexactitude connue dans les estimations, on a procédé à un rajustement comparable de certaines régions urbaines à partir d'une estimation.

In some instances specific purpose grants are available only in provincial aggregate form and are therefore omitted from compilation of selected urban regions, resulting in an understatement of the ratio to provincial aggregate. This situation is accentuated in Ontario where provincial grants to conservation authorities are shown in the provincial aggregate only. Also in Tables 13 and 16, the detail respecting the federal specific purpose transfers was insufficient to enable presentation of meaningful ratios except in total.

Provincial specific purpose transfers shown in the selected urban region columns is partially lacking in detail in some instances. Where this occurs the ratio in the item "other", may approach or exceed 100 in which case the ratio for one or more of the specified items is understated.

As certain regional municipalities in Ontario came into being on January 1, 1974, the 1973 preliminary data recorded herein for the urban regions of Durham, Halton, Hamilton and Peel have been compiled on a basis resembling, as closely as possible, that of the 1974 estimates in order to obtain comparative data during this transition period.

The regional municipality of Haldimand-Norfolk formed on April 1, 1974 is not included in this compilation.

The urban regions and their constituent municipalities are shown in the following list. Where available the 1971 census population figures for each, and the proportions to their respective provincial totals follow. In the case of those regional governments formed in Ontario in 1974, where the 1971 Census figures did not apply, the population figures as published in the 1974 Municipal Directory of the Ministry of Treasury, Economics and Intergovernmental Affairs were used.

Dans certains cas, on ne pouvait obtenir les subventions à usage précis que sous forme d'agrégat provincial; on les a donc omises des calculs relatifs à certaines régions urbaines, ce qui s'est traduit par une sous-évaluation du ratio par rapport à l'agrégat provincial. Cette particularité est plus marquée dans le cas de l'Ontario où les subventions provinciales aux services de conservation sont uniquement prises en compte dans l'agrégat provincial. En outre, aux tableaux 13 et 16, le détail des transferts fédéraux à usage précis était insuffisant pour permettre la présentation de rapports significatifs, sauf dans le total.

Les transferts à usage précis figurant dans les colonnes de certaines régions urbaines manquent partiellement de détail dans certains cas. Lorsque cela se produit, le rapport de la rubrique "autres" peut se rapprocher de 100 ou le dépasser, ce qui amène une sous-évaluation d'une ou de plusieurs rubriques.

Puisque certaines municipalités régionales en Ontario, ont pris forme le 1<sup>er</sup> janvier 1974, les chiffres préliminaires de 1973, présentés dans cette publication pour les régions urbaines de Durham, Halton, Hamilton et Peel ont été calculés sur une base aussi semblable que possible à celle des estimations de 1974, afin d'obtenir des données comparatives pendant cette période de transition.

La municipalité régionale de Haldimand-Norfolk qui a été formée le 1<sup>er</sup> avril, 1974 n'est pas incluse dans cette compilation.

Les régions urbaines et leurs municipalités constituant figurent dans la liste qui suit. Lorsque les données étaient disponibles, on a indiqué les chiffres de population du recensement de 1971 pour chacune et le pourcentage qu'elles représentaient, par rapport à la population totale de leur province respective. Dans le cas des administrations régionales de l'Ontario créées en 1974, on s'est servi à défaut des chiffres du recensement, des renseignements contenus dans l'Annuaire municipal de 1974 du ministère du Trésor, de l'Economie et Affaires intergouvernementales.

## INTRODUCTION

This report is the nineteenth in an annual series presenting estimated revenue and expenditure of local governments. For a variety of reasons actual data on local government financial transactions cannot be produced until some considerable time after the year to which they apply. This interim report, therefore, presents more up to date information than is available in the companion publication Local Government Finance - Actual, Catalogue 68-204.

The 19 years during which these reports have been issued have witnessed a multitude of changes in the roles assigned to local governments, in their structures and methods of operation, in the concepts and classifications governing their financial reporting and in their ability to report on their financial transactions. These developments have been reflected in this series of publications generally as they occurred since there was no point in time when all these major factors seemed likely to stabilize. The result is that there are many discontinuities within the series; some of the more important in recent years have been:

1966 and 1967 - Revenue and expenditure data for municipalities within the Yukon and Northwest Territories and for municipalities within selected Census Metropolitan Areas were included for the first time.

1967 and 1968 - Rearrangement of items to show revenue from own sources and cost of services provided was introduced. Estimated revenue and expenditure formerly presented on a "current" basis were now shown on a "gross" basis. The functional classification of conditional grants was introduced. The Census Metropolitan Area presentation was extended to 17 CMA's and data on Census Major Urban Areas introduced representing all regions except those in the Province of Quebec.

1968 and 1969 - Financial statistics on school boards were included in their entirety, whereas in prior years they were included only to the extent of their financing by municipalities. Waterworks were included for the first time as an integral part of the general services provided by local government. Census Metropolitan Area and Major Urban Area statistics for those areas within the Province of Quebec were also included to complete this form of presentation. The substantial values previously shown as "other revenue", were presented in detail.

1969 and 1970 - Capital expenditure of municipally owned hospitals were added as a preliminary first stage in the measurement of this activity.

1970 and 1971 - Tables of gross debenture debt outstanding were dropped from the presentation due to difficulties encountered in estimating. Data on this subject is, however, available in the companion publication Local Government Finance - Actual, Statistics Canada, Catalogue 68-204.

1971 and 1972 - This edition incorporated the concepts and classifications of local governments and local government financial reporting described in A Financial Information System for Municipalities, Catalogue 12-532, 12-533 and 12-534. These volumes, which resulted from the work of the Eighth Federal-Provincial Conference on Municipal Financial Statistics, were issued by Statistics Canada late in 1970 and replaced the Municipal Finance Reporting Manual published a decade earlier, which formed the basis for previous editions of this publication.

Cette publication est la dix-neuvième d'une série annuelle sur les recettes et les dépenses estimatives des administrations locales. Pour diverses raisons, les données actuelles sur les transactions financières des administrations locales ne peuvent être présentées que longtemps après l'année qu'elles visent. Par conséquent, cette publication provisoire présente davantage de renseignements à jour que ne le fait la publication complémentaire n° 68-204 au catalogue Finances des administrations publiques locales - Chiffres réels.

Au cours des 19 années de parution de ces publications, on a constaté de nombreux changements du rôle attribué aux administrations locales, de leurs méthodes d'administration, des concepts et des classifications applicables à leurs rapports financiers, en même temps qu'évoluaient leur capacité à présenter leurs opérations financières. En général, ces changements ont été pris en compte dans la présente série à mesure qu'ils se produisaient puisqu'il semblait peu probable que ces facteurs importants se stabilisent à un moment donné. Il y a donc de nombreuses solutions de continuité dans la série; en voici quelques-unes parmi les plus importantes:

1966 et 1967 - Les données sur les recettes et les dépenses pour les municipalités du Yukon et des Territoires du Nord-Ouest et pour certaines municipalités des régions métropolitaines de recensement ont été prises en compte pour la première fois.

1967 et 1968 - On a redressé les rubriques de manière à indiquer les recettes de sources propres et le coût des services fournis. La présentation des recettes et des dépenses estimatives autrefois sur une base courante se fait désormais sur une base brute. On a introduit la classification fonctionnelle des subventions conditionnelles. La présentation par région métropolitaine de recensement est passée à 17 R.M.R. et les données sur des grandes agglomérations urbaines de recensement sont apparues, représentant toutes les régions à l'exception de celles de la province de Québec.

1968 et 1969 - La statistique financière des conseils scolaires a été prise en compte intégralement alors que les années précédentes, les données figuraient uniquement dans la mesure où ces conseils étaient financés par les municipalités. Les services des eaux y sont apparus pour la première fois comme partie intégrante des services généraux fournis par les administrations locales. En outre, la statistique relative aux régions métropolitaines de recensement et aux grandes agglomérations urbaines de recensement a été complétée grâce à l'introduction de toutes les R.M.R. et des G.A.U.R. du Québec. Les montants importants présentés auparavant comme "autres recettes" sont désormais détaillés.

1969 et 1970 - On a, comme première tentative de mesure de cette activité, ajouté les dépenses d'investissement des hôpitaux appartenant aux municipalités.

1970 et 1971 - On ne présente plus les tableaux de frais du service de la dette obligataire non garantie en cours en raison des difficultés d'estimation. On peut toutefois se procurer des données sur ce sujet dans la publication complémentaire n° 68-204 au catalogue Finances des administrations publiques locales - Chiffres réels.

1971 et 1972 - La présente édition regroupe les concepts et les classifications des administrations locales et les rapports financiers des administrations locales décrits dans les publications de la série Système d'information financière à l'usage des corporations municipales, (nos 12-532F, 12-533F et 12-534F au catalogue). Ces ouvrages de Statistique Canada, fruit de la huitième Conférence fédérale-provinciale sur les statistiques financières des municipalités, sont sortis à la fin de 1970 et remplacent le Manuel de déclaration des finances municipales, publié il y a dix ans, et qui a servi de base aux éditions précédentes de la présente publication.

1972 and 1973 - A number of changes were introduced with this issue of the publication. Current revenue and expenditure of local government hospitals were introduced for the first time. "sales of service - other" includes direct income from patients, other than that paid by the provincial insurance plan. The latter is treated as a provincial specific purpose transfer and expenditure of these hospitals is recorded under hospital care. Due to improved analysis, revenue received by recreation commissions for services provided is also recorded under "sales and services - other".

In Quebec, sales and services for water, formerly included in special assessments are now included in sales and services "water", again as a result of improved information. A break in the series occurs in 1972 and 1973 based on a tentative decision that social welfare services in Montreal were administered by the city of Montreal and assisted by a 100% grant from the province. This does not constitute a change in policy but a change in statistical presentation.

1973 and 1974 - In prior years difficulties were encountered in attempting to produce metropolitan area statistics because the metropolitan areas defined by the census field frequently conflicted with the administrative boundaries of local government structures. This was encountered more and more with the introduction of regional municipalities. None of the Census Metropolitan Areas nor the census agglomerations were exactly co-terminous with the new regions. For these reasons it was decided to define a grouping of local governments within a Census Metropolitan Area as an "Urban Region". Such an urban region consists of a regional government, plus any or all other local governments which do not form part of the regional government, but are wholly or mainly within its territory. If more than one regional government exists within a metropolitan area, each such government is classified as a separate urban region.

Where no regional government exists, the urban region is classified as the local government comprising the complete Census Metropolitan Area; except that if the municipalities lying within the Census Metropolitan Area, include significant rural areas, then the urban region shall be the local governments in the urbanized census sub-division within the Census Metropolitan Area, or where such sub-division extends beyond the Census Metropolitan Area, the urban region shall be the core city or cities of the CMA and the other local governments wholly or mainly within that core.

The tentative decision regarding social welfare services instituted in the 1972-1973 report was reversed in this publication. The 100% payment from the province is a reimbursement of expenditure to the city of Montreal for the administrative expenses of the social welfare program under the jurisdiction of the province, and the city only acts in an administrative capacity in making the payments to the welfare recipients.

The format for Table 4, analysis of debt charges on debentures issued by municipalities has changed slightly from previous publications but has been made comparable with the presentation in the publication Local Government Finance - Actual, Catalogue 68-204, Table 2.

1974 and 1975 - Revenue and expenditure of the Canadian National Exhibition and the Central Canada Exhibition in Ontario, the Calgary Exhibition and Stampede Limited, and the Edmonton Exhibition Association in Alberta, and the Pacific National Exhibition in British Columbia were introduced in this series for the first time. Revenue was recorded

1972 et 1973 - Un certain nombre de modifications ont été apportées à la présente édition. Les recettes et les dépenses courantes des hôpitaux municipaux étaient présentées pour la première fois. Les "ventes de services - autres" prennent en compte le revenu direct des malades, autre que celui versé par les régimes d'assurance provinciaux. Ces derniers sont traités comme des transferts provinciaux à usage précis et les dépenses de ces hôpitaux sont enregistrées sous la rubrique consacrée aux soins médicaux. Grâce à une analyse plus poussée, les recettes des commissions récréatives au titre des services fournis sont aussi regroupées sous la rubrique "ventes de services autres".

Au Québec, les ventes des services d'approvisionnement d'eau, qui figuraient auparavant sous une rubrique spéciale, sont maintenant pris en compte dans les ventes des services "Approvisionnement d'eau", grâce également à des renseignements de meilleure qualité. Il y a solution de continuité dans les séries en 1972 et en 1973 par suite d'une décision de caractère provisoire intéressant les services de bien-être social de la ville de Montréal que l'on juge administrés par la ville et subventionnés à 100 % par la province. Il ne s'agit pas là d'un changement de politique, mais d'une simple modification de la présentation statistique.

1973 et 1974 - Dans les années passées, il a été difficile de produire des statistiques sur les régions métropolitaines, car les régions métropolitaines définies au recensement ne s'identifiaient pas toujours aux frontières administratives des administrations locales. Le problème s'est accru avec l'introduction des municipalités régionales, puisque ni les régions métropolitaines de recensement ni les agglomérations urbaines ne coïncidaient exactement avec ces nouvelles régions. On a alors décidé de créer une nouvelle unité, l'agglomération urbaine, qui comprendrait un groupe d'administrations locales au sein d'une région métropolitaine de recensement. L'agglomération urbaine se compose d'une administration régionale et de toute autre administration locale non comprise dans cette dernière, mais qui se situe entièrement ou principalement à l'intérieur de son territoire. S'il y a plus d'une administration régionale dans une région métropolitaine, chacune constitue une agglomération urbaine distincte.

Lorsqu'il n'existe aucune administration régionale, on classe l'agglomération urbaine comme administration locale englobant toute la région métropolitaine de recensement; par contre, si les municipalités qui se trouvent à l'intérieur de la région métropolitaine de recensement comprennent des régions rurales importantes, l'agglomération urbaine est alors constituée des administrations locales situées dans la subdivision de recensement urbanisée, celle-ci étant à son tour comprise dans la région métropolitaine de recensement. Si cette subdivision dépasse les limites de la région métropolitaine de recensement, l'agglomération urbaine est la ou les villes principales de l'A.M.R., les autres administrations locales étant situées entièrement ou principalement à l'intérieur de ce noyau de villes.

La décision provisoire concernant les services de bien-être social introduits dans le bulletin pour 1972-1973 n'a pas été maintenue pour la présente publication. Le paiement intégral effectué par la province constitue un remboursement des frais administratifs engagés par la ville de Montréal dans le cadre de son programme de bien-être social qui est sous régie provinciale. La ville n'agit qu'à titre d'intermédiaire administratif en distribuant les prestations aux bénéficiaires.

Nous avons légèrement modifié la présentation du tableau 4, qui présente une analyse des frais de la dette au titre des obligations non garanties émises par les municipalités; nous l'avons rendue comparable à celle adoptée dans la publication n° 68-204 au catalogue intitulée Finances des administrations publiques locales - Chiffres réels, au tableau 2.

1974 et 1975 - On a pris en compte pour la première fois dans cette série, les recettes et les dépenses de la Canadian National Exhibition et de la Central Canada Exhibition en Ontario, de la Calgary Exhibition and Stampede Limited, et de la Edmonton Exhibition Association en Alberta, ainsi que de la Pacific National Exhibition en Colombie-Britannique. Les recettes ont été comptées avec les "ventes et services - autres".

under "sales of service - other", while expenditure was included under "recreational and cultural service".

In accordance with the Municipalities Aid Act in British Columbia, grants under the act formerly classified as specific purpose transfers were classified as general purpose transfers.

The classification systems incorporated in A Financial Information System for Municipalities show many differences from those in the earlier manual and the reader is advised to consult the new publication to become fully aware of the nature and extent of these changes since it is impractical to describe them in detail here.

It is recognized that the discontinuities mentioned above preclude the use of data in this publication or its "Actual" companion, for the construction and analysis of time series of local government data. There are indications that the period of rapid change and development is passing and the Public Finance Division is planning to revise financial statistics for all levels of government for the past decade to conform with current concepts, classifications and coverage. However, the revision process itself is likely to be a lengthy exercise; several years are likely to pass, therefore, before revised data can be made available.

Statistics Canada assigns local government entities to three principal categories: municipalities, special purpose boards and local school boards. Municipalities, whether regional or unitary may delegate authority to provide certain services to semi-autonomous boards or commissions which Statistics Canada classifies as enterprise, institutional or other. Frequently such boards will be the joint creations of a number of municipalities. Quasi-municipalities, administered by provincially-appointed boards or commissions, are regarded as municipalities because they provide limited municipal services to areas that would otherwise be considered unorganized territory. Special purpose boards are also created by provincial governments to provide services of a local nature to areas which usually embrace more than one municipality; examples are regional library boards, conservation authorities, etc. School boards are closely allied to municipalities in that, in many instances, a large part of the financing is provided through the municipality and in some cases, the school board is formed from a committee of council. Although the quality and quantity of service provided by school boards is controlled by the provincial government, there is a strong local element of administration; Statistics Canada therefore considers school boards as a major component of local government.

The financial statistics presented herein are for municipalities (including waterworks), school boards and joint boards in their entirety; the remaining municipal boards, and special purpose boards are included to the extent to which they are financed by municipalities. Also to maintain uniformity, as near as possible, between provinces and to adhere to the concept of "gross revenue" and "gross expenditure (cost of services provided)", capital expenditures and relative provincial grants are included for municipalities, school boards and for special purpose boards that could be identified and for all conservation authorities in Ontario.

In the main the data in this report refers to the calendar year, but in a few cases it has been necessary to use the financial period nearest to December 31.

#### Estimating Procedures

The estimates presented as "Preliminary" for 1974 and "Estimated" for 1975 in this publication were obtained by projection of 1972 information as published

tandis que les dépenses figurent avec les "services récréatifs et culturels".

En Colombie-Britannique, les subventions qui étaient classées auparavant comme transferts à usage précis, en vertu des Municipalities Aid Act sont maintenant classées comme transferts de nature générale.

Les systèmes de classification publiés dans la série de publications intitulée Système d'information financière à l'usage des corporations municipales diffèrent sensiblement de ceux de l'ancien manuel, et l'on conseille au lecteur de consulter les nouvelles publications pour prendre pleinement connaissance de la nature et de l'étendu de ces variations puisqu'il serait peu pratique de les décrire ici en détail.

Il est évident que les solutions de continuité mentionnées ci-dessus empêchent l'usage de données dans cette publication, ou dans la publication complémentaire "chiffres réels", en ce qui concerne la construction et l'analyse des séries chronologiques de données sur les administrations locales. La période de changement et de modification rapides semble diminuer et la Division des finances publiques envisage la révision de toute la statistique financière pour tous les échelons de l'administration publique depuis dix ans conformément à la base, aux concepts et aux classifications courants. Toutefois, le processus de révision lui-même sera probablement très long; par conséquent, plusieurs années peuvent s'écouler avant que les données ne soient accessibles.

Statistique Canada classe les administrations locales en trois grandes catégories: les municipalités, les commissions spécialisées et les conseils scolaires. Les municipalités, qu'il s'agisse de communautés urbaines ou de municipalités proprement dites, peuvent déléguer leurs pouvoirs pour fournir certains services, à des commissions ou des conseils semi-autonomes que Statistique Canada considère comme entreprises de divers ordres. Souvent ces conseils sont des créations mixtes d'un groupe de municipalités. Les quasi-municipalités administrées par des conseils ou des commissions nommées par la province sont considérées comme municipalités parce qu'elles assument des fonctions de compétence municipale dans les régions qui autrement seraient considérées comme territoires non municipalisés. Les administrations provinciales mettent aussi sur pied des commissions spécialisées dans le but d'assurer un service particulier dans une région qui englobe plus d'une municipalité (commission régionales de bibliothèques, organismes de conservation, etc.). La relation entre les conseils scolaires et les municipalités est très étroite du fait que dans nombre de cas, le financement des premiers est largement assuré par les seconds, et que dans certains cas, le conseil scolaire procède d'un comité du conseil municipal. Bien que la province ait un droit de regard sur la qualité et la quantité des services assurés par un conseil scolaire, la part d'administration locale est considérable. Par conséquent, Statistique Canada considère les conseils scolaires comme un élément important de l'administration locale.

La statistique financière présentée ici est donc celle des municipalités (y compris les services des eaux), des conseils scolaires et des comités mixtes dans leur totalité; les autres commissions municipales et commissions spécialisées ne sont comprises que dans la mesure où elles sont financées par une municipalité. Afin de respecter, autant que possible, l'uniformité d'une province à l'autre et d'adhérer à la notion de "recettes brutes" et de "dépenses brutes (coût des services fournis)", les dépenses d'investissement et les subventions provinciales correspondantes ont été prises en compte pour toutes les municipalités, tous les conseils scolaires et toutes les commissions spécialisées qu'il a été possible d'identifier, ainsi que pour toutes les autorités dirigées de conservation en Ontario.

En général, les données présentées ici se rapportent à l'année civile, mais dans quelques cas, il a été nécessaire d'utiliser la période financière qui se terminait le plus près du 31 décembre.

#### Méthodes d'estimation

Les estimations présentées ici comme "chiffres préliminaires" pour 1974 et "estimations" pour 1975 sont tirées de la projection des chiffres de 1972 qui figurent dans Finances des

in Local Government Finance - Actual, Catalogue 68-204 on the trends established by survey. The data was collected and assembled, however, within the framework of the new manual (as described above).

Municipalities included in the survey were selected on the basis of two criteria.

- (1) Municipalities considered unique and therefore not representative were selected to be surveyed on a full coverage basis. This group included all municipalities in urban regions most remaining cities, and other municipalities which constituted extremes during the process of forming homogeneous groups prior to sample selection.
- (2) The remaining municipalities were grouped essentially by type of corporation (cities, towns, villages, etc.) within each province with some groups sub-divided into size strata where required. From these homogeneous groups sample municipalities were selected on a random basis with representation weighted by the proportion of the group to the respective provincial aggregate of total expenditures.

Basically, the method of projection was to apply the percentage change in sample data to current year, to the total data for the base year. This link or index of change was computed and applied for each item of revenue, expenditure, etc., within each sample group.

The estimates derived from data provided by those selected as sample municipalities were added to the estimates provided by the self-representing municipalities to arrive at projected revenue and expenditure comparable in scope to the Department of Municipal Affairs base data. These estimates on a provincial aggregate basis were then adjusted to compensate for portions of local government not represented by the survey and also to make the estimates comparable in scope with the "actual" series as published for 1972.

Capital expenditures were derived from the same survey, but a different estimating technique was employed. Although the same sample composition was observed, the estimates derived from sample municipalities were tempered by supporting information respecting capital expenditure programmes and works contract data.

#### Limitations

Although the specific items of revenue and expenditure are common to nearly all municipalities, their relative significance within the financial structure of each municipality differs to varying degrees. As an example towns of a comparable size in a given area might all have "real property tax" and "licences and permits" revenue. The proportion of these items of revenue to their respective total revenue could vary from one town to another within the group - indeed, it might be expected that the proportion of "licences and permits" would vary significantly. Therefore, the sample representation varies between items of revenue and expenditure and the quality of the estimates varies accordingly. Items which form a stable proportion of revenue or expenditure for a sample group of municipalities have a higher degree of accuracy or reliability than others. This inadequacy of the sample to be totally representative was recognized and special attention was given during the compilation to minimize errors resulting from under-representation of this nature. Such errors of sampling vary from item to item; however, the sample element forms only a part of the provincial total and hence the error in the provincial total of a particular item is relatively insignificant.

administrations publiques locales - Chiffres réels, n° 68-204 au catalogue conformément aux tendances observées à l'enquête que Statistique Canada a menée. Toutefois les données ont été recueillies et assemblées dans le cadre du manuel, comme il a été dit ci-dessus.

Lors du choix des municipalités on s'est servi de deux critères.

- (1) Dans le cas des municipalités considérées comme uniques, donc en constituant pas des exemples typiques, on a procédé à une enquête exhaustive, faisant partie de cette catégorie: toutes les municipalités dans des régions urbaines, la plupart des villes restantes, et les autres municipalités constituant des cas extrêmes au moment de la formation de groupes homogènes qui a précédé le tirage de l'échantillon.
- (2) Les autres municipalités ont été groupées essentiellement par type (villes, villages, etc.) dans chaque province et, au besoin, certains groupes ont été subdivisés en strates (selon la taille). De ces groupes homogènes, on a tiré au hasard des municipalités-échantillons qui sont elles-mêmes pondérées en fonction de la part du groupe dans l'agrégat provincial des dépenses totales.

La méthode fondamentale de projection consistait à appliquer aux données totales de l'année de base le taux de variation calculé pour l'échantillon entre l'année de base et l'année observée. Ce rapport, ou indice de variation, a été calculé et appliqué à chaque poste des recettes, des dépenses, etc., pour chaque groupe de l'échantillon.

Les estimations établies à partir des données fournies par les municipalités échantillonnées ont été ajoutées à celles des municipalités autoreprésentatives afin d'en arriver à des projections des recettes et des dépenses qui aient une portée comparable à celle des données de base du ministère des Affaires municipales. Ces estimations fondées sur les agrégats provinciaux ont alors été ajustées de manière à tenir compte des éléments de l'administration locale exclus de l'enquête et de façon à aligner ces estimations dans les limites utilisées dans la série des "chiffres réels" publié pour 1972.

Les dépenses d'investissement ont été tirées de la même enquête, mais par une méthode d'estimation différente. Bien que la composition de l'échantillon ait été la même, on a pondéré les estimations établies pour les municipalités échantillonnées en s'appuyant sur des chiffres tirés des programmes d'investissement et des marchés de travaux.

#### Limites

Bien que pour la très grande majorité des municipalités les postes des recettes et des dépenses soient identiques, leur importance relative au sein de la structure financière de chaque municipalité varie largement. Ainsi, dans une région donnée, les villes de taille comparable pourront avoir des recettes provenant des "impôts fonciers" et des "licences et permis", mais la proportion de ces postes par rapport à l'ensemble des recettes peut très bien varier d'une ville à l'autre; de fait, il est vraisemblable que la proportion respective des "licences et permis" varie considérablement. La représentativité des postes de recettes et de dépenses de l'échantillon est donc sujette à varier et la qualité des estimations s'en trouve touchée d'autant. Les postes qui constituent une part constante des recettes ou des dépenses pour un certain échantillon de municipalités comportent un degré plus élevé d'exactitude ou de fiabilité que les autres. Comme on savait que l'échantillon ne pouvait être totalement représentatif, on s'est efforcé, au moment d'exploiter les données, de réduire le plus possible l'effet des erreurs dues à ce manque de représentativité. Les erreurs d'échantillonnage de ce genre varient d'un poste à l'autre toutefois, comme les données provenant de l'échantillon ne constituent qu'une partie du total provincial, l'erreur pour un poste donné est donc relativement négligeable au niveau de l'ensemble de la province.

## General Revenue and Expenditure

General revenue and expenditure infers the "gross" concept which is used in this publication to conform with the publications for the other levels of government. General revenue includes all revenue regardless of source; general expenditure includes all current and capital expenditures without duplication. To avoid duplication, outlays for the acquisition of fixed assets are reflected at the point in time at which the fixed asset is acquired rather than when any loan in this respect is repaid (municipal accounting conventions treat the repayment of long-term loans as an expenditure in the year in which the revenue is provided for this purpose). Also as the "general" presentation constitutes a consolidation of the "current" and "capital" funds, the current expenditure item "contributions to the capital and loan fund" is eliminated as an inter-fund transfer.

General revenue in this publication includes all current revenue of all municipalities (including water-works) school boards and the net contributions from municipal boards, together with capital grants from other levels of government respecting all capital expenditures of municipalities and their boards (except enterprises), special purpose boards and school boards. General expenditure comprises current and capital expenditures without duplication including the same coverage of the local government universe as the revenue. Because municipal boards are included only to the extent of their financing by municipalities, the revenues are understated by the amount of direct transfers to these entities from other levels of government and to a lesser extent by other incidental forms of revenue.

## Debenture Debt Charges

The analysis of debenture debt charges shown in Table 4 is a presentation of the charges relative to the gross debenture debt of local government. Due to the fact that the responsibility for education rests with the provincial government in New Brunswick there are no debenture debt charges for schools in this province. Likewise in Newfoundland as the schools are primarily denominational and largely financed by the province, no debenture debt charges are recorded at the local level.

## Specific Purpose Transfers from Federal and Provincial Governments

Specific Purpose transfers from other levels of government, comprising grants-in-aid and shared-cost contributions of both a current and capital nature, are presented in provincial aggregate form by function. The presentation conforms both in scope and detail with that shown for prior years in the publication Local Government Finance - Actual, Catalogue 68-204. In a few cases grants are identifiable by programme rather than by function. Grants under the Local Initiatives Programme were apportioned between recreational and cultural services, and environmental development services.

## Urban Regions

In presenting the information on urban regions, the entire municipality was included in this presentation. This is especially meaningful in the case of regional municipalities where all local entities within the regional boundaries are included in this presentation.

The decision respecting the inclusion of school boards in the major urban region compilations where boundaries were not coterminous with the areas was based

## Recettes et dépenses générales

Les recettes et les dépenses générales impliquent le concept de recettes et de dépenses "brutes" utilisé dans cette publication de manière à aligner les chiffres présentés ici sur les données figurant dans les publications consacrées aux autres échelons de l'administration publique. Les recettes générales comprennent toutes les dépenses courantes et toutes les dépenses d'investissement, chaque dépense n'étant prise en compte qu'une seule fois. Pour éviter qu'une même somme soit prise en compte deux fois dans le calcul des dépenses générales, le coût d'acquisition des immobilisations est pris en compte au moment de l'acquisition et non pas lors du remboursement d'un emprunt contracté à cette fin. (Par convention, la comptabilité municipale impute le remboursement d'une dette à long terme aux dépenses de l'année même pour laquelle les recettes correspondantes sont affectées). De même, comme les dépenses "générales" constituent une consolidation des dépenses "courantes" et des dépenses de "capital", le poste des dépenses courantes relatif aux contributions au fonds de capital et d'emprunt se trouve éliminé comme étant un transfert entre fonds.

Les recettes générales comprennent ici les recettes courantes de toutes les municipalités (y compris le service des eaux) et des conseils scolaires, la contribution nette des comités municipaux et les subventions en capital des autres échelons de l'administration publique relatives aux dépenses d'investissement des municipalités et des commissions (entreprises exceptées), les commissions spécialisées et les conseils scolaires. Les dépenses générales comprennent les dépenses courantes et les dépenses de capital sans double compte en se basant sur le même univers que celui des recettes. Étant donné que les comités municipaux sont uniquement pris en compte dans la mesure où ils sont financés par les municipalités, on déduit des recettes les transferts directs à ces organismes faits par d'autres échelons de l'administration publique, et, à un degré moindre, les autres formes de recettes accessoires.

## Frais du service de la dette obligataire non garantie

L'analyse du service de la dette obligataire non garantie, au tableau 4, présente les frais ayant trait à la dette obligataire non garantie des administrations locales. Étant donné que l'éducation au Nouveau-Brunswick relève du gouvernement provincial, il n'y a pas de frais du service de la dette obligataire non garantie pour les écoles de cette province. De même à Terre-Neuve, parce que les écoles sont d'abord confessionnelles et largement financées par la province, on n'enregistre aucun frais du service de dette obligataire non garantie au niveau local.

## Transferts à usage précis provenant des administrations fédérales et provinciales

Les transferts à usage précis par les autres échelons de l'administration publique au titre des dépenses courantes et d'investissement (y compris les subventions et les contributions aux programmes conjoints) sont présentés par fonction au niveau des agrégats provinciaux. La présentation est conforme en étendue et en détail à celle des années antérieures qui figure dans la publication n° 68-204 au catalogue Finances des administrations publiques locales - Chiffres réels. Quelques subventions relèvent d'un programme et non pas d'une fonction. Les subventions au titre des "Programmes d'initiatives locales" sont réparties entre les services culturels et des loisirs et les services d'urbanisme, d'aménagement et de mise en valeur de territoire.

## Régions urbaines

En présentant les renseignements sur les régions urbaines, la municipalité au complet a été prise en compte dans cette publication. Ce fait est particulièrement significatif dans le cas des municipalités régionales où toutes les agglomérations comprises dans les limites régionales sont prises en compte.

On a décidé d'inclure les conseils scolaires dans les calculs des grandes régions urbaines, dont les limites n'étaient pas communes à celles des régions, parce que les régions de ces

on those boards, the areas of which most closely conformed to the selected urban regions. Provincial grants to these school boards and their current expenditure were allocated provincially on a per capita basis. Similar treatment was accorded the estimated, capital expenditure in Quebec, Ontario and British Columbia.

So far as possible gross revenue and expenditure of urban regions is presented on a basis consistent with the provincial aggregates. Exceptions to this consistency occur where inter-municipal transfers can be almost entirely eliminated on consolidation for the provincial aggregate, but only partially eliminated in the aggregate for the selected urban regions.

Where adjustments were required to provincial aggregate data, to offset known bias in the estimates, a comparable adjustment was made to the selected urban regions on a judgement basis.

The urban regions and their constituent municipalities are shown in the following list. Where available the 1971 census population figures for each, and the proportions to their respective provincial totals follow. In the case of those regional governments formed in Ontario in 1974, where the 1971 Census figures did not apply, the population figures as published in the 1974 Municipal Directory of the Ministry of Treasury, Economics and Intergovernmental Affairs were used.

conseils se rapprochaient le plus de ces régions urbaines. Les subventions provinciales accordées à ces conseils scolaires et leurs dépenses courantes ont été ventilées par province proportionnellement à la population. Les estimations des dépenses d'investissement au Québec, en Ontario et en Colombie-Britannique ont été traitées de la même façon.

Dans la mesure du possible les recettes et les dépenses brutes des régions urbaines sont présentées sur une base conforme aux agrégats provinciaux. Il y a des exceptions lorsque les transferts intermunicipaux peuvent être presque entièrement éliminés lors de la consolidation des agrégats provinciaux, mais seulement en partie pour l'agrégat relatif à certaines régions urbaines.

Lorsqu'il devenait nécessaire de rajuster les données de l'agrégat provincial, pour contrebalancer une inexactitude connue dans les estimations, on a procédé à un rajustement comparable de certaines régions urbaines à partir d'une estimation.

Les régions urbaines et leurs municipalités constituantes figurent dans la liste qui suit. Lorsque les données étaient disponibles, on a indiqué les chiffres de population du recensement de 1971 pour chacune et le pourcentage qu'elles représentaient, par rapport à la population totale de leur province respective. Dans le cas des administrations régionales de l'Ontario créées en 1974, on s'est servi à défaut des chiffres du recensement, des renseignements contenus dans l'Annuaire municipal de 1974 du ministère du Trésor, de l'Economie et des Affaires intergouvernementales.

## INTRODUCTION

This report is the twentieth in an annual series presenting estimated revenue and expenditure of local governments. For a variety of reasons actual data on local government financial transactions cannot be produced until some considerable time after the year to which they apply. This interim report, therefore, presents more up to date information than is available in the companion publication Local Government Finance - Actual, Catalogue 68-204.

The 20 years during which these reports have been issued have witnessed a multitude of changes in the roles assigned to local governments, in their structures and methods of operation, in the concepts and classifications governing their financial reporting and in their ability to report on their financial transactions. These developments have been reflected in this series of publications generally as they occurred since there was no point in time when all these major factors seemed likely to stabilize. The result is that there are many discontinuities within the series; some of the more important in recent years were described in the 1974-1975 publication.

Statistics Canada assigns local government entities to three principal categories: municipalities, special purpose boards and local school boards. Municipalities, whether regional or unitary may delegate authority to provide certain services to semi-autonomous boards or commissions which Statistics Canada classifies as enterprise, institutional or other. Frequently such boards will be the joint creations of a number of municipalities. Quasi-municipalities, administered by provincially-appointed boards or commissions, are regarded as municipalities because they provide limited municipal services to areas that would otherwise be considered unorganized territory. Special purpose boards are also created by provincial governments to provide services of a local nature to areas which usually embrace more than one municipality; examples are regional library boards, conservation authorities, etc. School boards are closely allied to municipalities in that, in many instances, a large part of the financing is provided through the municipality and in some cases, the school board is formed from a committee of council. Although the quality and quantity of service provided by school boards is controlled by the provincial government, there is a strong local element of administration; Statistics Canada therefore considers school boards as a major component of local government.

Cette publication est le vingtième d'une série annuelle sur les recettes et les dépenses estimatives des administrations locales. Pour diverses raisons, les données actuelles sur les transactions financières des administrations locales ne peuvent être présentées que longtemps après l'année qu'elles visent. Par conséquent, cette publication provisoire présente davantage de renseignements à jour que ne le fait la publication complémentaire n° 68-204 au catalogue Finances des administrations publiques locales - Chiffres réels.

Au cours des 20 années de parution de ces publications, on a constaté de nombreux changements du rôle attribué aux administrations locales, de leurs méthodes d'administration, des concepts et des classifications applicables à leurs rapports financiers, en même temps qu'évoluaient leur capacité à présenter leurs opérations financières. En général, ces changements ont été pris en compte dans la présente série à mesure qu'ils se produisaient puisqu'il semblait peu probable que ces facteurs importants se stabilisent à un moment donné. Il y a donc de nombreuses solutions de continuité dans la série; quelques-unes parmi les plus importantes ont été décrites dans la publication de 1974-1975.

Statistique Canada classe les administrations locales en trois grandes catégories: les municipalités, les commissions spécialisées et les conseils scolaires. Les municipalités, qu'il s'agisse de communautés urbaines ou de municipalités proprement dites, peuvent déléguer leurs pouvoirs pour fournir certains services, à des commissions ou des conseils semi-autonomes que Statistique Canada considère comme entreprises de divers ordres. Souvent ces conseils sont des créations mixtes d'un groupe de municipalités. Les quasi-municipalités administrées par des conseils ou des commissions nommées par la province sont considérées comme municipalités parce qu'elles assument des fonctions de compétence municipale dans les régions qui autrement seraient considérées comme territoires non municipalisés. Les administrations provinciales mettent aussi sur pied des commissions spécialisées dans le but d'assurer un service particulier dans une région qui englobe plus d'une municipalité (commission régionales de bibliothèques, organismes de conservation, etc.). La relation entre les conseils scolaires et les municipalités est très étroite du fait que dans nombre de cas, le financement des premiers est largement assuré par les seconds, et que dans certains cas, le conseil scolaire procède d'un comité du conseil municipal. Bien que la province ait un droit de regard sur la qualité et la quantité des services assurés par un conseil scolaire, la part d'administration locale est considérable. Par conséquent, Statistique Canada considère les conseils scolaires comme un élément important de l'administration locale.

The financial statistics presented herein are for municipalities (including waterworks), school boards and joint boards in their entirety; the remaining municipal boards, and special purpose boards are included to the extent to which they are financed by municipalities. Also to maintain uniformity, as near as possible, between provinces and to adhere to the concept of "gross revenue" and "gross expenditure". Capital expenditures and relative provincial grants are included for municipalities, school boards, for special purpose boards that could be identified and for all conservation authorities in Ontario.

In the main, the data in this report refers to the calendar year, but in a few cases it has been necessary to use the financial period nearest to December 31.

#### Estimating Procedures

The data presented as "Preliminary" for 1975 and "Estimated" for 1976 in this publication were obtained by survey. The data was collected and assembled, within the framework of A Financial Information System for Municipalities, Catalogue 12-532, 12-533, and 12-534. These volumes, which resulted from the work of the eighth Federal-Provincial Conference on Municipal Financial Statistics, were issued by Statistics Canada late in 1970 and replaced the Municipal Finance Reporting Manual, which formed the basis for editions of this publication prior to 1971-1972.

Municipalities included in the survey were selected on the basis of two criteria.

- (1) Municipalities considered unique and therefore not representative were selected to be surveyed on a full coverage basis. This group included all municipalities in urban regions, most remaining cities, and other municipalities which constituted extremes during the process of forming homogeneous groups prior to sample selection.
- (2) The remaining municipalities were grouped essentially by type of corporation (cities, towns, villages, etc.) within each province with some groups subdivided into size strata where required. From these homogeneous groups sample municipalities were selected on a random basis with representation weighted by the proportion of the group to the respective provincial aggregate of total expenditures.

La statistique financière présentée ici est donc celle des municipalités (y compris les services des eaux), des conseils scolaires et des comités mixtes dans leur totalité; les autres commissions municipales et commissions spécialisées ne sont comprises que dans la mesure où elles sont financées par une municipalité. Afin de respecter, autant que possible, l'uniformité d'une province à l'autre et d'adhérer à la notion de "recettes brutes" et de "dépenses brutes", les dépenses d'investissement et les subventions provinciales correspondantes ont été prises en compte pour toutes les municipalités, tous les conseils scolaires, toutes les commissions spécialisées qu'il a été possible d'identifier, ainsi que pour toutes les autorités dirigées de conservation en Ontario.

En général, les données présentées ici se rapportent à l'année civile, mais dans quelques cas, il a été nécessaire d'utiliser la période financière qui se terminait le plus près du 31 décembre.

#### Méthodes d'estimation

Les données présentées ici comme "chiffres préliminaires" pour 1975 et "estimations" pour 1976 sont tirées de l'enquête que Statistique Canada a menée. Les données ont été recueillies et assemblées dans le cadre du manuel. Système d'information financière à l'usage des corporations municipales, (nos 12-532F, 12-533F et 12-534F au catalogue). Ces ouvrages de Statistique Canada, fruit de la huitième Conférence fédérale-provinciale sur les statistiques financières des municipalités, sont sortis à la fin de 1970 et remplacent le Manuel de déclaration des finances municipales, qui a servi de base aux éditions de la présente publication avant 1971-1972.

Lors du choix des municipalités on s'est servi de deux critères.

- (1) Dans le cas des municipalités considérées comme uniques, donc en constituant pas des exemples typiques, on a procédé à une enquête exhaustive, faisant partie de cette catégorie: toutes les municipalités dans des régions urbaines, la plupart des villes restantes, et les autres municipalités constituant des cas extrêmes au moment de la formation de groupes homogènes qui a précédé le tirage de l'échantillon.
- (2) Les autres municipalités ont été groupées essentiellement par type (villes, villages, etc.) dans chaque province et, au besoin, certains groupes ont été subdivisés en strates (selon la taille). De ces groupes homogènes, on a tiré au hasard des municipalités-échantillons qui sont elles-mêmes pondérées en fonction de la part du groupe dans l'agrégat provincial des dépenses totales.

Basically, the method of sample inflation used was to apply to the sample data a factor derived from base data contained in Department of Municipal Affairs Reports. The contribution to sample group aggregates made by the sampled municipalities was established and applied to the data supplied by municipalities in each sample group.

The estimates derived from data provided by those selected as sample municipalities were added to the estimates provided by the self-representing municipalities to arrive at projected revenue and expenditure comparable in scope to the Department of Municipal Affairs base data. These estimates on a provincial aggregate basis were then adjusted to compensate for portions of local government not represented by the survey and also to make the estimates comparable in scope with the "actual" series as published for 1974.

Capital expenditure data were derived from a survey as well, but a different estimating technique was employed. Although the same sample composition was observed, the estimates derived from sample municipalities were tempered by supporting information respecting capital expenditure programmes and works contract data.

#### Limitations

Although the specific items of revenue and expenditure are common to nearly all municipalities, their relative significance within the financial structure of each municipality differs to varying degrees. As an example towns of a comparable size in a given area might all have "real property tax" and "licences and permits" revenue. The proportion of these items of revenue to their respective total revenue could vary from one town to another within the group - indeed, it might be expected that the proportion of "licences and permits" would vary significantly. Therefore, the sample representation varies between items of revenue and expenditure and the quality of the estimates varies accordingly. Items which form a stable proportion of revenue or expenditure for a sample group of municipalities have a higher degree of accuracy or reliability than others. This inadequacy of the sample to be totally representative has been recognized and special attention was given during the compilation to minimize errors resulting from under-representation of this nature. Such errors of sampling vary from item to item; however, the sample element forms only a part of the provincial total and hence the error in the provincial total for a particular item is relatively insignificant.

Fondamentalement, la méthode utilisée pour gonfler l'échantillon consistait à multiplier les données de cet échantillon par un facteur tiré des données de base contenues dans les rapports des ministères des Affaires municipales. Nous avons déterminé l'apport des municipalités choisies aux sommes des groupes de l'échantillon et nous l'avons appliqué aux données fournies par les municipalités pour chaque groupe de l'échantillon.

Les estimations établies à partir des données fournies par les municipalités échantillonnées ont été ajoutées à celles des municipalités autoreprésentatives afin d'en arriver à des projections des recettes et des dépenses qui aient une portée comparable à celle des données de base du ministère des Affaires municipales. Ces estimations fondées sur les agrégats provinciaux ont alors été ajustées de manière à tenir compte des éléments de l'administration locale exclus de l'enquête et de façon à aligner ces estimations dans les limites utilisées dans la série des "chiffres réels" publié pour 1974.

Les données des dépenses d'investissement ont été tirées aussi d'une enquête, mais par une méthode d'estimation différente. Bien que la composition de l'échantillon ait été la même, on a pondéré les estimations établies pour les municipalités échantillonnées en s'appuyant sur des chiffres tirés des programmes d'investissement et des marchés de travaux.

#### Limites

Bien que pour la très grande majorité des municipalités les postes des recettes et des dépenses soient identiques, leur importance relative au sein de la structure financière de chaque municipalité varie largement. Ainsi, dans une région donnée, les villes de taille comparable pourront avoir des recettes provenant des "impôts fonciers" et des "licences et permis", mais la proportion de ces postes par rapport à l'ensemble des recettes peut très bien varier d'une ville à l'autre; de fait, il est vraisemblable que la proportion respective des "licences et permis" varie considérablement. La représentativité des postes de recettes et de dépenses de l'échantillon est donc sujette à varier et la qualité des estimations s'en trouve touchée d'autant. Les postes qui constituent une part constante des recettes ou des dépenses pour un certain échantillon de municipalités comportent un degré plus élevé d'exactitude ou de fiabilité que les autres. Comme on savait que l'échantillon ne pouvait être totalement représentatif, on s'est efforcé, au moment d'exploiter les données, de réduire le plus possible l'effet des erreurs dues à ce manque de représentativité. Les erreurs d'échantillonnage de ce genre varient d'un poste à l'autre; toutefois, comme les données provenant de l'échantillon ne constituent qu'une partie du total provincial, l'erreur pour un poste donné est donc relativement négligeable au niveau de l'ensemble de la province.

## General Revenue and Expenditure

General revenue and expenditure infers the "gross" concept which is used in this publication to conform with the publications for the other levels of government. General revenue includes all revenue regardless of source; general expenditure includes all current and capital expenditures without duplication. To avoid duplication, outlays for the acquisition of fixed assets are reflected at the point in time at which the fixed asset is acquired rather than when any loan in this respect is repaid (municipal accounting conventions treat the repayment of long-term loans as an expenditure in the year in which the revenue is provided for this purpose). Also as the "general" presentation constitutes a consolidation of the "current" and "capital" funds, the current expenditure item "contributions to the capital and loan fund" is eliminated as an inter-fund transfer.

General revenue in this publication includes all current revenue of all municipalities (including waterworks) school boards and the net contributions from municipal boards, together with capital grants from other levels of government respecting all capital expenditures of municipalities and their boards (except enterprises), special purpose boards and school boards. General expenditure comprises current and capital expenditures without duplication including the same coverage of the local government universe as the revenue. Because municipal boards are included only to the extent of their financing by municipalities, the revenues are understated by the amount of direct transfers to these entities from other levels of government and to a lesser extent by other incidental forms of revenue.

## Debenture Debt Charges

The analysis of debenture debt charges shown in Table 4 is a presentation of the charges relative to the gross debenture debt of local government. Since the responsibility for education rests with the provincial government in New Brunswick there are no debenture debt charges for schools in this province.

## Specific Purpose Transfers from Federal and Provincial Governments

Specific purpose transfers from other levels of government, comprising grants-in-aid and shared-cost contributions of both a current and capital nature, are presented in provincial aggregate form by function.

## Recettes et dépenses générales

Les recettes et les dépenses générales impliquent le concept de recettes et de dépenses "brutes" utilisé dans cette publication de manière à aligner les chiffres présentés ici sur les données figurant dans les publications consacrées aux autres échelons de l'administration publique. Les recettes générales comprennent toutes les dépenses courantes et toutes les dépenses d'investissement, chaque dépense n'étant prise en compte qu'une seule fois. Pour éviter qu'une même somme soit prise en compte deux fois dans le calcul des dépenses générales, le coût d'acquisition des immobilisations est pris en compte au moment de l'acquisition et non pas lors du remboursement d'un emprunt contracté à cette fin. (Par convention, la comptabilité municipale impute le remboursement d'une dette à long terme aux dépenses de l'année même pour laquelle les recettes correspondantes sont affectées). De même, comme les dépenses "générales" constituent une consolidation des dépenses "courantes" et des dépenses de "capital", le poste des dépenses courantes relatif aux contributions au fonds de capital et d'emprunt se trouve éliminé comme étant un transfert entre fonds.

Les recettes générales comprennent ici les recettes courantes de toutes les municipalités (y compris le service des eaux) et des conseils scolaires, la contribution nette des comités municipaux et les subventions en capital des autres échelons de l'administration publique relative aux dépenses d'investissement des municipalités et des commissions (entreprises exceptées), les commissions spécialisées et les conseils scolaires. Les dépenses générales comprennent les dépenses courantes et les dépenses de capital sans double compte en se basant sur le même univers que celui des recettes. Étant donné que les comités municipaux sont uniquement pris en compte dans la mesure où ils sont financés par les municipalités, ont déduit des recettes les transferts directs à ces organismes faits par d'autres échelons de l'administration publique, et, à un degré moindre, les autres formes de recettes accessoires.

## Frais du service de la dette obligataire non garantie

L'analyse du service de la dette obligataire non garantie, au tableau 4, présente les frais ayant trait à la dette obligataire non garantie des administrations locales. Étant donné que l'éducation au Nouveau-Brunswick relève du gouvernement provincial, il n'y a pas de frais du service de la dette obligataire non garantie pour les écoles de cette province.

## Transferts à usage précis provenant des administrations fédérales et provinciales

Les transferts à usage précis par les autres échelons de l'administration publique au titre des dépenses courantes et d'investissement (y compris les subventions et les contributions aux programmes conjoints) sont présentés par fonction au niveau des

The presentation conforms both in scope and detail with that shown for prior years in the publication Local Government Finance - Actual, Catalogue 68-204. In a few cases grants are identifiable by programme rather than by function. Grants under the Local Initiatives Programme were apportioned between recreational and cultural services, and environmental development services.

### Urban Regions

The following table indicates those municipalities which form part of urban regions. The data presented for each of these regions consists of the transactions of those municipalities and of other boards and commissions whose services were provided within the region. School board revenues, excluding taxation and their expenditures were allocated to the regions on the basis of population in those areas where data on the estimated revenues and expenditures of individual boards within a region were not available. The same procedure was followed in allocating capital expenditures of school boards to urban regions.

So far as possible gross revenue and expenditure of urban regions is presented on a basis consistent with the provincial aggregates. Exceptions to this consistency occur where inter-municipal transfers can be almost entirely eliminated on consolidation for the provincial aggregate, but only partially eliminated in the aggregates for the selected urban regions.

Where adjustments were required to provincial aggregate data, to offset known bias in the estimates, a comparable adjustment was made to the selected urban regions on a judgment basis.

agrégats provinciaux. La présentation est conforme en étendue et en détail à celle des années antérieures qui figure dans la publication n° 68-204 au catalogue Finances des administrations publiques locales - Chiffres réels. Quelques subventions relèvent d'un programme et non pas d'une fonction. Les subventions au titre des "Programmes d'initiatives locales" sont réparties entre les services culturels et des loisirs et les services d'urbanisme, d'aménagement et de mise en valeur de territoire.

### Régions urbaines

Le tableau suivant énumère les municipalités qui font partie des régions urbaines. Les données fournies pour chacune de ces régions recouvrent les transactions de ces municipalités et des autres comités, commissions et conseils qui ont assuré des services dans cette région. Les recettes des commissions scolaires, à l'exclusion des taxes, et leurs dépenses ont été imputées aux régions proportionnellement à la population des secteurs pour lesquels nous ne possédions pas de données sur les recettes et les dépenses estimatives de chaque commission scolaire d'une région donnée. Les immobilisations des commissions scolaires ont été imparties de la même façon aux régions urbaines.

Dans la mesure du possible les recettes et les dépenses brutes des régions urbaines sont présentées sur une base conforme aux agrégats provinciaux. Il y a des exceptions lorsque les transferts inter-municipaux peuvent être presque entièrement éliminés lors de la consolidation des agrégats provinciaux, mais seulement en partie pour l'agrégat relatif à certaines régions urbaines.

Lorsqu'il devenait nécessaire de rajuster les données de l'agrégat provincial, pour contrebalancer une inexactitude connue dans les estimations, on a procédé à un rajustement comparable de certaines régions urbaines à partir d'une estimation.

## INTRODUCTION

This report is the twenty-first in an annual series presenting estimated revenue and expenditure of local governments. For a variety of reasons actual data on local government financial transactions cannot be produced until some considerable time after the year to which they apply. This interim report, therefore, presents more up to date information than is available in the companion publication Local Government Finance - Actual, Catalogue 68-204.

The 21 years during which these reports have been issued have witnessed a multitude of changes in the roles assigned to local governments, in their structures and methods of operation, in the concepts and classifications governing their financial reporting and in their ability to report on their financial transactions. These developments have been reflected in this series of publications generally as they occurred since there was no point in time when all these major factors seemed likely to stabilize. The result is that there are many discontinuities within the series; some of the more important in recent years were described in the 1974-1975 publication.

Statistics Canada assigns local government entities to three principal categories: municipalities, special purpose boards and local school boards. Municipalities, whether regional or unitary may delegate authority to provide certain services to semi-autonomous boards or commissions which Statistics Canada classifies as enterprise, institutional or other. Frequently such boards will be the joint creations of a number of municipalities. Quasi-municipalities, administered by provincially-appointed boards or commissions, are regarded as municipalities because they provide limited municipal services to areas that would otherwise be considered unorganized territories. Special purpose boards are also created by provincial governments to provide services of a local nature to areas which usually embrace more than one municipality; examples are regional library boards, conservation authorities, etc. School boards are closely allied to municipalities in that, in many instances, a large part of the financing is provided through the municipality and in some cases, the school board is formed from a committee of council. Although the quality and quantity of service provided by school boards is controlled by the provincial government, there is a strong local element of administration; Statistics Canada therefore considers school boards as a major component of local government.

Cette publication est la vingt et unième d'une série annuelle sur les revenus et les dépenses estimatifs des administrations locales. Pour diverses raisons, les données actuelles sur les transactions financières des administrations locales ne peuvent être présentées que longtemps après l'année qu'elles visent. Par conséquent, cette publication provisoire présente davantage de renseignements à jour que ne le fait la publication complémentaire n° 68-204 au catalogue, Les finances publiques locales - Chiffres réels.

Au cours des 21 années de parution de ces publications, on a constaté de nombreux changements du rôle attribué aux administrations locales, de leurs méthodes d'administration, des concepts et des classifications applicables à leurs rapports financiers, en même temps qu'évoluait leur capacité de présenter leurs opérations financières. En général, ces changements ont été pris en compte dans la présente série à mesure qu'ils se produisaient puisqu'il semblait peu probable que ces facteurs importants se stabilisent à un moment donné. Il y a donc de nombreuses solutions de continuité dans la série; quelques-unes parmi les plus importantes ont été décrites dans la publication de 1974-1975.

Statistique Canada classe les administrations locales en trois grandes catégories: les municipalités, les commissions spécialisées et les conseils scolaires. Les municipalités, qu'il s'agisse de communautés urbaines ou de municipalités proprement dites, peuvent déléguer leurs pouvoirs de fournir certains services à des commissions ou des conseils semi-autonomes que Statistique Canada considère comme entreprises de divers ordres. Souvent ces conseils sont des créations mixtes d'un groupe de municipalités. Les quasi-municipalités administrées par des conseils ou des commissions nommées par la province sont considérées comme municipalités parce qu'elles assument des fonctions de compétence municipale dans des régions qui autrement seraient considérées comme territoires non municipalisés. Les administrations provinciales mettent aussi sur pied des commissions spécialisées dans le but d'assurer un service particulier dans une région qui englobe plus d'une municipalité (commissions régionales de bibliothèque, organismes de conservation, etc.). La relation entre les conseils scolaires et les municipalités est très étroite du fait que, dans nombre de cas, le financement des premiers est largement assuré par les secondes et que, dans certains cas, le conseil scolaire procède d'un comité du conseil municipal. Bien que la province ait un droit de regard sur la qualité et la quantité des services assurés par un conseil scolaire, la part d'administration locale est considérable. Par conséquent, Statistique Canada considère les conseils scolaires comme un élément important de l'administration locale.

The financial statistics presented herein are for municipalities (including waterworks), school boards and joint boards in their entirety; the remaining municipal boards, and special purpose boards are included to the extent to which they are financed by municipalities. Also to maintain uniformity, as near as possible, between provinces and to adhere to the concept of "gross revenue" and "gross expenditure", capital expenditures and relative provincial grants are included for municipalities, school boards, special purpose boards that could be identified, and for all conservation authorities in Ontario.

This approach to the treatment of capital expenditure which reflects such outlays as expenditures in the financial period in which they are made in spite of the fact that they may be financed through the issuance of long term debt, differs from the approach generally used in the accounting methods of most municipalities.

In the main, the data in this report refers to the calendar year, but in a few cases it has been necessary to use the financial period nearest to December 31.

#### Estimating Procedures

The data presented as "Preliminary" for 1976 and "Estimated" for 1977 in this publication were obtained by survey. The data was collected and assembled, within the framework of A Financial Information System for Municipalities, Catalogues 12-532, 12-533 and 12-534. These volumes, which resulted from the work of the eighth Federal-Provincial Conference on Municipal Financial Statistics, were issued by Statistics Canada late in 1970 and replaced the Municipal Finance Reporting Manual, which formed the basis for editions of this publication prior to 1971-1972.

Municipalities included in the survey were selected on the basis of two criteria.

- (1) Municipalities considered unique and therefore not representative were selected to be surveyed on a full coverage basis. This group included all municipalities in urban regions, most remaining cities, and other municipalities which constituted extremes during the process of forming homogeneous groups prior to sample selection.
- (2) The remaining municipalities were grouped essentially by type of corporation (cities, towns, villages, etc.) within each province with some groups subdivided into size strata where required.

La statistique financière présentée ici est donc celle des municipalités (y compris des services des eaux), des conseils scolaires et des comités mixtes dans leur totalité; les autres commissions municipales et commissions spécialisées ne sont comprises que dans la mesure où elles sont financées par une municipalité. Afin de respecter, autant que possible, l'uniformité d'une province à l'autre et d'adhérer à la notion de "revenus bruts" et de "dépenses brutes", les dépenses d'investissement et les subventions provinciales correspondantes ont été prises en compte pour toutes les municipalités, tous les conseils scolaires, toutes les commissions spécialisées qu'il a été possible d'identifier et tous les organismes de conservation de l'Ontario.

Cette façon de traiter les dépenses d'investissement, qui prend en compte les dépenses réellement effectuées pendant un exercice financier, même si elles sont financées par l'émission d'obligations à long terme, diffère de l'approche comptable que les municipalités adoptent généralement.

En général, les données présentées ici se rapportent à l'année civile, mais dans quelques cas, il a été nécessaire d'utiliser la période financière qui se terminait le plus près du 31 décembre.

#### Méthodes d'estimation

Les données présentées ici comme "chiffres préliminaires" pour 1976 et "estimations" pour 1977 sont tirées de l'enquête que Statistique Canada a menée. Les données ont été recueillies et assemblées dans le cadre du manuel Système d'information financière à l'usage des corporations municipales, (nos 12-532F, 12-533F et 12-534F au catalogue). Ces ouvrages de Statistique Canada, fruit de la huitième Conférence fédérale-provinciale sur les statistiques financières des municipalités, sont sortis à la fin de 1970 et remplacent le Manuel de déclaration des finances municipales, qui a servi de base aux éditions de la présente publication avant 1971-1972.

Lors du choix des municipalités on s'est servi de deux critères.

- (1) Dans le cas des municipalités considérées comme uniques, donc ne constituant pas des exemples typiques, on a procédé à une enquête exhaustive. Faisaient partie de cette catégorie toutes les municipalités dans les régions urbaines, la plupart des villes détachées et les autres municipalités constituant des cas extrêmes au moment de la formation de groupes homogènes qui a précédé le tirage de l'échantillon.
- (2) Les autres municipalités ont été groupées essentiellement par type (villes, villages, etc.) dans chaque province et, au besoin, certains groupes ont été subdivisés en strates (selon

From these homogeneous groups sample municipalities were selected on a random basis with representation weighted by the proportion of the group to the respective provincial aggregate of total expenditures.

#### Coverage

Preliminary and estimate questionnaires were sent to those municipalities appearing in the survey frame. This survey frame covers all municipalities included in the urban communities in Quebec and in the regional municipalities in Ontario, together with the following:

**Cities:** All cities in all provinces and territories except four in Quebec and five in British Columbia.

**Towns:** All towns in Prince Edward Island, New Brunswick, Yukon and the Northwest Territories, along with a sample survey of 16 out of 115 towns in Newfoundland, 15 out of 38 in Nova Scotia, 77 out of 208 in Quebec, six out of 23 in Ontario with a population over 5,000, and ten out of 45 with a population under 5,000; in Manitoba seven out of 35, in Saskatchewan five out of 17 with a population over 2,000 and eight out of 30 with a population from 1,000 to 2,000, and in Alberta 15 out of 102 towns.

On the basis of the returns from this sample survey the respective inflationary factor was used in each province for the remaining 99 towns in Newfoundland, 23 in Nova Scotia, 17 in Ontario with a population over 5,000, and 35 with a population under 5,000, 28 in Manitoba, 12 in Saskatchewan with a population over 2,000, and 22 with a population from 1,000 to 2,000, and 87 in Alberta.

**Counties:** A complete survey coverage was undertaken for all 27 counties in Ontario, and for the 30 counties in Alberta, together with 12 out of 24 counties in Nova Scotia. The inflationary factor was used for the 12 remaining counties in this latter province.

**Townships:** In Ontario the survey covered 16 out of 39 townships with a population over 5,000, and 28 out of 292 with a population under 5,000. The inflationary factor was used for the remaining 23 and 264 townships in each of these population categories.

**Rural municipalities:** In Manitoba the survey covered 18 out of 105 rural municipalities and in Saskatchewan 30 out of 293. Again the inflationary factor was used for the remaining 87 municipalities in Manitoba and 263 in Saskatchewan.

la taille). De ces groupes homogènes, on a tiré au hasard des municipalités-échantillons qui sont elles-mêmes pondérées en fonction de la part du groupe dans l'agrégat provincial des dépenses totales.

#### Champ d'observation

Des questionnaires demandant des données préliminaires et des estimations ont été envoyés aux municipalités énumérées dans la base de sondage, laquelle comprend toutes les municipalités formant les communautés urbaines du Québec et les municipalités régionales de l'Ontario ainsi que les municipalités suivantes:

**Grandes villes:** Toutes les grandes villes des provinces et territoires à l'exception de quatre au Québec et de cinq en Colombie-Britannique.

**Petites villes:** Toutes les petites villes de l'Île-du-Prince-Édouard, du Nouveau-Brunswick, du Yukon et des Territoires du Nord-Ouest ainsi qu'un échantillon composé de la façon suivante: Terre-Neuve, 16 villes sur 115; Nouvelle-Écosse, 15 villes sur 38; Québec, 77 villes sur 208; Ontario, six des 23 villes comptant plus de 5,000 habitants et dix des 45 de moins de 5,000 habitants; Manitoba, sept villes sur 35; Saskatchewan, cinq des 17 villes de plus de 2,000 habitants et huit des 30 comptant de 1,000 à 2,000 habitants; Alberta, 15 villes sur 102.

En se fondant sur les questionnaires remplis par cet échantillon, on a appliqué le coefficient de gonflement approprié aux villes restantes de chaque province, dont le nombre était de 99 à Terre-Neuve, 23 en Nouvelle-Écosse, 17 de plus de 5,000 habitants et 35 de moins de 5,000 habitants en Ontario, 28 au Manitoba, 12 de plus de 2,000 habitants et 22 de 1,000 à 2,000 habitants en Saskatchewan et, enfin, 87 en Alberta.

**Comtés:** L'enquête a saisi les 27 comtés de l'Ontario et les 30 de l'Alberta ainsi que 12 des 24 comtés de la Nouvelle-Écosse. On a utilisé le coefficient de gonflement pour les 12 autres comtés de cette dernière province.

**Townships:** En Ontario, l'enquête portait sur 16 des 39 townships de plus de 5,000 habitants et sur 28 des 292 de moins de 5,000 habitants. On a recouru au coefficient de gonflement pour les 23 townships de la première catégorie et les 264 de la seconde.

**Municipalités rurales:** Au Manitoba, l'enquête a porté sur 18 des 105 municipalités rurales; en Saskatchewan, elle en a observé 30 sur 293. Une fois de plus, on a utilisé le coefficient de gonflement pour les 87 autres municipalités du Manitoba et les 263 autres de la Saskatchewan.

Districts: In Alberta four out of 18 municipal districts were covered by actual survey, with the inflation factor used for the remaining 14. In British Columbia 20 out of 38 districts were on the actual survey with the inflation factor being used for the remaining 18. In this province as well, complete survey coverage was maintained for the 28 regional districts, the two Sewerage the Drainage Districts and the four Water Districts. In the Yukon Territory the local improvement district of Watson Lake, and in Newfoundland the local improvement district of Labrador City were surveyed.

Block substitutions based on the latest Department of Municipal Affairs reports, were made for entities not covered by survey with data estimated according to trends and other contributing factors. The substitutions included the following municipal units:

Newfoundland - 36 local improvement districts, 135 communities and 11 rural districts;  
Prince Edward Island - 26 villages;  
Nova Scotia - 24 villages and five commissions;  
New Brunswick - 85 villages and 215 local service districts;  
Quebec - four cities, 131 towns, 373 municipalities, 482 parishes, 163 townships and 264 villages;  
Ontario - 121 villages, five separated towns, 35 towns in districts, 116 townships in districts and 14 improvement districts;  
Manitoba - 40 villages and 17 local improvement districts;  
Saskatchewan - 85 towns with a population under 1,000, 347 villages and nine local government districts;  
Alberta - 167 villages, 23 improvement districts and one special area board;  
British Columbia - five cities, ten towns and 59 villages;  
Yukon - two local improvement districts; and  
Northwest Territories - nine hamlets.

Basically, the method of sample inflation used was to apply to the sample data a factor derived from base data contained in Department of Municipal Affairs Reports. The contribution to sample group aggregates made by the sampled municipalities was established and applied to the data supplied by municipalities in each sample group.

The estimates derived from data provided by those selected as sample municipalities were added to the estimates provided by the self-representing municipalities to arrive at projected revenue and expenditure comparable in scope to the Department of Municipal Affairs base data. These estimates on a

Districts: En Alberta, quatre districts municipaux sur 18 ont été saisis par l'enquête; on a utilisé le coefficient de gonflement pour les 14 autres. En Colombie-Britannique, l'enquête a effectivement porté sur 20 des 38 districts; on a utilisé le coefficient de gonflement pour les 18 autres. Dans cette dernière province, l'enquête a porté sur 28 districts régionaux, les deux "Water and Sewerage Districts" et les quatre "Water Districts". Les districts d'amélioration locale de Watson Lake (Yukon) et de Labrador City (Terre-Neuve) ont été observés dans l'enquête.

Pour les administrations municipales exclues de l'enquête, on a estimé les totaux en se fondant sur les plus récents rapports du ministère des Affaires municipales et en tenant compte des tendances générales et d'autres facteurs. Ces imputations concernaient les administrations municipales suivantes:

Terre-Neuve - 36 districts d'amélioration locale, 135 agglomérations et 11 districts ruraux;  
Île-du-Prince-Édouard - 26 villages;  
Nouvelle-Écosse - 24 villages et cinq commissions;  
Nouveau-Brunswick - 85 villages et 215 secteurs des services locaux;  
Québec - quatre grandes villes, 131 petites villes, 373 municipalités, 482 paroisses, 163 cantons et 264 villages;  
Ontario - 121 villages, cinq villes détachées, 35 villes se trouvant dans des districts, 116 townships situés dans des districts et 14 districts d'amélioration locale;  
Manitoba - 40 villages et 17 districts d'amélioration locale;  
Saskatchewan - 85 villes comptant moins de 1,000 habitants, 347 villages et neuf districts d'administration locale;  
Alberta - 167 villages, 23 districts d'amélioration locale et un conseil de zone spéciale;  
Colombie-Britannique - cinq grandes villes, dix petites villes et 59 villages;  
Yukon - deux districts d'amélioration locale; et  
Territoires du Nord-Ouest - neuf hameaux.

Fondamentalement, la méthode utilisée pour gonfler l'échantillon consistait à multiplier les données de cet échantillon par un facteur tiré des données de base contenues dans les rapports des ministères des Affaires municipales. On a déterminé l'apport des municipalités choisies aux sommes des groupes de l'échantillon et on a appliqué aux données fournies par les municipalités pour chaque groupe de l'échantillon.

Les estimations établies à partir des données fournies par les municipalités échantillonnées ont été ajoutées à celles des municipalités autoreprésentatives afin d'en arriver à des projections des revenus et des dépenses qui aient une portée comparable à celle des données de base du ministère des Affaires municipales. Ces estimations fondées

provincial aggregate basis were then adjusted to compensate for portions of local government not represented by the survey and also to make the estimates comparable in scope with the "actual" series as published for 1975.

Where applicable, information on the revenue and expenditure of schools and hospitals was obtained by projecting the latest revenue and expenditure data received from the elementary and secondary section of the Education, Science, and Culture Division, and from the Hospital Section of the Health Division of Statistics Canada. In the case of provincial grants reference was made to the latest provincial public accounts and provincial estimates as a check on trend. The latest financial statements of municipalities were examined when necessary to check on overall coverage.

Capital expenditure data were derived from a survey as well, but a different estimating technique was employed. Although the same sample composition was observed, the estimates derived from sample municipalities were tempered by supporting information respecting capital expenditure programmes and works contract data.

Sixty-nine per cent of the questionnaires were completed and returned by the municipalities. The latest financial statements and budgets were used to complete a further 19% and 12% were completed by substitution, mainly by using the data that had been reported previously in the 1976 estimate questionnaires, and projecting an estimate for 1977.

Both the 1976 preliminary and the 1977 estimates were reported by municipalities on the same questionnaire form. With the reported figures covering both years coming from the same groups of municipalities, and with the estimating techniques for non-reporting municipalities the same for each year, the percentage change from 1976 to 1977 can be calculated with accuracy, as well as the magnitude of revenue and expenditure between the two years.

### Limitations

Although the specific items of revenue and expenditure are common to nearly all municipalities, their relative significance within the financial structure of each municipality differs to varying degrees. As an example, towns of a comparable size in a given area might all have "real property tax" and "licences and permits" revenue. The proportion of these items of revenue to their respective total revenue could vary from one town to another within the group - indeed, it

sur les agrégats provinciaux ont alors été ajustées de manière à tenir compte des éléments de l'administration locale exclus de l'enquête et de façon à aligner ces estimations sur la série des "chiffres réels" publiés pour 1975.

Quand c'était possible, on a obtenu les données sur les revenus et les dépenses des écoles et des hôpitaux en projetant les dernières données de ce genre fournies par la Section de l'enseignement primaire et secondaire, Division de l'éducation, des sciences et de la culture, et de la Section des hôpitaux, Division de la santé, à Statistique Canada. Pour les subventions provinciales, on a fait appel aux derniers comptes publics provinciaux et aux dernières estimations provinciales afin de vérifier la tendance. On a examiné les derniers états financiers des municipalités quand c'était nécessaire pour s'assurer que tout a été pris en compte.

Les données des dépenses d'investissement ont été tirées aussi d'une enquête, mais par une méthode d'estimation différente. Bien que la composition de l'échantillon ait été la même, on a pondéré les estimations établies pour les municipalités échantillonnées en s'appuyant sur des chiffres tirés des programmes d'investissement et des marchés de travaux.

Les municipalités ont rempli et renvoyé le questionnaire dans une proportion de 69 %. Pour 19 % des municipalités restantes, les renseignements voulus ont été tirés de leurs derniers états financiers et de leurs derniers budgets; on a procédé par substitution pour la dernière tranche de 12 % en utilisant surtout les données fournies dans le questionnaire sur les estimations de 1976 et en faisant des projections pour 1977.

Les données provisoires des municipalités pour 1976 et leurs estimations pour 1977 ont été fournies sur la même formule. À l'aide des chiffres déclarés pour ces deux années par les mêmes groupes de municipalités et en appliquant pour chaque année les mêmes techniques d'estimation aux municipalités n'ayant pas rempli de déclaration, nous pouvons calculer avec exactitude le taux de variation entre 1976 et 1977 ainsi que l'ordre de grandeur des revenus et des dépenses d'une année à l'autre.

### Limites

Bien que pour la très grande majorité des municipalités les postes des revenus et des dépenses soient identiques, leur importance relative au sein de la structure financière de chaque municipalité varie largement. Ainsi, dans une région donnée, les villes de taille comparable pourront avoir des revenus provenant des "impôts fonciers" et des "licences et permis", mais la proportion de ces postes par rapport à l'ensemble des revenus peut très bien varier d'une ville à l'autre; de fait, il est vraisemblable que la proportion respective

might be expected that the proportion of "licences and permits" would vary significantly. Therefore, the sample representation varies between items of revenue and expenditure and the quality of the estimates varies accordingly. Items which form a stable proportion of revenue or expenditure for a sample group of municipalities have a higher degree of accuracy or reliability than others. This inadequacy of the sample to be totally representative has been recognized and special attention was given during the compilation to minimize errors resulting from under-representation of this nature. Such errors of sampling vary from item to item; however, the sample element forms only a part of the provincial total and hence the error in the provincial total for a particular item is relatively insignificant.

#### General Revenue and Expenditure

General revenue and expenditure infers the "gross" concept which is used in this publication to conform with the publications for the other levels of government. General revenue includes all revenue regardless of source; general expenditure includes all current and capital expenditures without duplication. To avoid duplication, outlays for the acquisition of fixed assets are reflected at the point in time at which the fixed asset is acquired rather than when any loan in this respect is repaid (municipal accounting conventions treat the repayment of long-term loans as an expenditure in the year in which the revenue is provided for this purpose). Also as the "general" presentation constitutes a consolidation of the "current" and "capital" funds, the current expenditure item "contributions to the capital and loan fund" is eliminated as an inter-fund transfer.

General revenue, (Table 1) in this publication, includes all current revenue of all municipalities (including waterworks) school boards and the net contributions from municipal boards, together with capital grants from other levels of government respecting all capital expenditures of municipalities and their boards (except enterprises), special purpose boards and school boards. General expenditure (Table 3) comprises current and capital expenditures without duplication including the same coverage of the local government universe as the revenue. Because municipal boards are included only to the extent of their financing by municipalities, the revenues are understated by the amount of direct transfers to these entities from other levels of government and to a lesser extent by other incidental forms of revenue.

des "licences et permis" varie considérablement. La représentativité des postes de revenus et de dépenses de l'échantillon est donc sujette à varier, et la qualité des estimations s'en trouve touchée d'autant. Les postes qui constituent une part constante des revenus ou des dépenses pour un certain échantillon de municipalités comportent un degré plus élevé d'exactitude ou de fiabilité que les autres. Comme on savait que l'échantillon ne pouvait être totalement représentatif, on s'est efforcé, au moment d'exploiter les données, de réduire le plus possible l'effet des erreurs dues à ce manque de représentativité. Les erreurs d'échantillonnage de ce genre varient d'un poste à l'autre; toutefois, comme les données provenant de l'échantillon ne constituent qu'une partie du total provincial, l'erreur pour un poste donné est donc relativement négligeable au niveau de l'ensemble de la province.

#### Revenus et dépenses généraux

Les revenus et les dépenses généraux impliquent le concept de revenus et de dépenses "bruts" utilisé dans cette publication de manière à aligner les chiffres présentés ici sur les données figurant dans les publications consacrées aux autres échelons de l'administration publique. Les revenus généraux comprennent tous les revenus sans égard à la source; les dépenses générales comprennent toutes les dépenses courantes et toutes les dépenses d'investissement, prises en compte qu'une seule fois. Pour éviter qu'une même somme soit prise en compte deux fois dans le calcul des dépenses générales, le coût d'acquisition des immobilisations est pris en compte au moment de l'acquisition et non pas lors du remboursement d'un emprunt contracté à cette fin. (Par convention, la comptabilité municipale impute le remboursement d'une dette à long terme aux dépenses de l'année à laquelle les revenus correspondants sont affectés.) De même, comme les dépenses "générales" constituent une consolidation des dépenses "courantes" et des dépenses de "capital", le poste des dépenses courantes relatif aux contributions au fonds de capital et d'emprunt se trouve éliminé comme étant un transfert entre fonds.

Les revenus généraux (tableau 1) comprennent ici les revenus courants de toutes les municipalités (y compris le service des eaux) et des conseils scolaires, la contribution nette des comités municipaux et les subventions en capital des autres échelons de l'administration publique relative aux dépenses d'investissement des municipalités et des commissions (entreprises exceptées), des commissions spécialisées et des conseils scolaires. Les dépenses générales (tableau 3) comprennent les dépenses courantes et les dépenses de capital sans double compte en se basant sur le même univers que celui des revenus. Étant donné que les comités municipaux sont uniquement pris en compte dans la mesure où ils sont financés par les municipalités, on déduit des revenus les transferts directs à ces organismes faits par d'autres échelons de l'administration publique, et, à un degré moindre, les autres formes de revenus accessoires.

Special care must be taken if one is attempting to make a comparison of municipal statistics between provinces. Cases where the responsibilities differ are outlined below.

Newfoundland - The costs of police protection, health services and welfare programs are borne by the provincial government with very minor expenditures incurred by municipalities for these services. Education costs borne by municipalities are minimal and consist of amounts of property tax levied by special school tax authorities in a small number of locations throughout the province. Elementary and secondary schools are denominational, largely financed by the provincial government and are therefore not considered to be a part of local government.

New Brunswick - Revenue and expenditure relating to tax collections, justice, education, health, social welfare, assessment and elections are the responsibility of the provincial government and are very minor, if any, in these statistics.

Yukon Territory - Schools are operated by the territorial government and are therefore specifically excluded from these statistics.

Northwest Territories - The revenue and expenditure of the Yellowknife school districts are included in these statistics but all other schools are excluded as they are operated by the territorial government.

#### Review of Revenue and Expenditure 1976 and 1977

Revenue - Estimated general revenue raised by local governments from their own sources in 1977 increased by \$902.5 million over the corresponding preliminary data for the previous year. Higher tax revenue accounted for \$723 million of this increase. Transfers from other governments for 1977 are estimated at \$8,792 million or 48.1% of total general revenue. This represents an increase of \$676 million over the corresponding preliminary figures for 1976. Total estimated general revenue for 1977 of \$18,281.8 million increased by \$1,578.6 million over the total preliminary general revenue for 1976.

The main factors leading to this increase were as follows: in Ontario total estimated revenue for 1977 at \$7,293 million represented an increase of \$725 million over the 1976 preliminary data. Of this increase taxation revenue accounted for \$344 million, other revenue from own sources for \$68 million, specific purpose transfers for \$276 million and general purpose transfers for \$37 million.

Il faut se montrer particulièrement prudent, quand on veut comparer des statistiques municipales de différentes provinces. Nous mentionnons ci-après les cas où les changements de compétence diffèrent.

Terre-Neuve - Les coûts de la sûreté policière, des services de santé et des programmes de bien-être social sont assumés par l'administration provinciale, des dépenses peu importantes étant à la charge des municipalités pour ces services. L'éducation occasionne peu de frais aux municipalités; un impôt foncier est perçu par une commission spéciale constituée à des fins de taxe scolaire dans quelques endroits de la province. Les écoles primaires et secondaires sont confessionnelles et financées en grande partie par l'administration provinciale; elles ne sont donc pas considérées comme faisant partie de l'administration locale.

Nouveau-Brunswick - Les données sur les revenus et dépenses liés à la perception des impôts, à la justice, à l'éducation, à la santé, au bien-être social, à l'évaluation et aux élections relèvent de l'administration provinciale et sont minimales dans ces statistiques, quand elles n'en sont pas absentes.

Territoire du Yukon - Les écoles sont régies par l'administration territoriale; elles sont donc expressément exclues de ces statistiques.

Territoires du Nord-Ouest - Les statistiques de cette publication englobent les districts scolaires de Yellowknife, mais ne tiennent aucun compte des autres écoles puisqu'elles sont régies par l'administration territoriale.

#### Revue des revenus et dépenses pour 1976 et 1977

Revenus - Les estimations des revenus généraux tirés de leurs propres sources par les administrations locales en 1977 ont dépassé de \$902.5 millions les données préliminaires de l'année précédente. Les revenus fiscaux comptaient pour \$723 millions dans cette augmentation. Les transferts provenant d'autres administrations publiques sont évalués à \$8,792 millions pour 1977 et forment 48.1 % des revenus généraux. Cela constitue une hausse de \$676 millions sur les chiffres préliminaires correspondants pour 1976. Le total de \$18,281.8 millions au titre des revenus généraux estimatifs de 1977 dépasse de \$1,578.6 millions celui de 1976.

Voici les principaux facteurs de cette hausse: en Ontario, les revenus estimatifs totaux, qui atteignent \$7,293 millions pour 1977, représentent, par rapport aux données préliminaires de 1976, une augmentation de \$725 millions dont \$344 millions proviennent des revenus fiscaux \$68 millions, des autres revenus de sources propres, \$276 millions, des transferts à usage précis et \$37 millions, de transferts de nature générale.

In Quebec total estimated revenue for 1977 was \$4,879 million, an increase of \$324 million over the 1976 preliminary data. This increase was accounted for by an increase of \$152 million in taxes, \$35 million in other revenue from own sources, \$108 million in specific purpose transfers and \$29 million in general purpose transfers.

In Alberta total estimated revenue at \$1,855 million was an increase of \$236 million over the total preliminary revenue for 1976. This increase was made up of \$72 million in general taxes, \$34 million in other revenue from own sources, \$123 million in specific purpose transfers, and \$7 million in general purpose transfers.

In British Columbia estimated revenue for 1977 exceeded the 1976 preliminary figure by \$112 million accounted for by an increase of \$78 million in general taxes, \$21 million in other revenue from own sources, and \$13 million in transfers from other governments.

For 1977 estimated revenue of local governments in Nova Scotia increased by \$37 million over 1976, to a total of \$534 million. The additional revenue was derived from \$13.8 million in taxes, \$4.8 million from other revenue from own sources, \$9.5 million from specific purpose transfers, and \$8.9 million from general purpose transfers.

In Saskatchewan 1977 estimated revenue exceeded that of the 1976 preliminary by \$66.9 million due to an increase of \$31.9 million in taxes, \$8.4 million in other revenue from own sources, \$25 million in specific purpose transfers and \$1.6 million in general purpose transfers.

In Manitoba the increase of 1977 estimates over the 1976 preliminary data of \$41.3 million was accounted for by an increase of \$20.6 million in taxes, \$3.5 million in revenue from other sources, \$15.2 million from specific purpose transfers and \$2 million from general purpose transfers.

Expenditure - Estimated general expenditure for 1977 at \$19,576 million resulted in an increase of \$1,800 million over the corresponding preliminary data for 1976. Education expenditure at \$8,418 million represented an increase of \$681 million over the corresponding figure for 1976, and accounted for 43% of the estimated expenditure for 1977. Transportation and communications accounted for a further 11.9% of the estimated expenditure, environment for 8.3%, protection of persons and property for 8.1% and fiscal services for a further 8.1%, with somewhat lower expenditures on other functions.

Au Québec, les revenus totaux estimatifs de 1977 se chiffrent à \$4,879 millions, c'est-à-dire à \$324 millions au-dessus des données préliminaires pour 1976. Cette hausse est imputable aux revenus fiscaux (\$152 millions) aux autres revenus de sources propres (\$35 millions), aux transferts à usage précis (\$108 millions) et aux transferts de nature générale (\$29 millions).

En Alberta, le total de \$1,855 millions pour les revenus estimatifs représente une amélioration de \$236 millions par rapport aux chiffres préliminaires de 1976. Cette hausse provient des impôts généraux (\$72 millions), des autres revenus de sources propres (\$34 millions), des transferts à usage précis (\$123 millions) et des transferts de nature générale (\$7 millions).

Dans le cas de la Colombie-Britannique, les revenus estimatifs de 1977 excèdent de \$112 millions les chiffres préliminaires de 1976; cette poussée résulte des impôts généraux (\$78 millions), des autres revenus de sources propres (\$21 millions) et des transferts provenant d'autres administrations publiques (\$13 millions).

Pour 1977, les revenus estimatifs des administrations locales de la Nouvelle-Écosse atteignent \$534 millions. Il s'agit d'une augmentation de \$37 millions sur les chiffres de 1976, imputable aux impôts (\$13.8 millions), aux autres revenus de sources propres (\$4.8 millions), aux transferts à usage précis (\$9.5 millions) et aux transferts de nature générale (\$8.9 millions).

Les revenus estimatifs de la Saskatchewan pour 1977 se situent à \$66.9 millions au-dessus des chiffres préliminaires de 1976 par suite d'une augmentation des impôts (\$31.9 millions), des autres revenus de sources propres (\$8.4 millions), des transferts à usage précis (\$25 millions) et des transferts de nature générale (\$1.6 millions).

Au Manitoba, la progression de \$41.3 millions des chiffres estimatifs pour 1977 sur les données préliminaires de 1976 est imputable à une augmentation des impôts (\$20.6 millions), des autres revenus de sources propres (\$3.5 millions), des transferts à usage précis (\$15.2 millions) et des transferts de nature générale (\$2 millions).

Dépenses - Les dépenses générales sont estimées à \$19,576 millions pour 1977; c'est une hausse de \$1,800 millions sur les données préliminaires correspondantes de 1976. Les dépenses en éducation (\$8,418 millions) dépassent de \$681 millions le chiffre correspondant pour 1976 et interviennent pour 43 % des dépenses estimatives pour 1977. Les transports et les communications rendent compte d'une tranche de 11.9 % des dépenses estimatives, l'environnement, de 8.3 %, la protection des personnes et des biens, de 8.1 % et les services financiers, de 8.1 % également; les autres sortes de dépenses ont quelque peu diminué.

Ontario showed an increase in expenditure of \$788 million between the two years made up of an increase of \$356 million for education, \$111 million for transportation and communications, \$72 million for protection of persons and property, \$49 million for environment, \$47 million for fiscal services with smaller increases in other functions of expenditure.

The 1977 estimated expenditure in Alberta revealed an increase of \$384 million over the 1976 preliminary figures. This increase was accounted for by increases of \$88 million in education, \$73 million in transportation and communications, \$46 million in health, municipal hospitals, \$44 million in environment, and smaller amounts in other items of expenditure.

Quebec showed an increase in expenditure of \$235.6 million between the two years under review. Education expenditure increased by \$81.7 million, recreation and cultural services by \$54 million, fiscal services by \$42 million, and general government expenditure by \$32 million.

British Columbia's increase in expenditure between 1976 and the estimates for 1977 amounted to \$159 million accounted for by an increase of \$75 million in education, \$29 million in transportation and communications, \$22 million in environment, \$14 million in housing, \$15 million in fiscal services and smaller increases in other functions of expenditure, coupled with a decrease in the estimated expenditure for social welfare of local governments due to further assumption of responsibilities for this item of expenditure by the provincial government.

In Manitoba the overall increase between the two years is estimated at \$81 million accounted for by an increase of \$14.7 million in transportation and communications, \$16.8 million in environment, \$27.8 million in education and \$13.7 million in fiscal services; along with smaller increases in other functions.

In Nova Scotia the 1977 estimated expenditure exceeded the 1976 preliminary expenditure by \$72.3 million. This was accounted for by an increase of \$16.3 million in transportation and communications, \$22.5 million in environment, \$13.3 million in education, \$8 million in social welfare, and smaller increases in other functions of expenditure.

In Saskatchewan the increase in the 1977 estimated expenditure over the 1976 preliminary data amounted to \$60 million, accounted

En Ontario, les dépenses ont augmenté de \$788 millions d'une année à l'autre; cette hausse est imputable à l'éducation (\$356 millions), aux transports et communications (\$111 millions), à la protection des personnes et des biens (\$72 millions), à l'environnement (\$49 millions), aux services financiers (\$47 millions) et à des augmentations moins importantes des autres dépenses.

Les estimations des dépenses de l'Alberta en 1977 font voir une progression de \$384 millions sur les chiffres préliminaires de 1976, imputable à des augmentations dans les secteurs de l'éducation (\$88 millions), des transports et communications (\$73 millions), des services de santé, hôpitaux municipaux, (\$46 millions), de l'environnement (\$44 millions) et au relèvement plus faible des autres postes de dépenses.

Au Québec, l'augmentation de \$235.6 millions des dépenses entre les deux années observées se répartit comme suit: éducation, \$81.7 millions; loisirs et culture, \$54 millions, services financiers, \$42 millions et services d'administration générale, \$32 millions.

L'accroissement des dépenses de la Colombie-Britannique basé sur les chiffres de 1976 et les estimations de 1977 s'élève à \$159 millions et résulte d'augmentations aux postes de l'éducation (\$75 millions), des transports et communications (\$29 millions), de l'environnement (\$22 millions), du logement (\$14 millions), des services financiers (\$15 millions) et d'augmentations moins considérables dans d'autres secteurs. À cela s'ajoute une baisse du montant estimatif des dépenses consacrées aux services de bien-être social assurés par les administrations locales du fait que l'administration provinciale ait assumé des responsabilités supplémentaires émergeant à ce poste de dépenses.

Pour le Manitoba, l'augmentation générale des dépenses d'une année sur l'autre est estimée à \$81 millions et s'explique par des augmentations de \$14.7 millions pour les transports et communications, de \$16.8 millions pour l'environnement, de \$27.8 millions pour l'éducation et de \$13.7 millions pour les services financiers ainsi que par des augmentations plus limitées pour d'autres secteurs.

En Nouvelle-Écosse, les estimations des dépenses pour 1977 dépassent de \$72.3 millions celles de 1976. Cette progression résulte d'augmentations de \$16.3 millions pour les transports et les communications, de \$22.5 millions pour l'environnement, de \$13.3 millions pour l'éducation, de \$8 millions pour les services de bien-être social et d'augmentations moindres à d'autres postes de dépenses.

Pour ce qui est de la Saskatchewan, l'accroissement du chiffre estimatif des dépenses de 1977 par rapport aux données préliminaires de 1976 se

for by increases of \$35.1 million in education, \$11.8 million in health, mainly municipal hospitals, \$7.2 million in environment, \$7.0 million in recreation and culture, together with a slight decrease in transportation and communications, roads and streets.

#### Specific Purpose Transfers from Federal and Provincial Governments (Table 2)

Specific purpose transfers from other levels of government, comprising grants-in-aid and shared-cost contributions of both a current and capital nature, are presented in provincial aggregate form by function. The presentation conforms both in scope and detail with that shown in the publication Local Government Finance - Actual, Catalogue 68-204. In a few cases grants are identifiable by programme rather than by function. Grants under the Local Initiatives Programme were apportioned between recreational and cultural services, and environmental development services.

#### Debenture Debt Charges

The analysis of debenture debt charges shown in Table 4 is a presentation of the charges relative to the gross debenture debt of local government. Since the responsibility for education rests with the provincial government in New Brunswick there are no debenture debt charges for schools in this province.

#### Economic Classification

In Tables 5, 6, 7 and 8 the revenue and expenditures of local government are classified in accordance with the economic analysis concepts used in the System of National Accounts - Income and Expenditure. In this system revenues are identified by type and expenditures by economic object.

#### Urban Regions

The following table indicates those municipalities which form part of urban regions. The data presented for each of these regions consists of the transactions of those municipalities and of other boards and commissions whose services were provided within the region. School board revenues, excluding taxation and their expenditures were allocated to the regions on the basis of population in those areas where data on the estimated revenues and expenditures of individual boards within a region were not available. The same procedure was followed in allocating capital expenditures of school boards to urban regions.

chiffre à \$60 millions; il découle d'augmentations dans les secteurs de l'éducation (\$35.1 millions), de la santé, principalement dans les hôpitaux municipaux, (\$11.8 millions), de l'environnement (\$7.2 millions) et des loisirs et de la culture (\$7.0 millions) conjuguées à une faible baisse du secteur des transports et communications (voirie).

#### Transferts à usage précis provenant des administrations fédérales et provinciales (tableau 2)

Les transferts à usage précis provenant des autres échelons de l'administration publique au titre des dépenses courantes et d'investissement (y compris les subventions et les contributions aux programmes conjoints) sont présentés par fonction au niveau des agrégats provinciaux. La présentation est conforme en étendue et en détail à celle qui figure dans la publication n° 68-204 au catalogue, Finances des administrations locales - Chiffres réels. Quelques subventions relèvent d'un programme et non pas d'une fonction. Les subventions au titre des "Programmes d'initiatives locales" sont réparties entre les services culturels et des loisirs et les services d'urbanisme, d'aménagement et de mise en valeur du territoire.

#### Frais du service de la dette obligataire non garantie

L'analyse du service de la dette obligataire non garantie, au tableau 4, présente les frais ayant trait à la dette obligataire non garantie des administrations locales. Étant donné qu'au Nouveau-Brunswick l'éducation relève de l'administration provinciale, il n'y a pas de frais du service de la dette obligataire non garantie pour les écoles de cette province.

#### Classification économique

Dans les tableaux 5, 6, 7 et 8, on a classé les revenus et dépenses des administrations locales selon les concepts économiques de la comptabilité nationale - revenus et dépenses. Dans ce système, les revenus sont identifiés par type et les dépenses, par article économique.

#### Régions urbaines

Le tableau suivant énumère les municipalités qui font partie des régions urbaines. Les données fournies pour chacune de ces régions recouvrent les transactions de ces municipalités et des autres comités, commissions et conseils qui ont assuré des services dans cette région. Les revenus des commissions scolaires, à l'exclusion des taxes, et leurs dépenses ont été imputés aux régions proportionnellement à la population des secteurs pour lesquels nous ne possédions pas de données sur les revenus et les dépenses estimatifs de chaque commission scolaire d'une région donnée. Les immobilisations des commissions scolaires ont été imparties de la même façon aux régions urbaines.

So far as possible in Tables 9 and 11, gross revenue and expenditure of urban regions is presented on a basis consistent with the provincial aggregates. Exceptions to this consistency occur where inter-municipal transfers can be almost entirely eliminated on consolidation for the provincial aggregate, but only partially eliminated in the aggregates for the selected urban regions.

Where adjustments were required to provincial aggregate data, to offset known bias in the estimates, a comparable adjustment was made to the selected urban regions on a judgment basis.

Table 10 presents specific purpose transfers from the Federal and Provincial governments functionalized by urban regions, similar to that presented in total for all municipalities in Table 2.

Dans la mesure du possible, dans les tableaux 9 et 11, les revenus et les dépenses bruts des régions urbaines sont présentés sur une base conforme aux agrégats provinciaux. Il y a des exceptions lorsque les transferts inter-municipaux peuvent être presque entièrement éliminés lors de la consolidation des agrégats provinciaux, mais seulement en partie pour l'agrégat relatif à certaines régions urbaines.

Lorsqu'il devenait nécessaire de rajuster les données de l'agrégat provincial, pour contrebalancer une inexactitude connue dans les estimations, on a procédé à un rajustement comparable de certaines régions urbaines à partir d'une estimation.

Le tableau 10 présente par fonction les transferts à usage précis des administrations publiques fédérale et provinciale comme le tableau 2 le fait pour les totaux de toutes les municipalités.
